1,693,286. GANG CONDENSER AND METHOD OF ADJUSTING SAME. EDWIN S. PRIDHAM, Oakland, and DONALD K. LIPPINCOTT, Alameda, Calif., assignors to The Magnavox Company, Oakland, Calif., a Corporation of Arizona. Filed Mar. 17, 1926. Serial No. 95,169. 2 Claims. (Cl. 175—41.5.)

1. In a condenser, a plurality of stators, each formed of spaced plates, a cross-plate at each end of each stator section, a shiftable bar carried by each cross-plate, bolts connected to the shiftable bar and extending through slots in the cross-plate, a frame for the stator sections having openings through which said bolts extend, and means insertable through the frame to engage the cross-plates for shifting the same laterally to permit adjustment during assembly.

---

1,693,287. OFFICE-WINDOW PROTECTOR. JOSEPH H. SPEIER, Los Angeles, Calif. Filed Feb. 11, 1926. Serial No. 87,556. 3 Claims. (Cl. 20—1.01.)

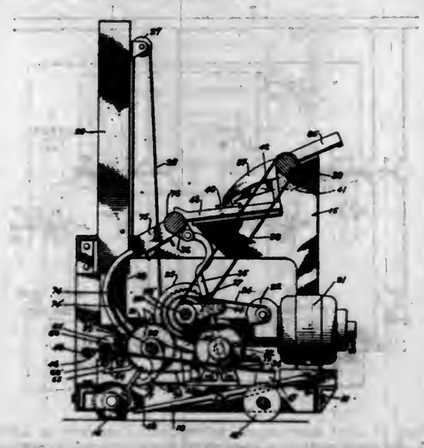
1. A device of the class described, comprising a straight wall having an opening therethrough, a mirror adjacent the opening and extending outwardly, from one side thereof over the opening at about 45 degrees to the plane of the wall, a grating connecting the outer end of said mirror and the other side of said opening and arranged substantially perpendicular to the wall whereby a person on one side of said opening may see and converse with a person on the other side and at the same time be amply protected from a dangerous weapon carried by said last named person.

---

1,693,288. PARKING DEVICE FOR AUTOMOBILES. BROOKS WALKER, Piedmont, Calif. Filed May 3, 1927. Serial No. 188,429. 20 Claims. (Cl. 180—1.)

1. The combination with the transmission shaft on a motor driven vehicle of a jack shaft, a pivotal support for the shaft adjacent one end thereof, permitting said jack shaft to occupy a raised position parallel to the traction surface or a lowered position with one end thereof in contact with the traction surface, a roller secured on the opposite end of the shaft, a toggle lever pivotally connected at one end of the jack shaft at a point adjacent the roller, a pivotal connection between the opposite end of the toggle lever and the axle assembly, engine power actuated means whereby the toggle lever is extended or retracted so as to swing the jack shaft about its pivotal support from a raised position to a lowered position or vice versa and means whereby a driving connection between the transmission shaft and the jack shaft is automatically connected or disconnected during pivotal movement of the jack shaft.

---



1,693,289. RIFLE-STOCK-BUTT CARTRIDGE BELT AND COUNTERSUNK RIFLE-SLING LOOP. ROSCOE F. WARREN, Los Angeles, Calif. Filed Dec. 15, 1927. Serial No. 240,173. 1 Claim. (Cl. 42—71.)

In the art described, a gun having a stock butt with a shallow recess on one side, a base formed of leather, a strip of flexible material formed into a series of parallel loops, the ends of said material being stitched to the leather base and said material between adjacent loops being stitched to said base, the loops in the base forming a series of parallel open ended pockets adapted to hold cartridges, and said base being inserted in the recess and secured therein.

---

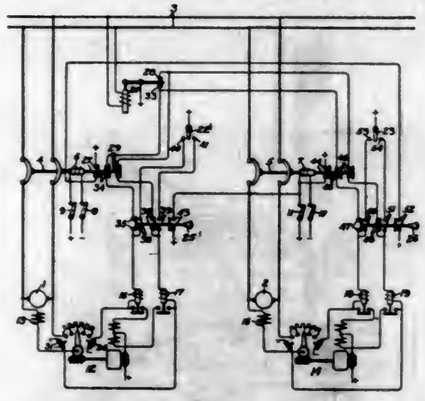
1,693,290. FLOOR-NAILING MACHINE. ALVIN A. FAWCETT, San Francisco, Calif., assignor of one-fourth to Hawley S. Bradshaw, Piedmont, Calif., and one-fourth to Charles A. Bradshaw and one-fourth to William J. Swart, Oakland, Calif. Filed Oct. 3, 1927. Serial No. 223,582. 6 Claims. (Cl. 1—46.)

1. In a floor nailing machine, the combination of a frame adapted to travel over the nailed surface, a motor for driving said frame, a driving wheel for said frame in contact with the nailed surface, a cant-hook device engaging the flange of said driving wheel, a cam driven by said motor adapted to engage said cant-hook device to advance said frame a predetermined distance during one revolution thereof, and a brake mechanism for holding said frame stationary when said cam is in an inoperative position.

---

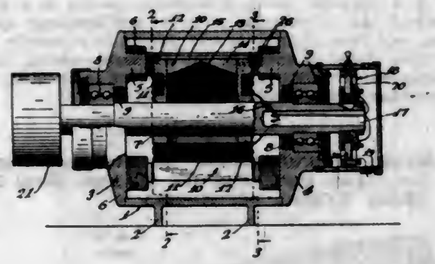
1,693,291. CONTAINER AND MANUFACTURE THEREOF. ALBIN L. FORSBERG, Chicago, Ill., assignor to The Thomson & Taylor Co., a Corporation of Illinois. Filed Sept. 24, 1927. Serial No. 221,735. 5 Claims. (Cl. 113—116.)

1. A container having a discharge opening in a wall thereof, and a removable cover for said discharge opening, said cover attached to said wall by an outwardly extending flange surrounding the discharge opening, said flange projecting into and tightly embraced by an outwardly extending flattened hollow ridge in the cover.



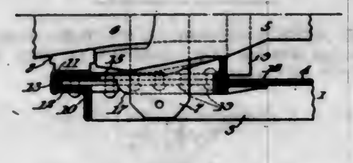
---

1,693,292. TUNING HAMMER. WILLIAM FRAUNBERGER, Los Angeles, Calif. Filed Oct. 21, 1926. Serial No. 143,200. 2 Claims. (Cl. 84—459.)



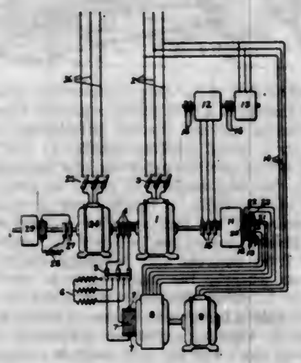
1. A tuning hammer comprising a head having a socket in one end and an elbow on the other, and an operating shank connected to the elbow at one side of the head and extending substantially at right angles from the elbow.

1,693,293. CONTROL SYSTEM. WILLIAM N. GITTINGS, Springfield, Pa., assignor to General Electric Company, a Corporation of New York. Filed Dec. 23, 1927. Serial No. 242,232. 4 Claims. (Cl. 171—118.)



1. In combination, a load circuit, a source of current connected to said load circuit, regulating means for controlling the output of said source, control means responsive to a predetermined condition of the load circuit for controlling said regulating means, other control means for controlling the operation of said regulating means to vary the output of said source, a second source of current, automatic switching means for connecting said second source to said load circuit, switching means for placing the regulating means of the first mentioned source under the control of either of said control means and for simultaneously effecting the operation of said automatic switching means to connect the other source to the load circuit when said regulating means is placed under the control of said other control means.

1,693,294. ELECTRIC MOTOR. CARLOS A. GUTERRES, Santa Monica, Calif., assignor of one-third to Ernest F. Iverson, Los Angeles, Calif., and one-third to Dale M. Gingras, Santa Monica, Calif. Filed Dec. 29, 1926. Serial No. 157,691. 9 Claims. (Cl. 172—36.)

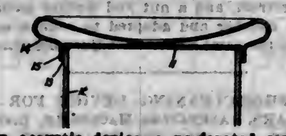


1. An electric motor comprising in combination a fixed structure having an armature shaft rotatably mounted therein, a plurality of armature poles arranged radially with windings on radial cores, two sets of a plurality of field poles secured to the fixed structure, the two sets of field poles being spaced apart and extending towards each other and having winding thereon, the armature poles being rotatably mounted on the shaft between the two sets of field poles.

1,693,295. COMBINED STRIKING CASTING AND FRONT DRAFT LUG. CLEON M. HANNAFORD, Richmond, Va., assignor to Car Devices Company, Richmond, Va., a Corporation of Virginia. Filed June 1, 1925. Serial No. 34,046. 4 Claims. (Cl. 213—56.)

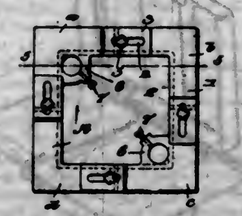
1. A combined one-piece striking casting and front draft lugs, adapted to be secured as a unit in place on a car, the lugs provided with longitudinal slots to receive a coupler key, said slots serving to limit the inward travel of the said key and to receive the contact of the key when the draft gear has gone solid in buff, said draft lugs having rear extensions engaged with the center sill slots, in combination with center sill members having longitudinal slots aligned with the slots in the lugs and of greater length.

1,693,296. SPEED-CONTROL AND FREQUENCY-CONVERTER SET. JOHN I. HULL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 6, 1924. Serial No. 754,405. 2 Claims. (Cl. 172—274.)



1. In combination, a power line, an induction machine connected to said power line, a regulating machine concatenated with said induction machine, a completely separately excited field winding on said regulating machine, and means for supplying excitation energy from said power line to said field winding comprising apparatus which is responsive to the frequency changes of said line, but nonresponsive to other electrical changes of said line which are apt to produce self-excitation of said concatenated combination.

2. In combination, a power line, an induction machine having its primary connected to said line, a regulating machine concatenated with the secondary of said induction machine, a completely separately excited field winding on said regulating machine, and means for supplying excitation energy from said power line to said field winding comprising a frequency changer and a synchronous motor generator set, said means being arranged to be responsive to the frequency changes of said line, but nonresponsive to the voltage changes thereof.

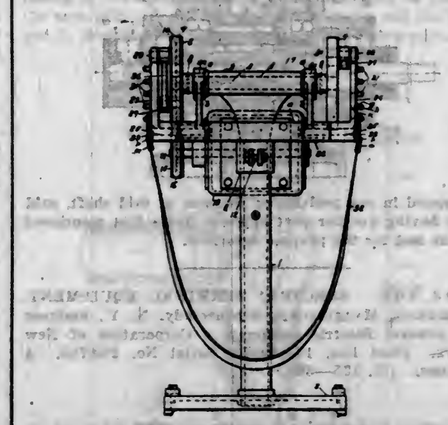


1,693,297. ACOUSTIC DEVICE. JOSEPH HUTT and GEORGE H. BIRD, Coventry, England, assignors to General Electric Company, a Corporation of New York. Filed May 11, 1926, Serial No. 108,355, and in Great Britain June 8, 1925. 5 Claims. (Cl. 181—31.)

1. In an acoustic device, a perforated cover having a depending flange, and a flanged ring supported within said cover by frictional engagement with the depending flange.

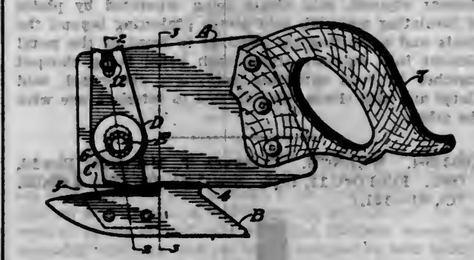
1,693,298. RADIO MAST HOLDER. EMANUEL INGHAM, Washington, D. C. Filed Apr. 16, 1924. Serial No. 706,861. 7 Claims. (Cl. 72—108.)

7. A device for supporting a wire from a chimney or the like, comprising an angular frame constructed to rest on the top edge of the chimney and engage two adjacent side walls thereof substantially throughout their length, whereby the strain is distributed over a large area, and wire anchoring means carried by said frame.



1,693,299. CLINICAL THERMOMETER. WILLIAM H. JOHNS, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 8, 1926. Serial No. 107,767. 4 Claims. (Cl. 73—52.)

1. In combination with a thermometer having a liquid in a bore, a receptacle with a gas under pressure, means for connecting the receptacle with the bore of the thermometer, and a valve in the receptacle for controlling the application of the gas from the receptacle to the liquid in the bore to drive the liquid down the bore.

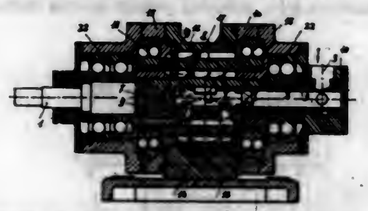


1,693,300. MASSAGING MACHINE. FRANK W. KNOTT and EMERY GABELUS, Detroit, Mich. Filed Nov. 16, 1927. Serial No. 233,005. 6 Claims. (Cl. 128—33.)

1. A massaging machine adapted for producing artificial massaging through a flexible applicator belt, comprising a rigid supporting frame, having a double crank mechanism rotatably mounted at the top end thereof, means connected thereto for causing rotations of the crank mechanism, a swinging pivotal bearing frame at-

tached to the said supporting frame and free to swing upon its pivots, a pair of applicator arms pivotally attached to the said pivotal bearing frame and means for connecting each of the said applicator arms to one of the cranks in a manner to cause an oscillating movement of the said applicator arms in opposite directions, as the double crank mechanism is rotated.

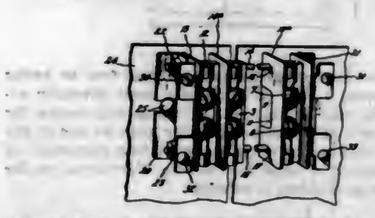
1,693,301. SHEARS. CARL ANDREW KOPP, Sioux City, Iowa. Filed July 16, 1926. Serial No. 122,863. 2 Claims. (Cl. 30—13.)



1. In a portable power driven cutting tool, a saw frame, a handle at one end of the frame, said frame provided with an offset shoe at its lower edge, said shoe being formed with an inwardly extending throat, a stationary blade secured to the shoe so that its cutting edge will project obliquely above the top edge of the shoe, and within the throat, an elongated cutting member mounted for vertical movement at its intermediate portion to the frame, guide means at the upper end of said member, the lower end of said member being diagonal and beveled, and further adapted for complementary cutting action with the stationary blade.

1,693,302. ROTARY MACHINE. JEAN LAVERGNE, Paris, France, assignor to Rene Forest, Paris, France. Filed Apr. 4, 1927, Serial No. 180,953, and in France Apr. 7, 1926. 3 Claims. (Cl. 230—157.)

1. In mechanism of the character set forth, the combination of a stationary cylinder, a concentric hollow shaft rotatable therein, a stationary sleeve in said shaft, and an eccentric tubular member rotatable within said cylinder and surrounding said shaft, said member having



a longitudinal opening, said shaft having a vane extending through said opening into engagement with the wall of said cylinder, ports in the shaft and sleeve adapted to

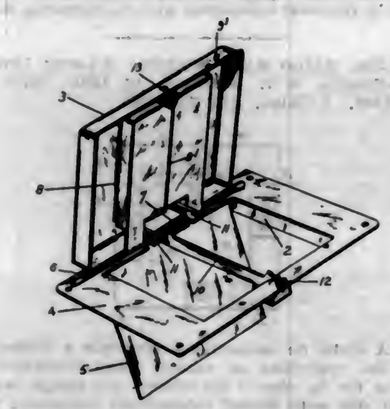
correspond in one position of rotation of said shaft, said sleeve having another port opposite to its first mentioned port, as and for the purpose described.

---

1,693,303. ELECTRIC TERMINAL EQUIPMENT. FREDERICK MACKINTOSH, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 13, 1927. Serial No. 239,783. 4 Claims. (Cl. 175—369.)

1. A panel of terminal elements adapted to be used for cross-connecting circuit conductors, said panel having a number of units each consisting of a metal element imbedded in a block or cleat of insulating material with the element exposed, said cleats being separated by plates of insulating material, said plates projecting beyond the cleats and separating the spacings in front of the metal element into separate stalls, each panel being clamped together by rods extending transverse the panel, said plates and said cleats being formed to interlock one with the other.

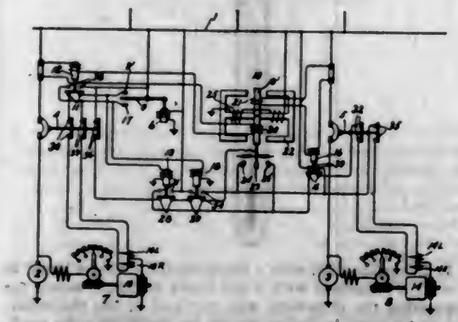
---



1,693,304. WRENCH. CLARENCE T. MARTHEY, Bowdil, Ohio. Filed Oct. 11, 1926. Serial No. 140,874. 1 Claim. (Cl. 81—121.)

A tool of the character specified, comprising a member adapted to be detachably fitted at one end to a stem and externally screw-threaded and terminating at its opposite end in an eye, a companion member having an eye and an outer shoulder, an open coil spring enclosing adjacent end portions of the members, an S link within the spring connecting the members and readily disengageable therefrom, and a nut and washer mounted upon the threaded member and adapted to confine said spring and maintain the same under an adjustable tension.

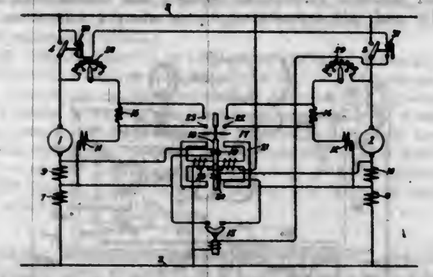
---



1,693,305. SHOE-CLEANING DEVICE FOR USE ON MOTOR CARS. ALEXANDER MACDONALD, Inverell, New South Wales, Australia. Filed May 4, 1927. Serial No. 188,801. 4 Claims. (Cl. 280—164.)

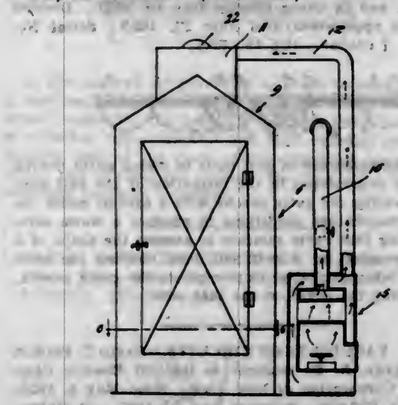
1. A shoe cleaning device for use on motor cars, comprising, in combination, a box having a hinged drop bottom and a hinged lid, means connected to the lid for permitting the opening and effecting the closing of the drop bottom synchronously with the lid, a shoe cleaning brush within the box, means for mounting the box on the running board of a motor car, and means for releasably holding the lid, together with the drop bottom, in closed position.

---



1,693,306. REGULATING SYSTEM. GORDON R. MCDONALD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 5, 1926, Serial No. 86,328. Renewed May 26, 1928. 16 Claims. (Cl. 171—312.)

1. In a regulating system, an electric circuit, a plurality of dynamo electric machines connected in parallel and supplying current to said circuit, voltage responsive means, regulating means associated with each machine and arranged to be controlled normally by said voltage responsive means, and means responsive to the relative outputs of said machines arranged to control one of said regulating means when said one of said regulating means is not being controlled by said voltage responsive means.

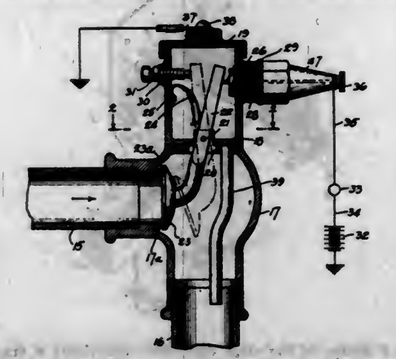


1,693,307. REGULATING SYSTEM. GORDON R. MCDONALD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 5, 1926. Serial No. 86,329. 13 Claims. (Cl. 171—312.)

1. In a regulating system, two direct current generators connected in parallel, a field circuit for each generator, current limiting means in each field circuit, and a polarized relay connected and arranged so that when the current output of one of sad generators is too great relatively to the current output of the other generstor, said polarized relay occupies a position to decrease the amount of current limiting means in the field circuit of said other generator and when the current output of said one of said generators is too small relatively to the current output of said other generator, said polarized relay occupies a position to decrease the amount of current limiting means in the field circuit of said one of said generators.

---

1,693,308. GARMENT DEODORIZER. PAUL MERKOWITZ, Malta, Mont. Filed Oct. 28, 1927. Serial No. 229,489. 3 Claims. (Cl. 34—19.)



1. In a deodorising apparatus of the class described, a garment receiving cabinet provided with a false bottom spaced from the main bottom and having a depressed central portion equipped with an opening, a screen overlying said false bottom, a manifold carried by said cabinet and connected with the space existing between the false bottom and the main bottom, said manifold being comparatively wide at its bottom and gradually decreasing in width toward the top and merging into a suction fan housing, a fan rotatable in said fan housing, means in said cabinet for supporting garments, and means for supplying hot air to said cabinet to be drawn downwardly through the same, through the opening in said false bottom, and into said manifold.

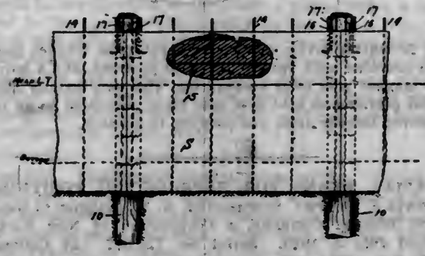
---

1,693,309. SIGNALING DEVICE. ARTHUR L. METTLER, San Pedro, Calif., assignor of one-half to Hugh E. McCarthy, Long Beach, Calif. Filed Apr. 28, 1924. Serial No. 709,634. 2 Claims. (Cl. 200—81.)

1. An electrical circuit controller for the fluid circulating systems of engines comprising in combination a connecting coupling adapted to form part of a fluid conduit, a casing secured upon the coupling and provided with a contact, said coupling and casing having registering openings, ears on the coupling extending through the opening in the casing, a lever pivotally mounted intermediate its ends on the ears with one end disposed in the casing and the other end in the coupling, means engaging the casing portion of

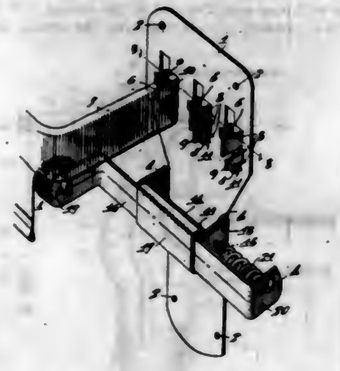
the lever for normally urging the latter into engagement with the contact, a head on the coupling portion of the lever having a deflecting lip and adapted under the action of water flowing through the conduit to move the lever out of engagement with the contact, and screw means adjustable in the casing, and engageable by the lever for limiting the movement of the lever under the action of the water.

---



1,693,310. BUTTON FASTENER. CHARLES H. MILLER, Detroit, Mich. Filed Feb. 27, 1928. Serial No. 257,178. 9 Claims. (Cl. 24—103.)

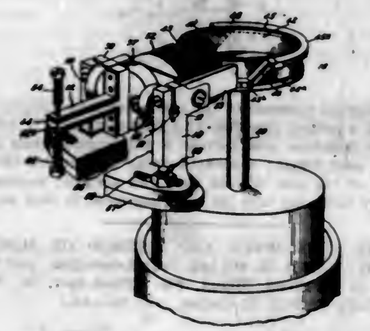
1. A button fastener of the class described, adapted for use with a button, comprising: a frame; means for mounting said frame on said button; a pin longitudinally movable on said frame; a socket-bearing portion for the reception of the end of said pin; and resilient means for normally retaining said pin in engagement in said socket.



---

1,693,311. SEA WALL AND METHOD OF MAKING SAME. ROBERT M. MILLER, Fort Lauderdale, and HERBERT D. HODGSON, Miami, Fla. Filed Nov. 30, 1925. Serial No. 72,311. 11 Claims. (Cl. 61—49.)

5. A sea wall comprising wood piling, a concrete slab extending between such piling and the water, means independent of the sea bottom supporting such slab, including means suspending the slab at the top from the tops of the adjacent pilings.

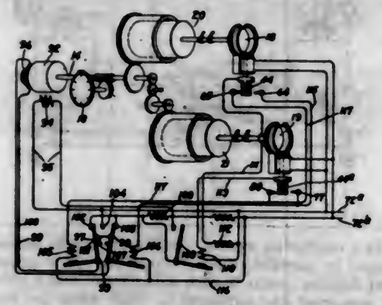


1,693,312. CURTAIN ROD AND SHADE HOLDER. ELMER E. MOORE, Martins Ferry, Ohio, assignor of forty-nine per cent to James Sweeney, Martins Ferry, Ohio. Filed Apr. 13, 1927. Serial No. 183,508. 5 Claims. (Cl. 156—23.)

1. A device of the class described comprising a bracket body of sheet metal, curtain rod mounting lugs projecting from the sheet metal body including a main lug body insertable into the end of the curtain rod, and a lateral lug cut and bent out from the main lug body and bent at the free end to provide a rod engaging spring end to frictionally engage a rod portion when inserted between it and the said main lug body.

---

1,693,313. ELECTRICAL CONTROL DEVICE. EDWIN J. MURPHY, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Original application filed July 9, 1924, Serial No. 725,077. Divided and this application filed Feb. 9, 1927. Serial No. 167,041. 8 Claims. (Cl. 175—336.)



1. A control device comprising a rotatable magnet pole piece provided with axially displaced portions, and a movable magnet pole piece cooperating with said axially displaced portions as said first pole piece is rotated so as to be moved thereby from one position to another.

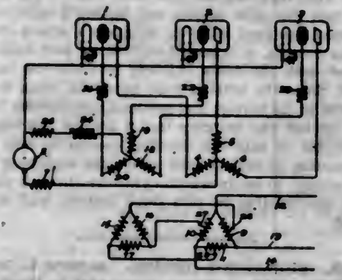
---

1,693,314. MEANS FOR REPRODUCING POSITION. EDWIN J. MURPHY, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 9, 1924. Serial No. 725,077. 24 Claims. (Cl. 172—239.)

1. Means for reproducing position comprising in combination with a controlling movable object and a driven movable object, a motor for driving said driven object, control means for said motor, an electrical system for reproducing angular motion including an electrical transmitting device driven by said controlling object and an electrical reproducing device provided with a rotor member, electrical connections between said transmitting device and said reproducing device whereby said rotor is

caused to follow the movements of said controlling object, and a magnetic connection between said rotor and said control means for actuating said control means upon movement of said controlling object so as to cause the motor to drive the driven object into positional agreement with the controlling object.

---



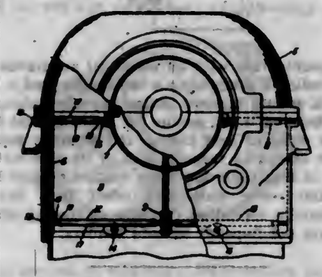
1,693,315. METHOD OF MAKING GOLF BALLS AND ARTICLES PRODUCED THEREFROM. ALBERT ERNEST PENFOLD, Birmingham, England, assignor to The Dunlop Rubber Company, Limited, London, England. Original application filed Nov. 4, 1922, Serial No. 599,067, and in Great Britain Dec. 10, 1921. Divided and this application filed July 27, 1925. Serial No. 46,463. 7 Claims. (Cl. 18—55.)

1. The manufacture of golf balls in which gutta percha or the like is employed in the formation of the ball comprising, treating the gutta percha with a solvent under the required temperature conditions to produce a warm solution, causing this warm solution to assume the shape of a covering member for a golf ball core, chilling the solution after being so shaped to precipitate the gutta percha, and moulding the cover on the said core.

---

1,693,316. VACUUM-TUBE CIRCUITS. DAVID C. PRINCE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 4, 1923, Serial No. 636,696. Renewed Nov. 30, 1927. 23 Claims. (Cl. 175—363.)

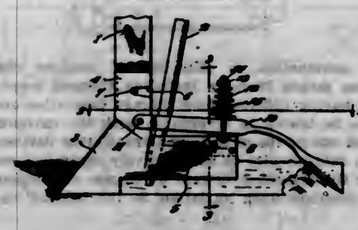
1. The combination in a system of electrical distribution of a plurality of electron discharge valves having plate and control circuits, a source of direct current connected



to the plate circuits of said valves, each of the plate circuits of said valves including a primary winding of a transformer, secondary transformer windings associated with said primary windings, and means for impressing upon the control circuit of each valve a control potential which leads the potential of the corresponding plate circuit secondary winding.

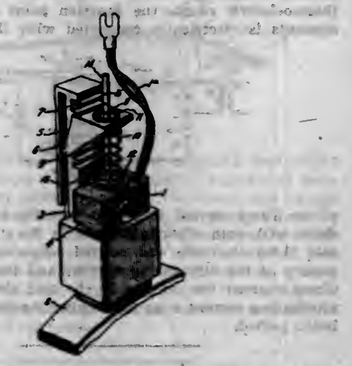
23. The combination of an electron discharge device provided with a cathode and anode and with a grid arranged to control the current transmitted between said cathode and anode, a transformer comprising a plurality of windings one of which is connected between said cathode and anode, and means connected between another of said windings and said grid for applying to said grid a potential which has its phase varied in accordance with the load of said transformer.

---



1,693,317. METHOD OF BRACING CASING STRUCTURES FOR ELASTIC FLUID TURBINES AND THE LIKE. CHESTER S. RICE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 1, 1927. Serial No. 195,835. 2 Claims. (Cl. 29—148.)

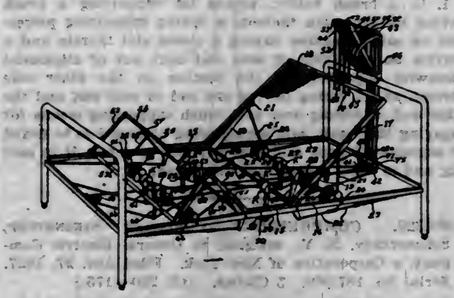
1. The method of providing a brace between walls of a cast casing structure having spaced walls, which comprises assembling the brace by inserting studs in the ends of a hollow tube with the stud ends exposed, casting the exposed ends of the studs of the assembled brace in said walls, and welding the studs to the tube after the casing structure has been annealed.



---

1,693,318. MOISTURE PRESERVER. SANDERS P. SHELL, Anna, Tex. Filed May 9, 1927. Serial No. 190,068. 3 Claims. (Cl. 111—85.)

1. A planter attachment comprising an opener, spaced wings extending rearwardly from the opener, a yoke connecting the rear ends of the wings, coverers extending over and limited in their downward movement by the wings and pivoted at their forward ends to the opener and having their rear ends curved rearwardly and downwardly, rods extended upwardly from the rear ends of said wings, plates adjustable upon the upper ends of the rods, and springs seated upon the coverers and retained in place by the plates applied to the upper ends of the said rods.

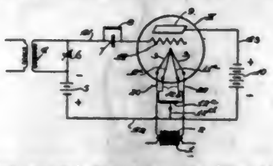


1,693,319. TENSION INDICATOR FOR BRUSH HOLDERS. HARVEY O. SIMMONS, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 1, 1926. Serial No. 152,032. 2 Claims. (Cl. 171—324.)

1. In a dynamo-electric machine, a brush holder comprising a body having a guideway for the brush, a coil spring arranged with its axis in alignment with the guideway for urging the brush against the current collecting device of the machine, an adjustable plate secured to said body and engaging said spring for compressing the same against the brush, said plate having an opening therein coaxial with said spring, and a graduated extension carried by the brush and projecting through said opening for indicating the pressure exerted by said spring on the brush.

---

1,693,320. BED ATTACHMENT. TURNER B. SMITH and JAMES E. BIXLER, Wilmington, Calif. Filed May 9, 1927. Serial No. 189,996. 4 Claims. (Cl. 5—69.)



1. A bed attachment comprising a frame pivotally supported to permit elevation and lowering thereof, a shaft, arms fixed to the shaft and engageable with the frame to effect lowering or elevation of the frame as the arms are moved in one direction or the other, a second shaft, a reel fixed to the second shaft, a cable on the reel, a lever to which said cable is connected, a clutch member on the first shaft and on which said lever is supported to effect rotation of the shaft when the lever is actuated, and means operable from a remote point for rotating the second shaft in one direction to wind the cable on said reel and thereby effect operation of said lever.

---

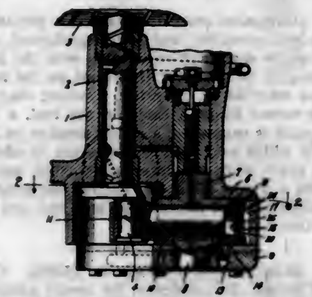
1,693,321. ELECTRON-DISCHARGE TUBE. CHARLES SPARTH, Chicago, Ill., assignor, by mesne assignments, to Raytheon Manufacturing Company, Cambridge, Mass., a Corporation of Delaware. Filed June 4, 1926. Serial No. 113,596. 2 Claims. (Cl. 250—27.)

1. In combination with an electron discharge device comprising an evacuated envelope, and having an anode and an incandescent filament constituting a cathode, and a third electrode, the cathode being in circuit with a

source of alternating current, the third electrode being in circuit with a source of direct current for receiving therefrom a negative bias; a conductor from the positive pole of the direct current source to a neutral point in the cathode-energizing circuit, said conductor containing a thermoelectric couple the junction point of whose metal elements is electrically connected with the positive pole

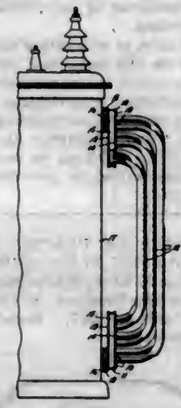
of the direct current source; a capacity and resistance in shunt with each other interposed in the circuit containing said third electrode and related respectively to the frequency of the alternating current and the voltage of the direct current for causing in the said circuit due to the alternating current a lag substantially relative to the oscillation period.

---



1,693,322. BRUSH HOLDER. MYLES J. STANTON, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Mar. 2, 1927. Serial No. 172,133. 2 Claims. (Cl. 171—324.)

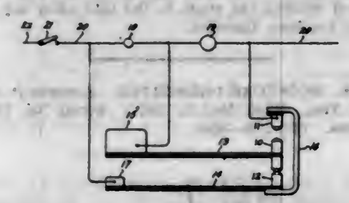
1. In a brush holder, means for supporting a brush having an extension thereon, a spring supporting projection on said extension having a closed slot therein and a portion on each side of said slot bent out of alignment therewith oppositely to the portion on the other side thereof, and a spring having one end in said slot and the other end extending over said brush supporting means for engaging the brush, said spring being arranged to be flexed by engagement with said bent portions to retain it in said slot and to exert pressure on the brush.



---

1,693,323. COMPRESSOR. CHRISTIAN STEENSTRUP, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 27, 1927. Serial No. 187,069. 5 Claims. (Cl. 230—175.)

1. A compressor comprising a cylinder, a piston therein, an exhaust valve for the cylinder comprising a thin rigid disk seating against the end of the cylinder, said disk having an edge portion engaging the cylinder and an inwardly concaved body portion, an end head for said cylinder, and an inwardly flexed resilient disk between said end head and said rigid disk.



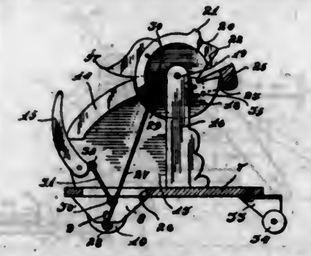
1,693,324. HEAT RADIATOR. HOWARD O. STEPHENS, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Jan. 28, 1926. Serial No. 84,475. 3 Claims. (Cl. 257—191.)

2. The combination with an electrical apparatus casing of a heat radiator comprising a top header and a bottom header, each of said headers having opposite substantially vertically disposed walls, means for securing said headers to the side walls of said casing, the securing means for each header extending through both of its said walls, and a plurality of heat radiating tubes connecting said headers through their outer walls and offset from the plane thereof, whereby ascending currents of cooling air along the tubes are not impeded by said headers.

---

1,693,325. SELECTIVE-CIRCUIT-CONTROLLING SYSTEM. OLIVER C. TRAVER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 17, 1924. Serial No. 750,264. 9 Claims. (Cl. 171—97.)

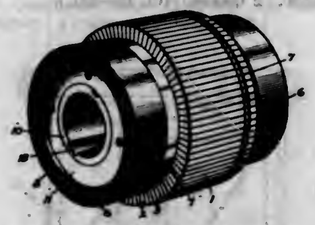
1. In combination, a plurality of electric circuits, controlling means therefor including thermal responsive elements having different heat storage capacities and arranged to be heated in accordance with the current flow in at least one of the circuits and translating devices connected in said circuits to be selectively controlled responsively to the difference in rate of change of temperature of said elements upon variation in the heating current thereof.



---

1,693,326. FIGURE WHEELED TOY. ENOS A. WAGNER, Detroit, Mich. Filed Aug. 6, 1926. Serial No. 127,548. 7 Claims. (Cl. 46—45.)

4. A figure wheeled toy of the class described, comprising: a supporting body; a crank bearing shaft mounted on said supporting body; traction wheels fixedly mounted on said shaft, said supporting body having spaced parts; a head-forming member separate from and rotatably mounted between said parts; a tail-forming member separate from and pivotally mounted on said body; and means connecting said head-forming member and said



tail-forming member to said crank, the connection of said head-forming member to said crank being a loose one, the rotation of said shaft effecting a rocking of said head-

forming member and said tail-forming member, the incipient rocking of said tail-forming member normally preceding the rocking of said head-forming member.

1,693,328. AUTOMATIC RECLOSING-CIRCUIT-BREAKER SYSTEM. ARVID E. ANDERSON, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 21, 1926. Serial No. 117,309. 11 Claims. (Cl. 175—294.)

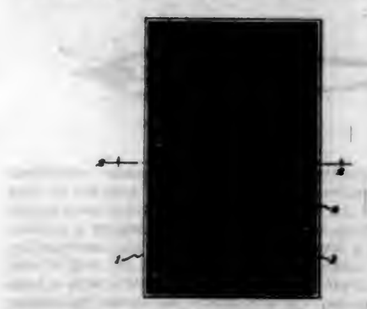
1. In an automatic reclosing circuit breaker system, a supply circuit, a load circuit, a circuit breaker for connecting said circuits together, means for effecting the opening of said circuit breaker, means for producing a voltage change across said load circuit when said circuit breaker is open, and means responsive to the rate at which the voltage across said load circuit changes in response to the operation of said last mentioned means for controlling the reclosing of said circuit breaker.

1,693,329. BRUSH. EDWARD F. ASTLEY, Chicago, Ill., assignor to Humboldt M. Seyer, Chicago, Ill. Filed Mar. 7, 1927. Serial No. 173,379. 2 Claims. (Cl. 15—133.)

1. A fountain-brush consisting of a handle comprising two hollow members removably connected together to form a reservoir for the liquid contents of the brush, said handle including a tip-member having at its extremity a reduced opening; and a brush extending through and embraced by and normally making sealing contact with the wall of said opening, said brush having its inner end fitted with a band equipped with arms, and stop-means within the tip-member of the handle engaging said arms and serving to limit inward movement of the brush.

---

1,693,330. FOUNTAIN BRUSH. EDWARD F. ASTLEY, Chicago, Ill., assignor to Humboldt M. Seyer, Chicago, Ill. Filed Nov. 28, 1927. Serial No. 236,800. 3 Claims. (Cl. 15—133.)



1. A fountain-brush comprising a liquid-containing handle provided at its operative end with an opening, and a brush-unit secured within the operative end of said handle, comprising bristles and means holding the bristles compacted together some distance above said opening, the extremity of the operative end of the handle being equipped with an annulus which embraces and normally makes sealing contact with the bristles extending therethrough but permits the bristles to be moved away from the embracing wall at one side when brushing pressure is exerted, thus opening a space through which liquid may flow outwardly and through which air may pass inwardly.

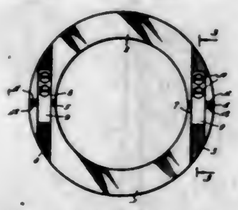
1,693,331. MANUFACTURE OF ALIPHATIC COMPOUNDS. WALTER BADER, Spondon, near Derby, England, assignor to Celanese Corporation of America, a Corporation of Delaware. Filed Nov. 6, 1924, Serial No. 748,285, and in Great Britain Jan. 24, 1924. 17 Claims. (Cl. 260—123.)



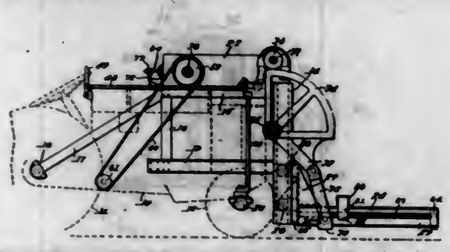
1. A process for the manufacture of aliphatic acidyl derivatives of water characterised in that a ketone and carbon dioxide are combined.

1,693,332. PRINT PLATE. GEORGE A. BANNER, Omaha, Nebr., assignor of one-third to Birt J. Bates and one-third to Carl Andersen, Omaha, Nebr. Filed June 2, 1927. Serial No. 196,097. 4 Claims. (Cl. 101—401.)

1. A type plate comprising a plurality of sheets adhesively secured, the top sheet being adapted to receive the engraving and to have portions removed by being cut through to the next sheet and separated therefrom.

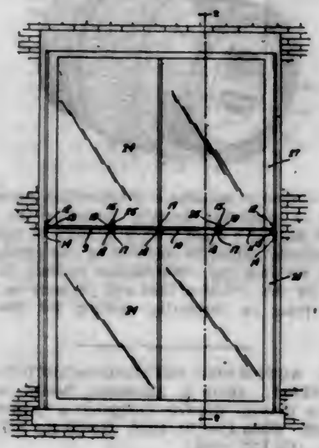
1,693,333. BEARING BUSHING. DWIGHT O. BARRETT, Springfield, Ohio. Filed Aug. 12, 1927. Serial No. 212,530. 3 Claims. (Cl. 308—237.)

1. A bushing for bearings, comprising a pair of arc-shaped bearing sections formed with straight slots in the end, guiding keys secured to one section and extending slidingly into the other section, said keys being fitted into said slots, and shims arranged between said sections for spacing the same apart.



1,693,334. HEADLIGHT. SAMUEL T. BEARE, Jackson, Tenn. Filed Feb. 3, 1928. Serial No. 251,638. 2 Claims. (Cl. 176—16.)

1. An automobile lamp, comprising an incandescent lamp bulb having a translucent shield applied thereto, said shield comprising a portion extending longitudinally of the bulb and covering approximately one-half thereof and a portion covering the end of the bulb except a portion of the bulb in axial alignment with the latter forming a bull's eye.

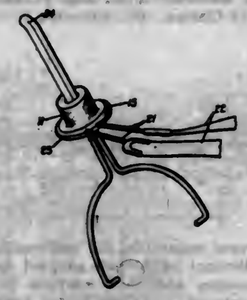


1,693,335. LOADING AND UNLOADING ATTACHMENT FOR TRACTORS. MARK H. DAMBRELL, Worcester, Mass., assignor to Wyman-Gordon Company, Worcester, Mass., a Corporation of Massachusetts. Filed May 13, 1926. Serial No. 108,944. 8 Claims. (Cl. 214—65.)

1. A loading and transporting attachment for a tractor having a main frame comprising a supplemental frame fixed to said main frame of said tractor and projecting forward in front of said tractor frame, said supplemental frame having substantially vertical guide-ways thereon, a work-supporting table mounted for extended vertical movement in said guide-ways on said supplemental frame, loading means mounted on said table and movable therealong for moving

the load relative to said table and means selectively operative to drive said tractor or to raise or lower said table in said guide-ways.

1,693,336. WINDOW-CLEANING DEVICE. ANTHONY J. DEVENBER, Trenton, N. J. Filed Apr. 9, 1928. Serial No. 268,530. 2 Claims. (Cl. 15—251.)



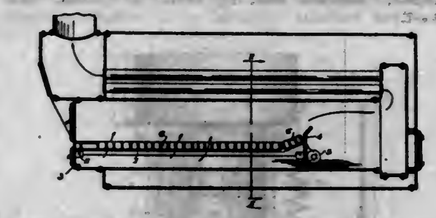
1. A window cleaning device of the class described comprising a pair of attaching brackets, each including a socketed portion and attaching flanges, a longitudinal extensible supporting member adapted to occupy a horizontally disposed position and including telescopically connected sections have their outer ends removably arranged in the socket portion of said attaching brackets, retaining bolts associated with the telescopically connected sections for maintaining said sections in adjusted position, and wiping means embodying a wiping element and retaining clamps for said elements, said clamps being disposed at right angles to said supporting member, and including portions extending across and intersecting the supporting member, and connected therewith by said retaining bolt.

1,693,337. TELEPHONE HEAD SET. ARTHUR EASTMOPE, Coventry, England, assignor to General Electric Company, a Corporation of New York. Filed Mar. 6, 1925, Serial No. 13,572, and in Great Britain Apr. 17, 1924. 5 Claims. (Cl. 179—156.)

1. In a telephone head set, a receiver support including a stem, a slider bracket mounted on said stem, said bracket

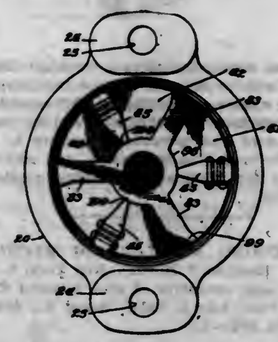
having a longitudinally extending bore provided with a plurality of restricted portions which conform substantially in shape to the cross section of said stem; an ex-

ternal grooved flange integral with said bracket and substantially at right angles to said bore, said flange being adapted to receive a head band wire.



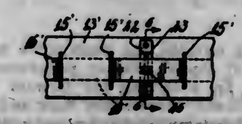
1,693,338. TOILET-PAPER HOLDER. ALFRED B. HONSCHOFF, Cincinnati, Ohio. Filed Sept. 18, 1926. Serial No. 136,286. 1 Claim. (Cl. 242—55.5.)

A holder for roll toilet paper comprising a roll supporting roller having a bearing pin in each end, a body having a flat back for support against a wall surface, a lip at the bottom of the back and spaced therefrom to leave a slot for the passage of paper therethrough, said lip having a paper-severing lower edge, sides on the back, each of said sides containing an eccentrically located substantially circular opening to permit the placing of the roll mounting roller therethrough, with a notch in the bottom edge of each opening to receive the roller bearing pins, and a notched cover pivotally attached to the sides of the body and closing the space between the sides, the notch of the cover being in its lower edge and in front of the slot between the lip and back, whereby access to the paper passing through the slot from the roll may be had for feeding movement by the user's fingers.



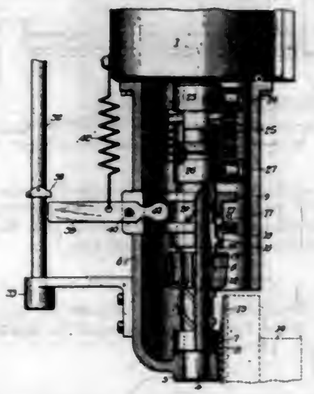
1,693,339. BOILER GRATE AND THE LIKE. ALBERT H. KEMPER and WILLIAM H. DURKIN, Dayton, Ohio. Filed Aug. 23, 1927. Serial No. 214,940. 2 Claims. (Cl. 126—152.)

2. In boiler grates the combination of parallel side bars fixed at their forward ends and movably supported at their rear ends, to compensate for the contraction and expansion of the bars, a bridge wall secured to and supporting the rearward ends of the side bars and movable therewith, and stationary grate bars extended transversely be-



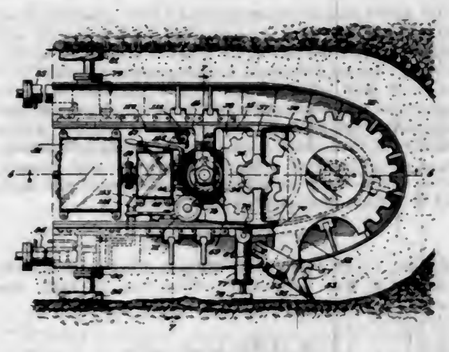
tween and supported freely at their opposite ends on the side bars, and an air duct combined with the bridge wall leading from the air space below the grate over the bridge wall into the air space above the fuel bed.

1,693,340. SHOCK ABSORBER. HENRY H. LOGAN, Chicago, Ill. Filed June 4, 1928. Serial No. 282,594. 16 Claims. (Cl. 188—89.)



16. In a hydraulic shock absorber of the class described, the combination of a casing having a bearing formed therein, said casing having an internal cylindrical surface forming a working chamber, a shaft journaled in said bearing, said shaft being formed with a plurality of vanes adapted to slidably engage said internal cylindrical surface when said shaft is located in said bearing, and a plurality of fixed vanes carried by said casing and slidably engaging portions of said shaft between said movable vanes, said movable vanes equally spaced around said shaft and at angular distances less than 180°.

1,693,341. HAT HOLDER. FERNAND LOYER and MARCEL GOSSELIN, New York, N. Y. Filed Aug. 23, 1927. Serial No. 214,854. 2 Claims. (Cl. 2—183.)

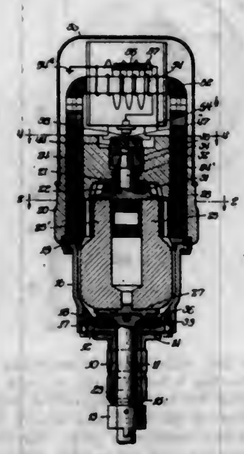


1. The combination with a sweat band for a hat, having spaced slots and an elastic band disposed thru the slots, of a plate having a longitudinal slot therein, mounted on the outer side of the said sweat band, and a spring clip slidably mounted in said longitudinal slot, and engaging the said elastic band for holding the elastic band in adjusted vertical positions relative to the sweat band for preventing the forming of a circumferential ring on a wearer's head due to the said elastic band continually acting in one vertical plane.

1,693,342. ENGINE STARTER. WILLIAM L. MCGRATH, Elmira, N. Y., assignor to Eclipse Machine Company, a Corporation of New York. Filed Feb. 3, 1923, Serial No. 616,668. Renewed Mar. 21, 1927. 12 Claims. (Cl. 74—7.)

1. An engine starter including a vertically disposed rotatable shaft, a drive mounted thereon and driven thereby and including a sleeve, a driving member mounted on the sleeve for rotary movement therewith and for longitudinal movement thereof and movable by gravity to engage a member of the engine to be started, and manually controlled means for holding the driving member in retracted position.

1,693,343. MINING AND LOADING MACHINE AND METHOD. EDMUND C. MORGAN, New York, N. Y.; Olive Eugenie Morgan executrix of said Edmund C. Morgan, deceased. Filed July 2, 1921. Serial No. 482,163. 47 Claims. (Cl. 262—5.)

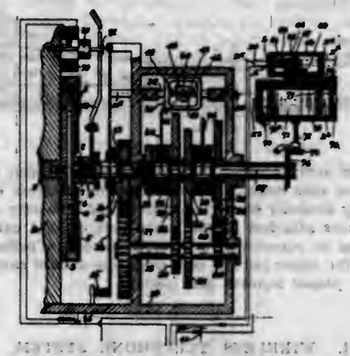


1. In a mining machine, the combination with a supporting frame, of liquid pressure power-operated roof jack mechanism for anchoring the forward portion of said supporting frame between the floor and roof of a mine chamber, dislodging mechanism comprising an upright series of spaced-apart coal piercing implements for receiving concentrated pressure to penetrate and strip the coal from a mine vein by arcuate movement relatively to said supporting frame and in advance thereof, and power transmission mechanism comprising speed reducing mechanism connected to a large spur gear rigidly connected to said piercing implements for operating said dislodging mechanism by feeding the same arcuately relatively to said supporting frame while the latter is firmly anchored by said roof jack mechanism.

1,693,344. LOADING AND CONVEYING APPARATUS FOR COAL MINES. EDMUND C. MORGAN, New York, N. Y.; Olive Eugenie Morgan executrix of said Edmund C. Morgan, deceased. Filed Aug. 11, 1921. Serial No. 491,474. 11 Claims. (Cl. 198—191.)

1. In conveyer apparatus, the combination with a plurality of individual units each adapted to operate as a complete conveyer and each adapted to rest on and slide over a mine floor, of means for flexibly connecting one unit to the next adjacent unit to extend the conveyer in length while accommodating itself to irregularities of such floor, driving connections for each unit, and flexible coupling mechanism between the driving connections of one unit and those of the next adjacent unit.

1,693,345. MAGNETO CONSTRUCTION. EDWARD DE W. PERRY, Pawtucket, R. I., assignor to Scintilla Magneto Company, Inc., Sidney, N. Y., a Corporation of New York. Filed Feb. 10, 1926. Serial No. 87,242. 14 Claims. (Cl. 171—209.)

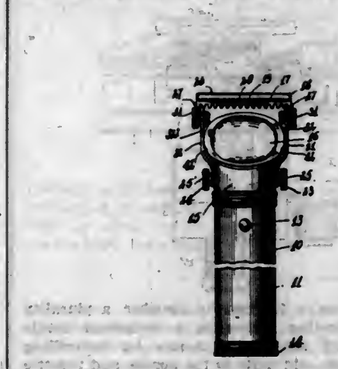


1. In an ignition device, the combination of a rotor comprising a permanent magnet mounted for rotation on a vertical axis, and presenting a plurality each of positive and negative pole pieces, and an armature provided with lamination stacks having horizontally extending laminations disposed for magnetic co-operation with a plurality of like rotor poles simultaneously.

1,693,346. AUTOMATIC MOTOR GEAR-CHANGING MEANS. ADOLPHE C. PETERSON, Minneapolis, Minn. Filed Dec. 4, 1924. Serial No. 753,980. 7 Claims. (Cl. 74—58.)

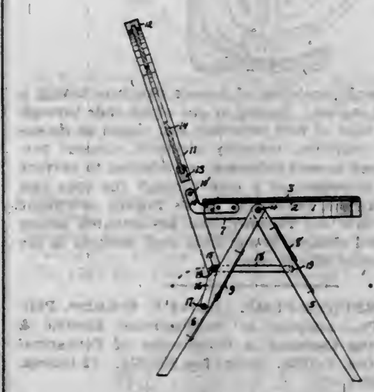
1. In a variable gear transmission, a driving element and a driven element, transmission units each adapted to effect different engagement between the driving and driven elements, selector units each related to a transmission unit and adapted to move the related unit into or out of engagement, a rotatable cam unit having such relation to the selector units that in specific positions of its rotation different actuating relation of the selector units is obtained, an electric motor adapted to rotate the rotatable

cam unit, a control means embodying a current source, a circuit closing means for each engagement relation, and a rotatable circuit completing means rotatable with the rotatable cam unit having independent circuit completing means related to each circuit closing means.



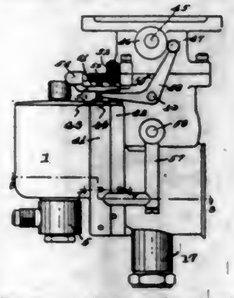
1,693,347. ADJUSTABLE WRENCH. ABRAHAM S. PINKUS, New York, N. Y. Filed Mar. 7, 1927. Serial No. 173,516. 1 Claim. (Cl. 81—126.)

An adjustable wrench as described comprising a handle, a fixed jaw and a sliding jaw, said fixed jaw connected by a pivot to said handle and having a rectangular slot, also an arcute slot formed about a radial centre at right angles to said rectangular slot, said pivot passing through the radial centre of said arcuate slot and forming a ridge transverse to and on the lower side of said rectangular slot and said sliding jaw having a tongue fitting said rectangular slot with its lower side under-cut to clear said pivot and permit a limited sliding movement of said jaw, there being a slot in said tongue transverse to its plane of movement aligning with said arcuate slot and a pin passing through said handle, arcuate slot and transverse slot whereby said sliding jaw is actuated relative to said fixed jaw by said handle.



1,693,348. FLASH LIGHT SAFETY RAZOR. FRANK POLLIFRONE, Brooklyn, N. Y. Filed Mar. 6, 1926. Serial No. 92,793. 1 Claim. (Cl. 240—6.4.)

In a device of the class described, the combination with a cap adapted to cover one end of a flashlight and to direct light therefrom, of links pivotally attached at one end to the sides of said cap and diverging in advance thereof in spaced relation to the paths of the rays of light emitted by said flashlight, said links being adapted at their upper extremities to be pivotally attached to the end



portions of a safety razor for adjustably supporting the same in advance of said cap, and projections on the inner sides of said links adapted to engage in spaced recesses in said cap for retaining said links in an adjusted postion.

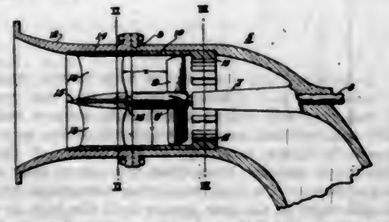
1,693,349. FOLDING CHAIR. WILLIAM C. RASTETTER, Fort Wayne, Ind. Filed June 24, 1927. Serial No. 201,178. 4 Claims. (Cl. 155—139.)

1. A folding chair including a back having depending side members, a seat member pivoted to said side members, fore and rear legs, means to pivotally connect said legs to the seat member, said side members of the back being disposed in planes exteriorly of the planes of the legs, a transverse member connecting the lower ends of the side members of the back and being engageable with the rear side edges of the rear legs to hold the back in operative position, links pivoted at one of their ends to said transverse member and at their opposite ends to the rear legs, and links pivoted at one of their ends to said transverse member and at their opposite ends to said fore legs.

**1,693,850. FLOATING-VENTURI CARBURETOR.** CHARLES L. RAYFIELD, Chicago, Ill., assignor, by mesne assignments, to Marvel Carbureter Company, Flint, Mich., a Corporation of Indiana. Filed Sept. 15, 1920. Serial No. 410,403. 2 Claims. (Cl. 261—51.)

1. In a carburetor, a fuel supply chamber, a plurality of wells communicating therewith, a compound nozzle communicating with said wells, means for controlling the flow of fuel from said wells to the nozzle, and throttle controlled means for successively operating said controlling means.

---



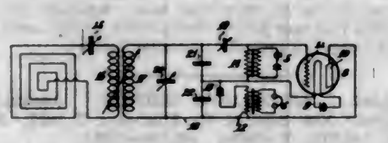
**1,693,351. COIN BANK.** EDMUND H. SANDKUHL, Brooklyn, N. Y., assignor to David H. Zell, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 4, 1927. Serial No. 180,663. 4 Claims. (Cl. 232—4.)

1. A coin bank consisting of a bank structure having a coin receiving raceway opening at one of its ends through the marginal edge of said structure and closed at its opposite end, a shiftable, inwardly yieldable, element permanently housed in said structure and adapted to prevent the outward movement of a coin through the open end of the raceway but permitting of its inward movement therethrough into the raceway, and key-actuated means for shifting said element to and from such position in the path of movement of the coin.

---

**1,693,352. DREDGER PUMP.** HENRY F. SCHMIDT, Philadelphia, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 6, 1922. Serial No. 605,314. 12 Claims. (Cl. 103—89.)

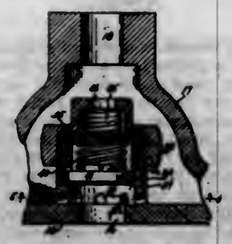
1. The combination with a propeller-pump provided with an intake member, of crushing teeth mounted on the interior of said intake member and adapted to coact with the propeller blades in reducing foreign substances attempting to pass through the pump.



**1,693,353. DRAG SCRAPER.** WILLIAM J. SLAVIN, Howell, Mich. Filed Feb. 23, 1926. Serial No. 89,960. 1 Claim. (Cl. 37—147.)

A drag scraper comprising a hollow body open at the front and rear ends, a closure gate for the rear end of said body hingedly connected thereto and upwardly swingable, cables attached to the lower part of said gate and extending in opposite directions therefrom, a pulley carried by the upper part of said gate, one of said cables being also passed beneath said pulley.

---



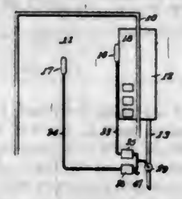
**1,693,354. WIRELESS TELEPHONE SYSTEM.** MORTON W. STERNS, Jamaica, N. Y. Filed Jan. 24, 1925. Serial No. 4,397. 5 Claims. (Cl. 250—9.)

1. In a single radio set for both transmission and reception, an antenna system, an oscillation generator having a cathode, an anode, and a control ement, said anode and said control element being connected by a circuit including a control element condenser and a tuning inductance, said tuning inductance being magnetically coupled to said antenan system, said control element having a modulating device included in its associated circuits and said anode having a telephone receiving device connected in its assocated circuits.

---

**1,693,355. REFRIGERATING APPARATUS.** MELBOURNE E. THOMPSON, Detroit, Mich., assignor to Trippensee Sales and Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed June 16, 1927. Serial No. 199,274. 1 Claim. (Cl. 251—144.)

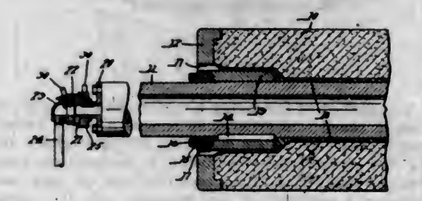
A compressor outlet valve comprising a guide sleeve surrounding the outlet port, a disc valve guided therein, said sleeve having lateral openings below the normal upper travel of said valve and being open at its upper end, an abutment in said sleeve for normally limiting the upward movement of said valve, and yielding means for permitting movement of said abutment to allow abnormal movement of said valve, said abutment being provided with passages adapted to be opened by such abnormal movement to connect the space under the valve with the open end of said guide sleeve.



**1,693,356. PROCESS FOR PRODUCING A FUEL FROM PULVERIZED COAL.** WALTER EDWIN TRENT, New York, N. Y., assignor to Trent's Process Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 22, 1926. Serial No. 150,153. 10 Claims. (Cl. 44—1.)

1. A process for producing a fuel, consisting in pulverizing coal containing a substantial volatile content to a fine state of division, and in heating such material to remove volatiles therefrom in sufficient quantity to entrain and carry in suspension therein the fine carbonaceous particles.

---

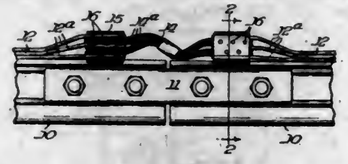


**1,693,357. REFRIGERATION.** HERVEY S. VASSAR, Bloomfield, N. J. Filed Jan. 18, 1926. Serial No. 81,891. 4 Claims. (Cl. 62—5.)

1. In refrigeration, a machine of the absorption type including a cooling element and a heater for effecting operation of the machine, a conduit for flow of heating fluid to said heater, a control valve in said conduit, actuating means for said valve, a thermostatically governed controller adjacent the cooling unit, a thermostatically governed controller located at a point removed from the cooling unit, means for connecting said controllers with each other and with the valve operating means to require joint operation of both controllers to effect opening movement of the valve and arbitrarily operable means for effecting opening movement of the valve independently of one of the controllers but jointly and in conjunction with the other of the controllers.

---

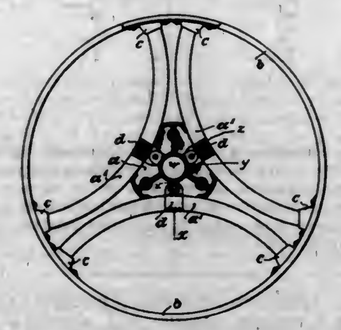
**1,693,358. STONE ROLL.** JOHN WARREN VEDDER, Worcester, Mass. Filed Jan. 9, 1928. Serial No. 245,328. 4 Claims. (Cl. 92—49.)



1. The combination with a stone roll for a paper making machine, of a hollow shaft passing through the roll on which it is supported and connections at the ends of the shaft for circulating cooling water through the center of the shaft from one end to the other.

---

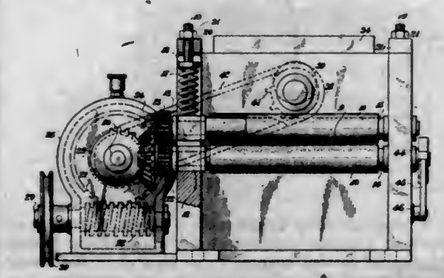
**1,693,359. CONNECTION FOR ELECTRICAL CONDUCTORS.** ALFRED WICHERT, Mannheim-Neuostheim, Germany, assignor to Aktiengesellschaft Brown, Boveri & Cie., Baden, Switzerland, a Joint Stock Company. Filed Jan. 27, 1927, Serial No. 164,037, and in Germany Feb. 8, 1926. 1 Claim. (Cl. 173—262.)



In electrical conductors, the combination with laminated conductors, of a flexible connecting conductor having component laminations, the end portions of the laminations of the connecting conductor being overlapped with the end portions of laminations of the other conductors, constraining members embracing the overlapped portions of said laminations, and wedges passing transversely

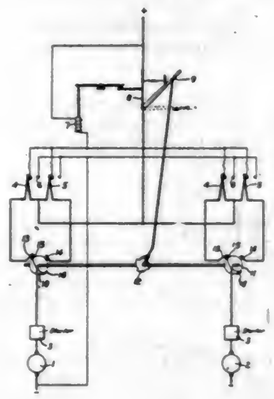
through said constraining members between some of the overlapped laminations and clamping some of the laminations in close surface contact under constraint of the constraining members.

---



**1,693,360. VEHICLE WHEEL.** FREDERICK W. BAKER, Oldswinford, Stourbridge, England, assignor to Trinity Wheel Corporation, a Corporation of New York. Filed Feb. 2, 1920, Serial No. 355,631, and in Great Britain Dec. 10, 1919. Renewed Sept. 15, 1925. 3 Claims. (Cl. 152—29.)

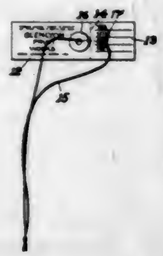
2. In a vehicle wheel, a rim and a plurality of arched spokes, each rigid throughout with its ends terminating at the rim, the spokes being spaced apart with their arches confronting each other.



---

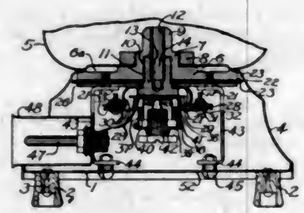
**1,693,361. MACHINE FOR CUTTING OFF STOCK.** THOMAS A. BEANEY, Poughkeepsie, N. Y., assignor to Beaney Rubber Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 10, 1927. Serial No. 174,173. 1 Claim. (Cl. 164—49.)

A machine for cutting off stock comprising a stock feed, a cutter shearing across the stock behind the stock feed, a mutilated gear driving the stock feed, and a detent for the stock feed comprising a wheel having a number of teeth proportional to the arc occupied by teeth on the mutilated gear and a pawl for said teeth.



1,693,362. THERMAL PROTECTIVE SYSTEM. HANS BEIERSDORF, Berlin-Grunewald, Germany, assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 29, 1925. Serial No. 65,632, and in Germany Oct. 30, 1924. 5 Claims. (Cl. 175—294.)

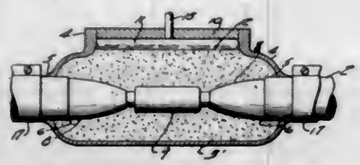
5. In combination, a circuit-interrupter and a plurality of protective relays associated therewith to independently control the actuation thereof, and means operable upon the successive actuation of said circuit-interrupter to alternately connect said relays in operative relation to said circuit interrupter.



---

1,693,363. LABEL FOR WOUND OR ROLLED FABRICS. GEORGE E. BENNETT, Riverside, R. I., assignor to Sayles Finishing Plants, Inc., Saylesville, R. I., a Corporation of Rhode Island. Filed Mar. 5, 1928. Serial No. 259,093. 4 Claims. (Cl. 40—2.)

1. A label for cloth wound upon a holder, consisting of a sheet of material comprising a unitary whole having an anchoring portion adapted to be secured to the holder and a data-bearing portion secured to the anchoring portion by a weakened line along which it may be torn off from the anchoring portion, and a connecting element between said portions in addition to said weakened line to connect the data-bearing portion to the roll of cloth after the data-bearing portion has been torn off from the anchoring portion.

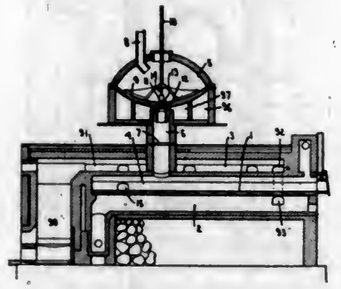


1,693,364. ELECTRIC HEATER FOR PERCOLATORS AND THE LIKE. ALFRED BERSTED and MARTIN BERSTED, Chicago, Ill. Filed Apr. 23, 1927. Serial No. 185,938. 6 Claims. (Cl. 219—44.)

1. In a device of the class described, a heating element, a conductive member and a contact member adjacent thereto, both in circuit with said element, resilient means associated with said contact member, and fusible means forcing said contact member against said conductive member in opposition to the action of said resilient means.

---

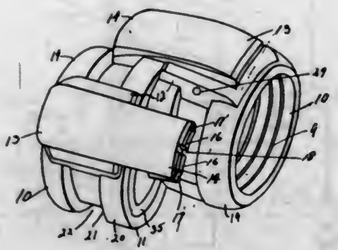
1,693,365. METHOD OF FORMING HIGH-TENSION CABLE JOINTS OR SPLICES FOR UNDERGROUND SYSTEMS. WILLIAM E. BOYLE and HUDSON R. SEARING, New York, N. Y., assignors, by direct and mesne assignments, to Engineering Products Corporation, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 6, 1924. Serial No. 754,273. 5 Claims. (Cl. 173—268.)



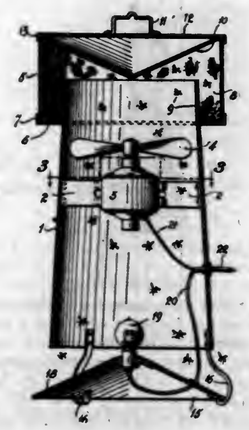
3. The method of insulating a cable conductor splice in situ which consists in forming an enclosing casing around the splice, introducing an insulating oil bath within the casing and applying pressure thereto to saturate the cable insulation therewithin, then removing the oil bath and introducing a quantity of raw material into the casing which is capable of transformation by treatment into a solid impermeable insulating mass, and subjecting the material to combined pressure and heat treatment to transform it into a solid impermeable insulating mass surrounding the splice and filling the crevices and interstices within the casing and about the joint.

---

1,693,366. MECHANICAL FURNACE. OTTO H. BUSE, Shaker Heights, Ohio, assignor to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Ohio. Original application filed July 5, 1922, Serial No. 573,026, now Patent No. 1,561,054. Divided and this application filed Oct. 13, 1925. Serial No. 62,290. 4 Claims. (Cl. 23—277.)



1. In a two stage mechanical furnace, the combination of a charging pot, a furnace chamber below said pot, means for stirring material in said pot, an opening to allow gravity discharge of materials from said pot, and a removable plug closing such opening, a sealing groove being formed between the plug and the wall of the opening in the closed position of the plug.



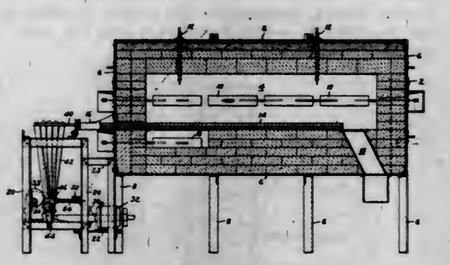
---

1,693,367. HOSE COUPLING. GEORGE H. CALLAHAN, Gloucester, N. J. Filed Aug. 12, 1926. Serial No. 128,750. 3 Claims. (Cl. 285—65.)

1. A hose coupling comprising a pair of cooperating members, each including a cylindrical body having a circular groove on the inside thereof adjacent the working face; a compressible gasket mounted in the groove and having portions projecting into the bore of the member and outside of the working face thereof; circumferential ribs on the outside of said body, the one adjacent the working face having its rear side beveled in opposite directions; a latch having a portion projecting from the body for registration with the space between the ribs of the cooperating member; a lip projecting from the latch; a ledge projecting from the rear rib of the body into the space between the two ribs and inside of which the lip on the latch of the cooperating member is to enter; and a catch in the region of the ledge for coaction with a recess in the lip of the latch of the cooperating member for the purpose stated.

1,693,368. MOSQUITO AND INSECT TRAP. GEORGE C. CHERRY, Dallas, Tex., assignor to Effie May Cherry, Dallas, Tex. Filed Nov. 4, 1927. Serial No. 231,058. 6 Claims. (Cl. 43—113.)

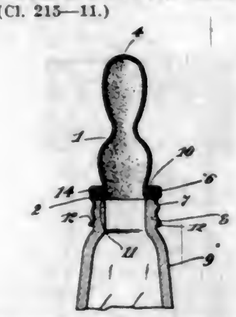
1. An insect trap comprising a cylindrical, hollow element, a cone spaced from the bottom thereof, a cone spaced from the top thereof, insect attracting means on the lower cone, means in the cylindrical element for creating air suction therethrough, and a receptacle on the cylindrical element for collecting the insects.



---

1,693,369. HEAT-RESPONSIVE MATERIAL. PAUL B. COCHRAN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 21, 1927. Serial No. 185,665. 7 Claims. (Cl. 134—39.)

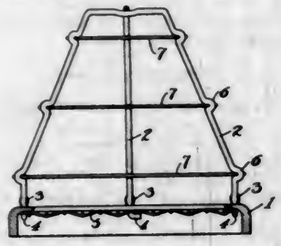
2. A heat-responsive material comprising a waterproof vehicle and a composition including about thirty parts cuprous iodide and about seventy parts mercuric iodide.



---

1,693,370. FURNACE. ORA A. COLBY, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 11, 1927. Serial No. 190,552. 4 Claims. (Cl. 214—18.)

1. In a furnace, a plurality of pushers for moving a plurality of articles through said furnace, and means for operating said pushers in a predetermined sequence, said means comprising a motor-driven cam cooperating with one of said pushers, and a plurality of cams adjustable radially with respect to said first cam and driven thereby.



1,693,371. FEEDING DEVICE. JAMES O. DERGAN, Toronto, Ontario, Canada, assignor to Anchor Cap & Closure Corporation, Long Island City, N. Y., a Corporation of New York. Filed Dec. 31, 1926. Serial No. 158,193. 6 Claims. (Cl. 215—11.)

1. A feeding bottle comprising a container, a nipple having an annular bead at its lower edge, and a metallic member having an aperture in its upper portion adapted to receive said nipple, the upper part of said member having a narrow flange adapted to extend over the bead on said nipple, with the free edge of said flange bent downwardly to engage and to hold said nipple in position on the end of said container.

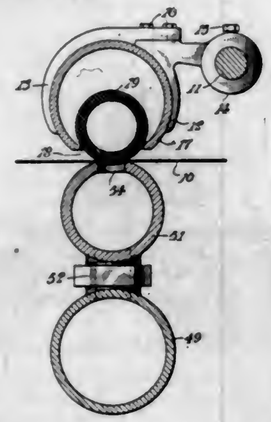
1,693,372. FLOWER HOLDER. RENE E. DENMAN, Kansas City, Mo. Filed Oct. 26, 1927. Serial No. 228,877. 5 Claims. (Cl. 47—41.)

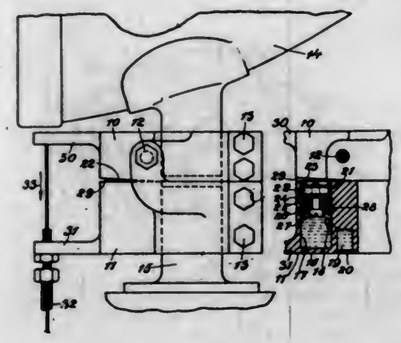
1. A flower holder comprising a plurality of corrugated endless wires of different diameters supported in a substantially horizontal position and in spaced apart relation, a weighted base, and uprights held in said base and looped at spaced heights to afford support for the corrugated wires.



---

1,693,373. REFRIGERATING APPARATUS. JACOB FAHRNI, Zurich, Switzerland: Filed Sept. 18, 1926, Serial No. 136,316, and in Switzerland July 26, 1926. 2 Claims. (Cl. 62—75.)

1. Refrigerating apparatus comprising a square tank, a detachable lid on said tank, a casing adapted to receive a refrigerating medium and to be inserted in said tank and a plurality of containers adapted to receive the material to be refrigerated secured in said casing.

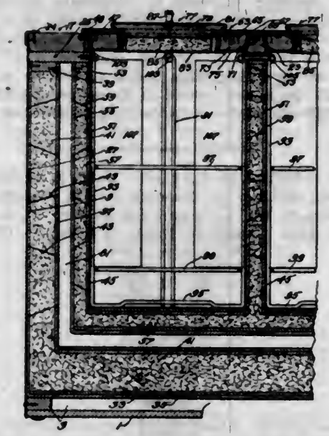


1,693,374. VACUUM SEAL. WILLIAM P. FEENEY, Cheboygan, Mich. Filed Nov. 1, 1927. Serial No. 230,377. 6 Claims. (Cl. 92—50.)

1. In an apparatus of the class described, a pulp carrier, a suction device for inducing a draft through said carrier, said device being provided with an intake aperture, and means adapted to be positioned in alignment with said aperture to restrict the draft through said carrier.

---

1,693,375. DIRIGIBLE HEADLIGHT. RENÉ FERRERO, Geneva, Switzerland. Filed Jan. 12, 1928, Serial No. 246,351, and in Germany Feb. 10, 1927. 5 Claims. (Cl. 240—61.)



1. In an articulated headlight support for motor or other vehicles the combination, with supporting members which can move relatively to a limited extent, of a piston working in a cylinder against which said motion has to take place and by means of which air is compressed, the cylinder being almost filled in with liquid so as to present a small air cushion between the rear surface of the piston and the liquid.

---

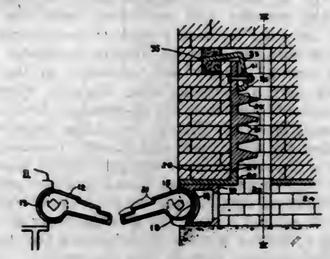
1,693,376. REFRIGERATING CABINET. HENRY C. FOLGER, Waltham, Mass., assignor, by mesne assignments, to Waltham System, Inc., Waverly, Mass., a Corporation of Massachusetts. Filed July 26, 1926. Serial No. 124,796. 4 Claims. (Cl. 220—9.)

1. A refrigerating cabinet comprising, in combination, outer and inner casings, a heat insulation lining for the outer casing comprising nested, spaced corrugated paper boxes and kapok in the space between said boxes; and a heat insulation sheath for the inner casing comprising nested, spaced corrugated paper boxes and kapok in the

space between said boxes; said lining and sheath being in nested relation and having a substantial air space between them.

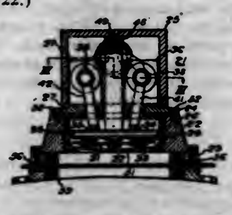
---

1,693,377. REFRIGERATION APPARATUS. HENRY C. FOLGER, Waltham, Mass., assignor, by mesne assignments, to Waltham System, Inc., Waverly, Mass., a Corporation of Massachusetts. Filed Mar. 17, 1927. Serial No. 175,980. 4 Claims. (Cl. 62—157.)



2. A readily portable compact unit for refrigerating ice cream comprising a closed cartridge made of metal and having the external form of a triangular prism, and a refrigerating liquid in the cartridge which freezes at a temperature substantially lower than the freezing temperature of ice cream.

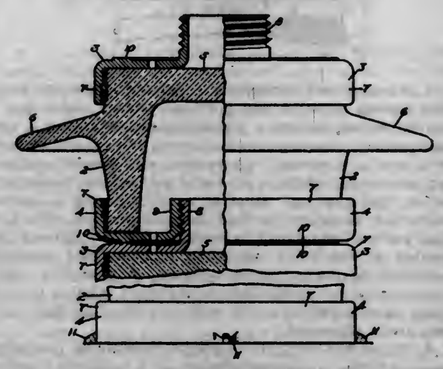
---



1,693,378. AIR-COOLED FURNACE WALL. ROBERT A. FORKSMAN, Moore, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 3, 1924. Serial No. 753,585. 4 Claims. (Cl. 110—68.)

1. In a furnace provided with a rear dump grate, a casting for supporting said dump grate, an angle member resting thereon, a masonry wall exposed to the furnace and resting on one leg of said angle member, an upstanding longitudinally extending heat transmitting member resting on the edge of the other leg of said angle member and abutting said wall, and a clamping member imbedded partially in said wall and engaging the upper portion of said heat transmitting member.

---



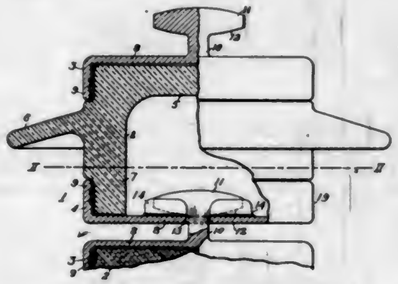
1,693,379. THERMAL RELAY. HARLAN S. GANO, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 23, 1926. Serial No. 117,896. 7 Claims. (Cl. 200—122.)

1. A thermal relay for an energy-translating device, comprising a thermally-actuable member, means for mounting it on an energy-translating device and for subjecting it to the temperature thereof, and means in said relay for thermally influencing said thermally-actuable member in accordance with the current continuously traversing an energy-translating device with which it is operatively associated.

---

1,693,380. INSULATOR. GEORGE I. GILCHREST, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 18, 1919. Serial No. 331,548. 12 Claims. (Cl. 173—318.)

1. In an insulator, the combination with a pair of insulating members each having a portion entirely thereacross of insulation and embodying a cylindrical portion having



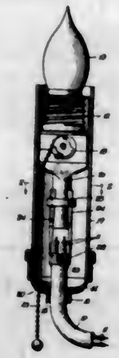
a flat transverse end surface disposed in close proximity to the flat-end surface of the other, of a metal member secured to each of said ends embodying a transverse discoidal portion in relatively close flat-surface relation to its insulating member and contacting with the metal member of the other insulating member, each metal member having a uniform relatively smooth outermost perimeter and a central portion for connection to the other, one of said central portions being disposed within the plane of the outer surface of its discoidal portion.

9. An insulator comprising an insulating member having a recessed cylindrical end and a metal terminal member having a discoidal portion disposed in flat transverse relation to the longitudinal axis of the insulator over said end and cylindrical longitudinal flanges, one of which embraces and is secured to said end and the other of which, constituting a holding portion for attaching the insulator to an exterior member, extends into the recess.

11. An insulator comprising an insulating member having cylindrical ends, one of which is recessed, a metal terminal member having a discoidal portion disposed in flat transverse relation to the longitudinal axis of the insulator over the recessed end thereof and cylindrical longitudinal flanges, one of which embraces and is secured to the recessed end and the other of which is internally screw threaded and extends into the recess, and a similar terminal member having a discoidal portion in flat transyerse position over the other end of the insulating member and cylindrical longitudinal flanges, one of which embraces and is secured to said other end of the insulating member and the other of which is externally screw-threaded and projects outwardly from the insulating member, said terminal members each having an annular raised seat portion on the outer surface thereof intermediate the said flanges thereon.

---

1,693,381. INSULATOR. GEORGE I. GILCHREST, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 20, 1920, Serial No. 352,719. Renewed Mar. 1, 1927. 13 Claims. (Cl. 173—318.)

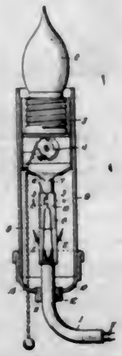


2. An insulator comprising a pair of insulating members having adjacent end portions, one of which has a central recess therein, a terminal member having a central portion extending into said recess and secured in position over said recessed end portion, said inwardly-extending portion embodying a connector seat portion inside said recess, and a second terminal member having a central projecting connector portion for co-operation with said seat portion and secured in position over the adjacent end portion of the other insulating member, said terminal members having adjacent surfaces of relatively great areas spaced in substantially equi-distant relation to each other throughout when the axes of said insulating members are in alinement.

6. In an insulator, the combination with an insulating member having an opening therein, of a connector therefor comprising two members one of which has an elongated slot and a channel portion extending transversely with respect to the slot and the other of which has a projection and a transverse elongated head on the projection for insertion through said slot and for positioning in said channel, said head and said channel being operatively positioned inside the opening in said insulating member.

8. An insulator connector comprising two relatively-thin discoidal members disposed in proximate substantially parallel planes, one of said members having an elongated slot and a channel portion on one side extending transversely with respect to the slot, and the other of said members having a projection and a transverse elongated head on the projection curved at its under side for insertion through said slot and for rocking positioning in said channel.

---

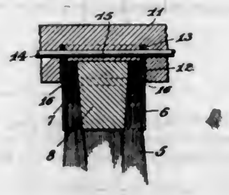


1,693,382. SWITCH MOUNTING. DAVID D. GORDON, Chicago, Ill., assignor to Economy Fuse & Manufacturing Co., Chicago, Ill., a Corporation of New York. Filed Jan. 31, 1925. Serial No. 5,915. 2 Claims. (Cl. 173—354.)

1. In lamp socket mechanism, a conduit for electric wires, elongated holding means mounted on said conduit, an electric socket, a stem carried by said socket said stem having a smooth cylindrical portion adapted to be located between said holding means and having a rotary and axially slidable bearing relationship therewith, and ring means encircling said holding means for holding same in gripping relationship with said stem, said holding means being adapted to be freed sufficiently from said stem to permit longitudinal sliding movement of said stem between said holding means independently of any rotative movement of said stem.

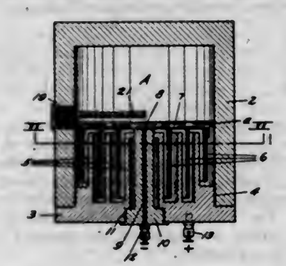
---

1,693,383. CANDLE-SOCKET MOUNTING. DAVID D. GORDON and WILLIAM LINDSAY, Chicago, Ill., assignors to Economy Fuse and Manufacturing Company, Chicago, Ill., a Corporation of New York. Filed June 13, 1925. Serial No. 36,833. 2 Claims. (Cl. 240—52.)



1. In lamp socket mechanism, a conduit for electric wires, elongated clamping holding means mounted on said conduit, an electric socket, a cylindrical stem for supporting said socket and adapted to be located between said holding means whereby to be both rotatably and axially adjustable between said holding means, said holding means having portions jointed together, and screw means disposed on the opposite side of said stem from said jointed portions for holding said holding means in gripping relationship with said stem.

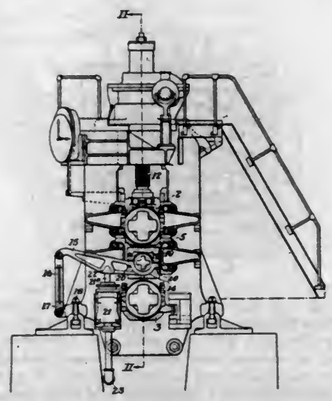
---



1,693,384. BRUSH. ALFRED V. HART, Westfield, N. J., and JOSEPH T. HART, Rockville Center, N. Y. Filed Mar. 23, 1927. Serial No. 177,485. 2 Claims. (Cl. 15—191.)

1. A brush comprising a ferrule having an internal shoulder, bristles engaged in said ferrule and a wedge block having its larger end toward the back end of the ferrule and arranged to crowd the end portions of the bristles over said internal shoulder, and a brush back having a socket for the ferrule with an annular groove at the back of said socket receiving the rim of the ferrule, said groove providing a central boss disposed in the end of the ferrule and engaging the butt end of the wedge block, and said boss within said annular groove providing a backing for the bristles and wedge block.

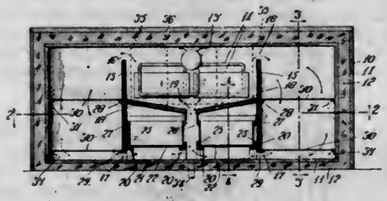
---



1,693,385. BATTERY. FREDERICK W. HOCHSTETTER, Pittsburgh, and WILLIAM BROAD, Mars, Pa., assignors, by mesne assignments, to said Frederick W. Hochstetter. Filed Jan. 21, 1926. Serial No. 82,680. 4 Claims. (Cl. 136—92.)

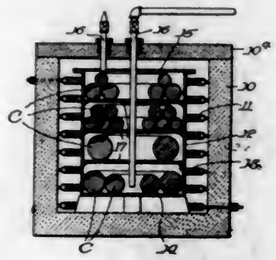
1. A reversible battery consisting of a cylindrical casing having a middle continuously empty space and adapted to contain a limited quantity of fluid electrolyte for a portion of its depth, a closure for one end of the casing having a series of concentrically arranged inwardly extending cylindrical walls of positive polarity, an alternating series of cylindrical walls of negative polarity spaced between said walls, each series having a common connecting portion, means for fixedly holding them in operative relation for partial or complete immersion in or complete withdrawal from the electrolyte, a gas relief conduit extending through the wall of the casing having an open ended inner terminal located in said middle continuously empty space, and an outer supporting plug mounted in the casing wall and provided with a fluid arresting trap cavity communicating with the gas conduit.

---



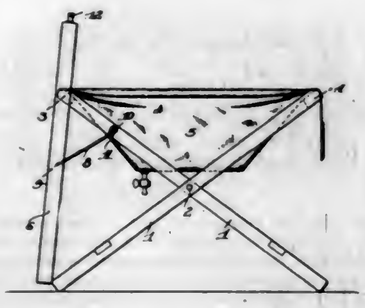
1,693,386. THREE-HIGH ROLLING MILL. LANE JOHNSON, Ingram, Pa., assignor to United Engineering and Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 26, 1924. Serial No. 752,310. 6 Claims. (Cl. 80—39.)

1. In a three-high rolling mill, means for supporting the middle roll, comprising a pair of levers at the opposite ends of said roll each having a bearing for one end of the roll thereon at the end thereof comprising a removable portion whereby the roll can be released from said bearings, each of said levers being pivoted for rocking movement in a vertical plane independently of the other, and means associated with each lever for actuating said levers to raise the middle roll and hold it in such position, substantially as described.



---

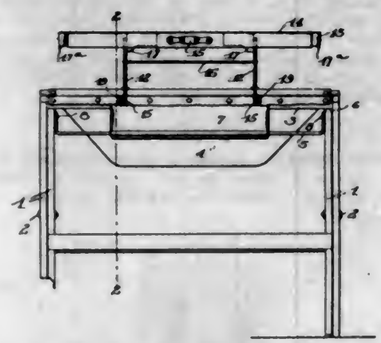
1,693,387. REFRIGERATOR. CHARLES G. JUNEAU, deceased, Wauwatosa, Wis., by Anna K. Juneau, administratrix, Wauwatosa, Wis., and WALTER C. MARSHALL, Milwaukee, Wis. Filed May 25, 1928. Serial No. 280,537. 5 Claims. (Cl. 62—58.)



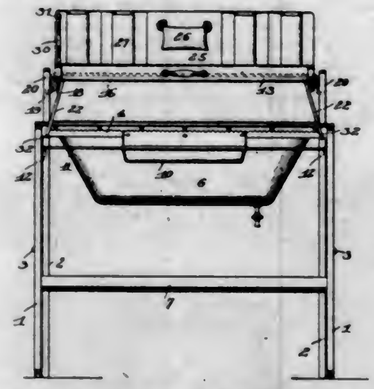
1. A combined refrigerator and kitchen counter comprising insulated top, bottom and side walls, insulated partition walls arranged in spaced relation extending from front wall to rear wall of the refrigerator and arranged to provide air passages at top and bottom thereof, said partition walls being each provided with opposing downwardly sloping baffles extending from front to rear of the refrigerator with the inner longitudinal edges in spaced relation to provide a downwardly disposed cold air passage therebetween, slide-ways secured adjacent to the lower ends of said partition walls and having air passages therebeneath, containers slidable on said slide-ways on each side of said cold air passage and disposed beneath said baffles, resilient plates extending from front to rear secured to the opposite faces of the partition walls and to the baffles, with their free longitudinal sides in contact with the adjacent sides of said containers so as to prevent passage of air across the tops of said containers, and a refrigerating medium, located above said baffles and intermediate of said partition walls.

1,693,388. HEAT-TREATMENT APPARATUS. GOTTLIEB KELLER, Brugg, Switzerland, assignor to Aktiengesellschaft Brown, Boveri & Cie., Baden, Switzerland, a Corporation of Switzerland. Filed June 11, 1927, Serial No. 198,092, and in Germany June 25, 1926. 1 Claim. (Cl. 266—5.)

In heat-treatment apparatus, an open-ended receptacle uprightly disposed with its open end uppermost, means providing a closure for said end, material-supporting shelves of heat-conductive material disposed in and extending transversely of said receptacle and being supported in heat-conductive engagement with the walls thereof and for removal from said receptacle by way of said open end and in spaced relationship with respect to each other to provide superimposed heating chambers in said receptacle, the shelves separating adjacent heating chambers being provided with openings providing communication between such chambers, and means common with respect to said chambers and operable to provide for admission of a non-oxidizing atmosphere into one of said chambers and for the flow of such atmosphere from said chamber into the remaining chambers by way of said communicating openings.



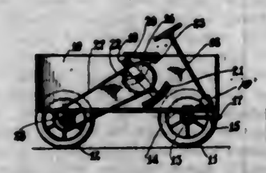
1,693,389. INFANT'S BATHTUB. DEWEY M. KENNEDY and BENJAMIN H. KENNEDY, Rochester, N. Y. Filed July 23, 1923. Serial No. 653,135. 8 Claims. (Cl. 4—177.)



1. The combination with a support and a bath tub carried thereby, of an overlying flexible dressing table and links pivotally connected to the support and the dressing table respectively, adapting the latter to be swung both endwise and flatwise to an upright folded position at one side of the tub.

1,693,390. BATHING APPLIANCE. BENJAMIN H. KENNEDY and DEWEY M. KENNEDY, Rochester, N. Y. Filed July 23, 1923. Serial No. 653,136. 7 Claims. (Cl. 4—177.)

1. The combination with a support and a bath tub carried thereby, of a guide rod extending along one side of the tub and support, carriage blocks rotatable on the guide rod and a dressing table having sliding engagement with the carriage blocks adapting it to move between an operative horizontal position overlying the tub and a vertical inoperative position at one side of the latter.



1,693,391. INFANT'S BATHING APPARATUS. BENJAMIN H. KENNEDY and DEWEY M. KENNEDY, Rochester, N. Y. Filed July 23, 1923. Serial No. 653,137. 9 Claims. (Cl. 4—177.)

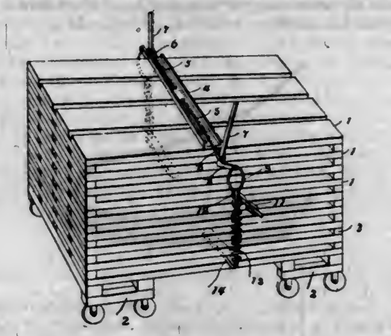
1. The combination with a support and a bath tub carried thereby, of a dressing table having an operative position overlying the tub and a vertical folded position at one side thereof, one of said parts being provided with a swinging yoke and the other with a guideway with which the yoke cooperates to effect a combined sliding and pivotal movement of the dressing table from one position to the other.

1,693,392. TOY SPRING VEHICLE. LUKASZ KOLACZKOWSKI, Helmetta, N. J. Filed Jan. 20, 1928. Serial No. 248,044. 2 Claims. (Cl. 208—153.)

1. In a toy vehicle of the class described, a vehicle body, a pair of levers pivotally secured at one of their ends onto

the sides of the vehicle body, means for holding the other free ends of the levers in adjusted positions, a shaft rotatively mounted in the levers, the sides of the vehicle body being provided with arcuate slots into which the shaft projects, a crank formed on one end of the shaft and disposed on the outside of the vehicle, a gear attached to the shaft, and a chain connecting the gear with the vehicle wheels, whereby the tension of the said chain may be adjusted by a resetting of the said means for holding the free ends of the levers.

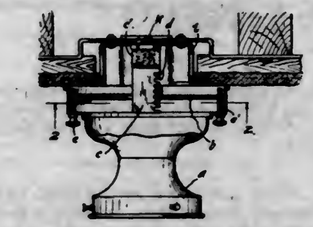
1,693,393. PLANT SUPPORT. CARLO LAPOLLA, New Canaan, Conn. Filed Oct. 5, 1927. Serial No. 224,105. 1 Claim. (Cl. 47—47.)



A plant support formed of a single piece of wire bent back upon itself at its middle point into parallel abutting relation to form a stake element, each of said parallel portions being at the top of the stake element bent outwards in opposite directions, then crossing one another and being, in a plane at right angles to said stake element, bent into semi-circular shape, the free ends of said semi-circular sections being in abutment, thereby forming a plant-engaging loop, the free ends of said semi-circular portions being adapted to recede from one another upon forcing said outwardly bent portions toward each other, a wire coil shiftable upon said stake element below the outwardly bent portions thereof, said wire coil when disposed immediately below said outwardly bent portions preventing accidental relative movement between the latter.

1,693,394. BRAKE-LINING COMPOSITION. ROBERT LAUGHLIN, Chicago, Ill., assignor to Brand Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 3, 1924. Serial No. 747,689. 2 Claims. (Cl. 134—17.)

1. A composition for brake linings, clutch members, and the like, comprising a mixture of the following ingredients: rubber sponge, linseed oil, crude paraffin wax, litharge, sulphur, hard wax tailings, rosin, calcium hydroxide, soft wax tailings or petroleum tailings.



1,693,395. DEVICE TO PREVENT WARPING IN DRYING LUMBER. ESTHER J. LAWTON, Pine Ridge, Oreg. Filed July 27, 1926. Serial No. 125,271. 9 Claims. (Cl. 34—26.)

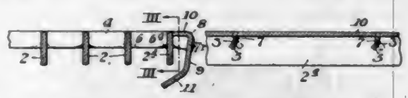
1. A device for resisting warping in flat stacked lumber while the same is drying comprising a beam to extend across and rest upon a pile of lumber to be supported solely thereby, anchoring bars manually engageable between lower

courses of a pile of lumber through the sides thereof, and means carried by the ends of the beam and the outer ends of the anchoring bars for applying pressure to the beam.

1,693,396. CANOPY OR FIXTURE SECURING DEVICE. GEORGE N. LITTLETON, Portland, Oreg. Filed Nov. 22, 1926. Serial No. 149,995. 4 Claims. (Cl. 240—85.)

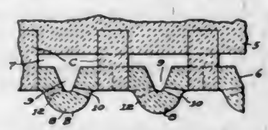
3. In an outlet fixture the combination of an outlet box including a nipple, a flat pendent arm secured to said nipple and provided with a series of notches along one vertical edge, a ceiling flange, a bar arranged transversely therein, a slide mounted on said bar, said slide and said bar provided with slots adapted to receive said pendent arm, said slots registering in one position of said slide, whereby the movement of the ceiling flange sidewise will engage a notch of said pendent arm.

1,693,397. SHOE LAST. CHARLES MILLER, Long Island City, and MAX FEINSTEIN, Corona, N. Y.; said Feinstein assignor to said Miller. Filed Mar. 3, 1927. Serial No. 172,237. 2 Claims. (Cl. 12—133.)



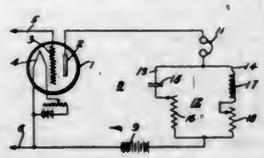
1. A last for shoes, the bottom of said last being provided with a pair of convex raised portions at the ball line of the last, said portions being spaced from each other in a direction transversely of the last, whereby a concavity is formed between said portions, a third convex raised portion formed on the bottom of said last and disposed at the toe portion thereof, and a uniformly inwardly curved arch formed between a point starting at said concavity and extending to said third convex portion.

1,693,398. THERAPEUTIC SHOE. CHARLES MILLER, Long Island City, and MAX FEINSTEIN, Corona, N. Y.; said Feinstein assignor to said Miller. Filed July 7, 1927. Serial No. 203,903. 3 Claims. (Cl. 36—71.)



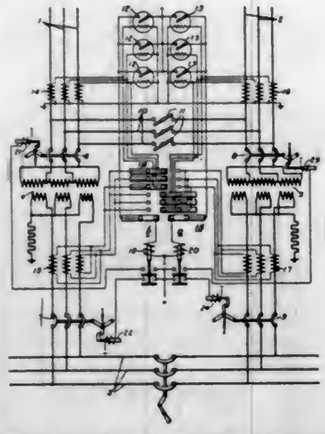
1. A shoe having an innersole, said innersole being provided with a concavity extending longitudinally thereof from a point at the ball line to the toe portion thereof.

1,693,399. GRATING STRUCTURE. HARRY NAGIN, Pittsburgh, Pa., assignor to Tri-Lok Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 19, 1926. Serial No. 130,139. 11 Claims. (Cl. 189—43.)



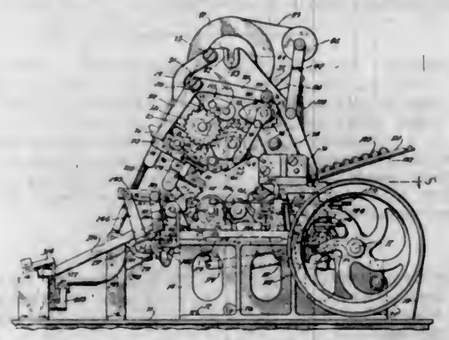
1. A grating having a nosing along one edge thereof, the nosing having a separate roughened tread member whose top surface is substantially flush with the tread surface of the grating.

1,693,400. FURNACE WALL AND BRICK THEREFOR. OSCAR NYGAARD, Saugus, Mass., assignor to Bernitz Furnace Appliance Company, Boston, Mass., a Corporation of Massachusetts. Filed July 16, 1925. Serial No. 44,030. 11 Claims. (Cl. 110—75.)



1. A furnace wall comprising a rear section and a vertically corrugated front section with an air space between said sections, and laterally directed holes leading from said air space through said front section to the front surface of the wall.

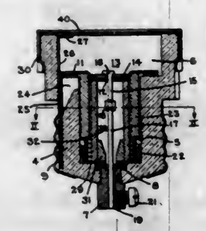
1,693,401. TELEPHONE CIRCUITS AND APPARATUS. ALEXANDER NYMAN, Wilkinsburg, and FRANK CONRAD, Pittsburgh, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 27, 1922. Serial No. 556,834. 2 Claims. (Cl. 179—1.)



2. The combination with a telephone circuit, of a sound-wave translating device for interchanging energy between said circuit and sound waves, said device embodying a vibratory element having a natural frequency of vibration whereby the ratio of the interchange of energy is largely increased at frequencies approximating said natural frequency in accordance with a resonance curve, and a parallel-resonant circuit serially included in said telephone circuit, said parallel-resonant circuit comprising parallel-connected paths having inductive and capacitive reactances and resistance such as to produce a resonance curve substantially corresponding, in tuning and in sharpness of tuning, to the resonance curve of said sound-wave translating device, whereby the amplitudes of an electrical quantity in said telephone circuit and the amplitudes of the corresponding sound waves are substantially proportional for all frequencies within the range of the apparatus.

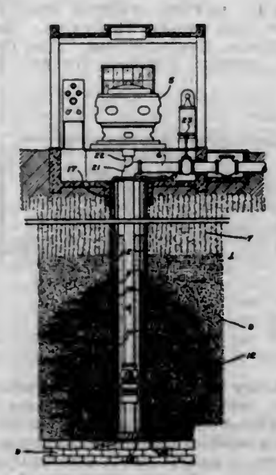
1,693,402. RELAY SYSTEM. ALFRED J. A. PETERSON, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 27, 1925. Serial No. 18,893. 6 Claims. (Cl. 175—294.)

1. A system comprising a plurality of transmission circuits, a transformer in each of said circuits, differential means including relays for protecting said transformers, circuit-interrupters for altering the relation of said circuits and transformers, and means for altering the connections of said relays in accordance with the operation of said circuit-interrupters.

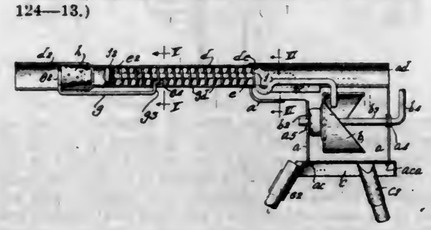


1,693,403. WRAPPING MACHINE. BRUNO RADTKE, Libertyville, Ill., assignor to Mills Novelty Company, Chicago, Ill., a Corporation of Illinois. Filed July 19, 1926. Serial No. 123,443. 39 Claims. (Cl. 93—3.)

1. A wrapping machine, comprising a support for the articles to be wrapped, means for positioning wrappers upon said support, means operating in timed relation to said last-mentioned means for depositing the articles to be wrapped upon said wrappers, means for folding the wrappers around said articles, and means for closing the packages thus formed including devices acting upon the ends of the wrappers in axial direction to tightly close said ends against the contents of the package, said last-mentioned means comprising successively acting closing elements movable as a unit toward and from the package.

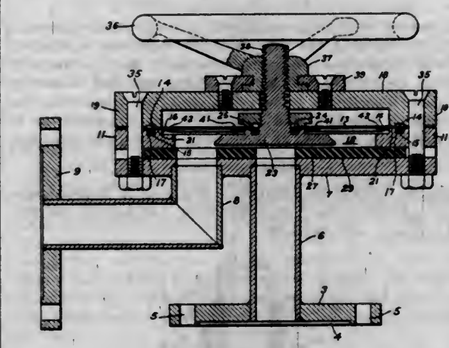


1,693,404. THERMAL CUT-OUT. MAURITS J. SANDIN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 23, 1923. Serial No. 614,381. 5 Claims. (Cl. 200—123.)



1. A cutout for electric circuits comprising a pair of relatively movable terminal members, biasing means tending to move said members apart, a casing for enclosing the terminal members and a composite renewable thermal-responsive element for conductively connecting the members and for releasably opposing said biasing means comprising a pair of heating conductors connected respectively to the terminal members and having their free ends releasably soldered to one another by a metal fusible at a relatively low temperature.

1,693,405. APPARATUS FOR CLEANING WELLS. JESSE H. SANFORD, Jr., Pittsburgh, Pa., assignor to Guaranteed Water Engineering Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 20, 1927. Serial No. 185,157. 1 Claim. (Cl. 166—1.)

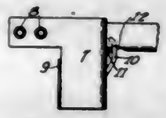


A well structure comprising a well pipe, pumping means disposed in the well pipe for drawing fluid from surrounding strata and discharging the fluid through the well pipe, a screen surrounding the well pipe, a flushing pipe outside the screen, the flushing pipe having a bottom terminal with a discharge orifice therein for restricting the end of the pipe and through which solid particles entering the pipe may be ejected, a plurality of jets in the pipe at intervals therealong for directing streams of fluid into said strata in a direction counter to the movement of fluid toward said well pipe and a filter disposed in the flushing pipe between a source of flushing fluid and the jets, the combined areas of the openings in the jets and the bottom terminal having a relation to the cross-sectional area of the flushing pipe such that fluid ejected from the several openings is maintained under pressure by a fluid head in the flushing pipe.

1,693,406. TOY MACHINE GUN. WILLIAM F. SCHMIDT, Wyandotte, Mich., assignor to All Metal Products Company, Wyandotte, Mich., a Corporation of Michigan. Filed Aug. 29, 1927. Serial No. 216,068. 2 Claims. (Cl. 124—13.)

1. In an apparatus of the kind described, a stamping having two complementary parts adapted to be bent to bring the edges of said parts together to form a casing and having registering apertures in said edges, a part of each of said apertures being in one edge and the other part in the other edge, and an operating part having a shaft, said shaft being engaged by the registering parts of said apertures, a base plate having apertures therein, and lugs extending from the other edges of said parts and engaging in the apertures in said base plate.

1,693,407. VACUUM VALVE FOR RECTIFIERS. ERROL B. SHAND, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 15, 1926. Serial No. 141,783. 3 Claims. (Cl. 251—31.)



1. A substantially vacuum-tight valve comprising a metallic valve flange having a centrally disposed opening and a non-centrally disposed opening therein, metallic passageways communicating with said openings, respectively, a raised metallic flange disposed around the periphery of said flange, a flexible metallic diaphragm having its outer edge soldered to a point removed from the inner

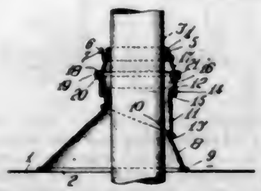
edge of the top surface of said raised flange for making a vacuum-tight joint therewith, a valve cover-plate having a downwardly depending peripheral flange clamped tightly against said diaphragm to hold the same against the inner portion of the top surface of said raised flange to relieve said soldered joint from mechanical strains due to the vacuum and the flexing of the diaphragm, a centrally disposed valve-head carried by said diaphragm, a lining of yieldable material interposed between said valve-head and said flange and attached to one of the same for making a substantially vacuum-tight joint when the valve is closed, and an external valve-gear for moving said valve-head.

---

1,693,408. SUPPORT FIXTURE FOR HANGINGS OR FOR CLOTHES HANGERS. LAURENCE A. SMITH, Kansas City, Mo. Filed Aug. 10, 1927. Serial No. 211,998. 4 Claims. (Cl. 156—23.)

4. In a device of the character described, a pair of telescoped channel shaped members forming a rod, one of said members having a line of apertures in its bottom, a tongue on one end of the other member adapted to project through any one of said apertures to produce toggle engagement between the members, each member being provided at its outer end with an aperture, and pressure contacting members arranged at the ends of the rod and each provided with a ledge to support the rod, and a tongue arranged on each pressure contacting member and engaging one of the apertures in the outer end of the rod for detachably connecting the rod to the pressure contacting members.

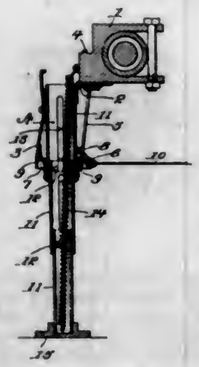
---



1,693,409. METHOD OF MAKING CUSHION SOLID TIRES. LEON N. SOUTHMAYD, Springfield, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Apr. 18, 1923. Serial No. 632,810. 1 Claim. (Cl. 18—55.)

A method of making cushion solid tires, which comprises partially building the tire around a rigid core having an external projection preventing closing of the tire material around the core, partially vulcanizing the tire, removing the core, inserting a liquid-containing bag, completing the building of the tire, and completing the vulcanization of the tire while said bag is filled with liquid under pressure.

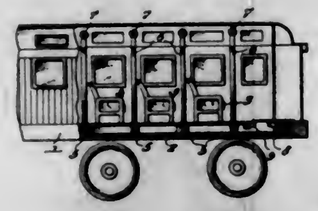
---



1,693,410. ROOF FLASHING. WILLIAM B. STEPHENSON, Chicago, Ill. Filed Mar. 19, 1928. Serial No. 262,742. 5 Claims. (Cl. 285—31.)

1. A roof flashing comprising a flat metal base plate adapted to be mounted on the roof, a soft metal collar adapted to be clamped about a pipe, and a sleeve connecting the plate and collar, the sleeve consisting of a plurality of annular sections, two of the sections overlapping so that they are capable of free telescopic movement one into the other, and a second connection between two of the sections permitting relative tilting movement between these members to accommodate different inclinations of the pipe with relation to the base plate.

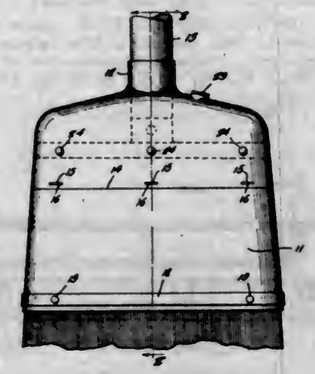
---



1,693,411. ADJUSTABLE POST FOR SUPPORTING AN AUTOMOBILE AXLE. MILTON C. SUPAN, Mineral, Calif. Filed Oct. 5, 1927. Serial No. 224,239. 1 Claim. (Cl. 248—41.)

A device of the class described comprising a clamp adapted to be fastened to an axle of a vehicle, a telescopic post hingedly connected with the clamp, means for holding the post in extended position, latch means for holding the post in inoperative and operative position and spring means for collapsing the post after the holding means are released and for moving the post to inoperative position after the latch means are released.

---



1,693,412. SAFETY DEVICE FOR PASSENGER COACHES AND OTHER VEHICLES. GEORGE WASHINGTON TAYLOR, Evansville, Ind. Filed Oct. 29, 1927. Serial No. 229,649. 3 Claims. (Cl. 105—345.)

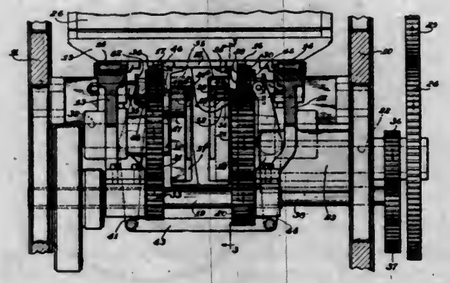
1. In a safety device for passenger coaches and other vehicles, the combination with an enclosing coach body, of hangers located inside of the coach-body at the sides of the vehicle, a movable platform suspended by said hangers and having a passage-way or aisle and provided with seats for passengers, said hangers being adapted to swing and the platform to shift inside of, and in relation to, the enclosing coach-body in the direction of the length of the vehicle when the movement of the vehicle is arrested.

1,693,413. HOLDER FOR MOPS OR BROOMS. ROSCOE C. TARTAR, Liberty, Ky., assignor of one-third to Luther W. Sopp and one-third to James B. Allen, Liberty, Ky. Filed Oct. 13, 1926. Serial No. 141,378. 2 Claims. (Cl. 15—177.)

1. In a device of the character described, a hollow broom housing having a portion cut away on one side thereof, and having apertures adjacent an edge of the cut away portion, a section having fixed lugs adapted to be detachably connected in said apertures, a clamping band carried by said housing and adapted to hold the removable section in clamping position, and means interiorly of said housing and section for holding the fibers of a mop or the straw of a broom.

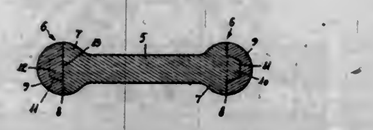
---

1,693,414. GUN. CHARLES GORDON TOLLIVER, Jonben, W. Va. Filed Apr. 9, 1927. Serial No. 182,467. 1 Claim. (Cl. 124—14.)



A gun, a firing pin slidably mounted within the barrel therefor, a plunger shaft carried by the firing pin being adapted for simultaneous movement therewith within an enlarged bore communicating with the gun barrel, a compression spring encircling the firing pin and having its ends disposed between one end of the plunger shaft and the intersections between the gun barrel and enlarged bore to check recoil action, arms obliquely disposed upon the barrel, an elastic band connected to the free ends of the arms and passed through an appropriate portion of the shaft, a trigger mechanism adapted to hold the firing pin against the tension of the elastic band and arms precedent to discharging a projectile from the gun barrel, and a spring pressed finger projected within the barrel being adapted to prevent accidental discharge of projectiles.

---



1,693,415. MECHANICAL MOVEMENT. BURT F. UPHAM, Brookline, Mass., assignor to Miller Saw-Trimmer Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 14, 1925, Serial No. 75,160. Renewed June 9, 1928. 11 Claims. (Cl. 74—98.)

3. In a mechanical movement, a reciprocable body, a pair of rotary wrist-pins for effecting the reversing of the movement of said body at the ends of the travel of the latter, and reversing shoes carried by said body and co-operating with said wrist pins, each of said shoes being placed at an angle of less than 90° to the plane of reciprocation of said body, and being disposed mainly on that side of the longitudinal center of said body which is opposite to the end at which the reversal it effects occurs and to extend oppositely to the other in a direction transversely of the movement of said body.

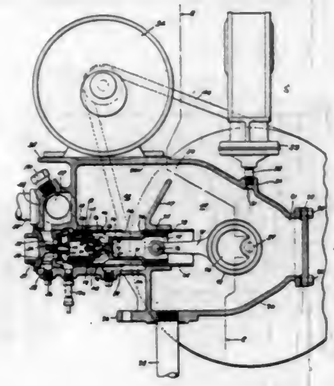
---

1,693,416. ROCKER BEARING. LESHER W. VAN BUSKIRK, Clinton, N. J. Filed Mar. 26, 1926. Serial No. 97,625. 7 Claims. (Cl. 308—21.)

1. A device of the character described comprising a toggle member having abutments at opposite ends, and removable semi-cylindrical wear pieces seated against said abutments, with their semi-cylindrical surfaces exposed to seat in bearings for rocking motion therein.

---

1,693,417. FILTERING PROCESS. JUSTIN F. WAIT, New York, N. Y. Filed Dec. 21, 1922, Serial No. 608,346. Renewed May 18, 1928. 6 Claims. (Cl. 210—191.)

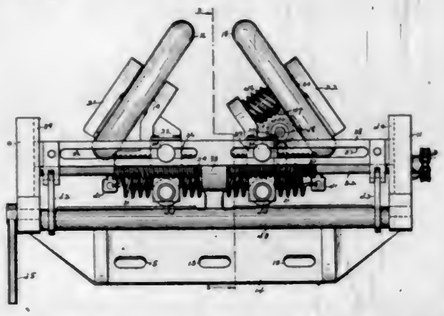


1. A method of filtering and also separating an organic component from an inorganic body in the filter cake, consisting in subjecting material in the filter to pressure of vapors of a volatile substance in which the organic component is soluble and removing the organic component by passing said vapors through the filter cake and subsequently recovering the materials passing through the cake.

---

1,693,418. PUMP. CLARENCE WARNER, Dayton, Ohio, assignor to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed May 3, 1926. Serial No. 106,206. 12 Claims. (Cl. 103—178.)

1. A pump comprising, in combination, a container for receiving fluid under pressure, a cylinder associated with



said container; a piston in said cylinder for forcing fluid into said container; a cross head in said container adapted

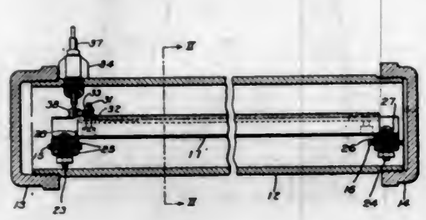
to be lubricated by the pumped fluid; means for connecting the piston and cross head, and means in said container for actuating said cross head.

---

1,693,419. TIRE-BUILDING MACHINE. GEORGE F. WIKLE, Milwaukee, Wis., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed May 13, 1925. Serial No. 30,010. 8 Claims. (Cl. 154—10.)

1. A device of the character described comprising a pair of rolls adapted to be forced against the tread portion of a tire casing and means driven by the contact of said rolls and the casing to positively separate said rolls at a uniform rate.

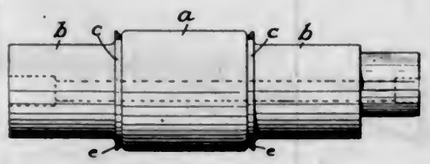
---



1,693,420. ICE-CREAM CONTAINER. KENTNER L. WILSON, Miller, S. Dak. Filed Nov. 11, 1926. Serial No. 147,739. 4 Claims. (Cl. 229—7.)

1. A container provided at one end with an opening, a follower arranged within the container at said end thereof, a stick for advancing the follower and adapted to be passed through said opening into contact with the follower, a closure for the other end of the container, and tabs carried by the container with which the stick is removably engaged to serve as a handle for the container.

---

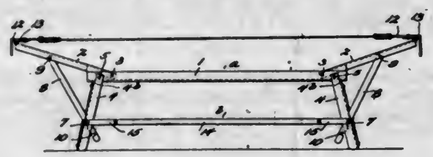


1,693,421. INCASED HEATING UNIT. JAMES C. WOODSON, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 31, 1927. Serial No. 179,730. 3 Claims. (Cl. 219—19.)

1. In an incased heater, the combination with a tubular metal casing, end closure members therefor, a heating unit within said casing and water-proof terminal members at one end of said casing, of a ground terminal member secured against said casing by said terminal members.

---

1,693,422. ROLL AND PROCESS OF MAKING SAME. JAMES R. ADAMS, Hatboro, Pa. Filed Dec. 24, 1926. Serial No. 156,836. 9 Claims. (Cl. 80—58.)



9. A roll for rolling metal comprising a hardened body having ends of a diameter less than the body joined to the body by a sloping portion, roll necks of a less diameter than the body, shouldered portions of less diameter than the body and of greater diameter than the necks and joining the ends of the body and necks, and shrunk-on rings of metal softer than the body embracing the shouldered portions and of a width substantially equal to the width of the shoulders and of a maximum outside diameter substantially equal to the diameter of the body, each ring having a face sloping from its maximum diameter towards the body of the roll and of a minimum outside diameter substantially equal to the minimum diameter of the end of the roll body, thus producing circumferential grooves of any desired cross section.

---

1,693,423. FOLDING COT. FRANK A. ADKINS, Chicago, Ill., assignor to Champion Folding Furniture Company, Waukegan, Ill., a Corporation of Illinois. Filed June 15, 1926. Serial No. 116,232. 4 Claims. (Cl. 5—117.)

1. A folding cot comprising side rails and leg composed of channel bars, each side rail comprising a relatively long central section and two end sections pivoted within the central section near its ends, said central section having its channeled side facing upward and said end sections having their channeled sides facing downward when the cot is set up, the legs having forked ends pivoted externally to the end portions of the central section and having their channeled sides facing inward when the cot

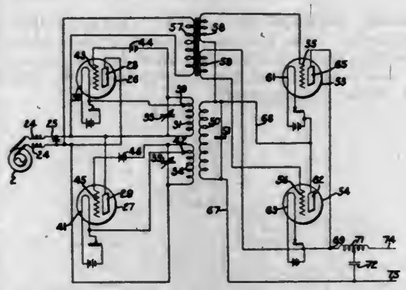
is set up, said end sections adapted to fold within the central sections and the legs adapted to fold over the backs of the central sections, and ties connecting the legs associated with each side rail, each tie comprising a relatively long central section and pivotally connected end sections, the latter pivoted to the legs, said ties adapted to fold parallel with the legs and side rails.

---

1,693,424. HEEL AND ARCH SUPPORT. HARRY H. AHERN, Newport News, Va. Filed Apr. 5, 1928. Serial No. 267,489. 3 Claims. (Cl. 36—71.)

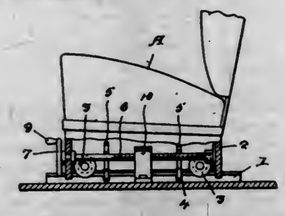
1. In a device of the character stated, an upper plate and a lower plate having a contour to fit the rear portion of a shoe, said plates being secured together at their outer peripheral edges but spaced apart with respect to each other at their intermediate and rear portions, and a bottom spring secured to and extending rearwardly from the front portion of said bottom plate and having its free end adapted to bear upwardly thereagainst, there being aligning depressions for a heel in said upper and lower plates extending rearwardly from the free end of said spring.

---



1,693,425. MICROPHONE. JOSEPH EUGENE AIKEN, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 2, 1925. Serial No. 41,178. 6 Claims. (Cl. 179—131.)

1. A microphone comprising a diaphragm, stretching means and damping means therefor, a supporting frame cooperating with both thereof, resistor cups and granules supported thereby, positioned on opposite sides of said diaphragm and spaced therefrom by a distance less than the radius of said granules.



1,693,426. TRANSMISSION DEVICE. CHESTER T. ALLCUTT, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 20, 1923. Serial No. 681,875. 4 Claims. (Cl. 171—97.)

4. The method of delivering power from an alternating current line which consists in generating high-frequency oscillations modulated at the frequency of said line, rectifying said oscillations and reversing the direction of rectification at each half-cycle of said line frequency.

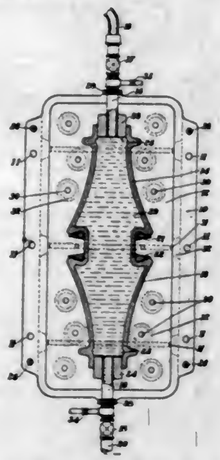
---

1,693,427. ADJUSTABLE SEAT. CARL A. ANDERSON, Irwin, Pa. Filed Dec. 29, 1926. Serial No. 157,848. 1 Claim. (Cl. 155—14.)

In a motor vehicle, a track connected with the floor thereof and formed of Z-shaped rails, a base for the driver's seat of the vehicle, hangers connected with the base, rollers at the lower ends of the hangers engaging under faces of the rails, flanged wheels carried by the base and engaging the upper faces of the rails with the flange engaging the inner edges of the rails, a screw shaft carried by the base and having one end extending through the front thereof, a bracket on the floor of the vehicle having a threaded hole therein through which the shaft passes and a handle on the outer end of the shaft for rotating the same.

---

1,693,428. STOVEPIPE. ADEN R. ATTERBERY and IRA J. BLALOCK, Stapleton, Nebr., assignors of one-third to Clarence E. Mills, Stapleton, Nebr. Filed Mar. 10, 1927. Serial No. 174,175. 1 Claim. (Cl. 126—309.)



A stove pipe section longitudinally split, thereby forming adjacent edges, one of said edges being provided with an outwardly curved flange, said flange being formed by bending the material onto itself thereby forming a double thickness, the last named flange having an integral flange concentric with the pipe and engaging the inner side of the

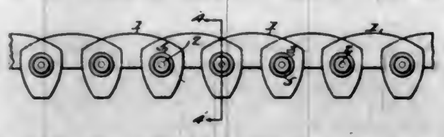
pipe under the other edge thereof, said last named edge having an outwardly curved flange, said outwardly curved flange terminating in a rib, and a channeled member in which the rib and first mentioned flange is disposed.

---

1,693,429. METHOD OF CASTING. ARTHUR O. AUSTIN, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed July 2, 1926. Serial No. 120,090. 17 Claims. (Cl. 25—156.)

1. The method of casting comprising the steps of filling a mould of porous material with a ceramic ware slip, placing hydraulic pressure on the slip within the mould to facilitate passage of water from said slip to said mould, permitting a layer of ceramic material to be deposited on the inner wall of said mould, removing the slip from the mould, and filling the interior of the mould with a fluid under pressure to compress the deposited layer and render it more nearly uniform.

---



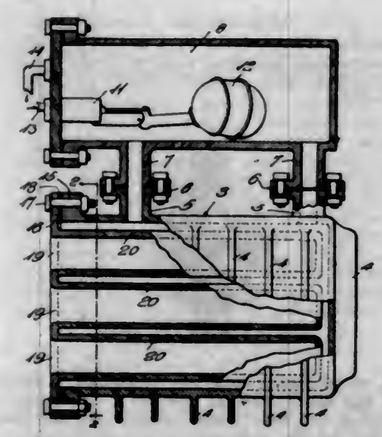
1,693,430. CASING FOR ELECTRICAL APPARATUS. ARTHUR O. AUSTIN, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed June 25, 1924. Serial No. 722,204. 4 Claims. (Cl. 220—85.)

1. In combination a housing, a conductor bushing extending through the top of said housing, a baffle forming a compartment surrounding said conductor bushing and providing an air pocket adjacent to the top of said housing outside of said compartment, a dielectric fluid disposed within said housing and sustained in said compartment by gas pressure within said pocket, a supplemental tank disposed outside of and below the top of said housing and having dielectric fluid therein, the surface level of which is below the surface level of the fluid in said housing, and a pipe opening into said air pocket and having one end thereof disposed below the liquid in said supplemental tank.

---

1,693,431. DRIVE CHAIN. EDWARD F. BEHNING, Detroit, Mich., assignor to Diamond State Fibre Company, Bridgeport, Pa., a Corporation of Delaware. Filed Jan. 10, 1927. Serial No. 160,263. 1 Claim. (Cl. 74—64.)

A power chain comprising a plurality of links formed of a non-metallic material comprising a hardened synthetic resin, metallic pins for pivotally securing said links together, and sleeves interposed between the pins and the links and also composed of a non-metallic body comprising a hardened synthetic resin.



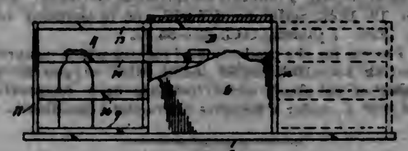
---

1,693,432. THERAPEUTICALLY-ACTIVE AROMATIC COMPOUND CONTAINING MERCURY IN A LATERAL CHAIN AND PROCESS OF MAKING THE SAME. MAX BOCKMÜHL, Hochst-on-the-Main, and ADOLF SCHWARZ, Frankfort-on-the-Main, Germany, assignors, by mesne assignments, to Winthrop Chemical Company, New York, N. Y., a Corporation of New York. Filed May 5, 1923, Serial No. 637,020, and in Germany May 12, 1922. 12 Claims. (Cl. 260—13.)

1. The process of preparing therapeutically active mercury compounds which comprises mercurating aromatic compounds which contain an unsaturated alkyl radical and a group which renders the aromatic compound water-soluble.

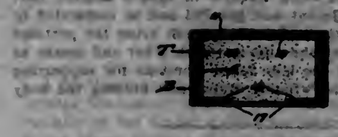
---

1,693,433. REFRIGERATING UNIT. FORREST LE GRAND BRYANT, Johnson City, N. Y., assignor to Bryant Electric Refrigerator Corporation, Wilmington, Del., a Corporation of Delaware. Filed Aug. 11, 1927. Serial No. 212,253. 1 Claim. (Cl. 62—95.)



A refrigerating unit comprising an outer shell to contain a refrigerant, said shell being provided with external heat-conducting fins, with a nipple at its top for connection with a float tank, and with a removable front wall, the latter being formed with spaced openings through which to insert fluid-freezing pans, and a plurality of inner pan-receiving shells having open front ends integrally joined to said front wall and communicating with said openings, said pan-receiving shells being spaced from all other walls of said outer shell and from each other, permitting each inner shell to be substantially surrounded by the refrigerant.

---



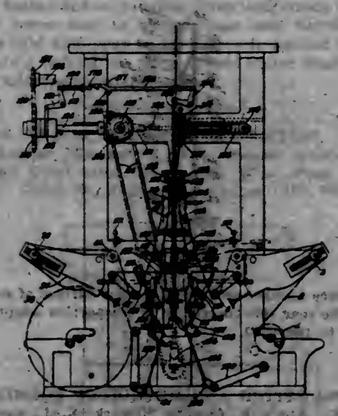
1,693,434. MILK-BOTTLE CONTAINER. TITO L. CAVALLI, Benicia, Calif. Filed May 19, 1927. Serial No. 192,383. 1 Claim. (Cl. 232—31.)

In a bottle holder a baseboard, sideboards secured to said baseboard, a topboard connecting said sideboards, a slidably crate-like structure positioned between said sideboards and slidable on said baseboard, said crate-like structure being of less length than said baseboard, the ends of said crate-like structure being of a length equal to the width of said baseboard, a division board positioned in said box-like structure, the ends of said end pieces projecting beyond the sides of said crate-like structure for the purpose of acting as stops when said crate-like structure is moved on said base-board.

---

1,693,435. POWDER BOX. THOMAS J. CLARKE, Jamestown, N. Y. Filed Mar. 10, 1927. Serial No. 174,265. 2 Claims. (Cl. 229—3.)

1. In a powder box, an inner container comprising an inner frame consisting of opposed side and end walls connected in a powder-tight manner at the corners of the frame, an easily rendible top sheet extending over said frame and having integral flaps which extend downwardly against the outer faces of said side and end walls, and an outer frame surrounding said inner frame and flaps, said outer frame consisting of opposed side and end walls connected at the corners of the frame and having integral flaps at their lower edges which are turned inwardly under the lower edge of the inner frame and project horizontally inward from said inner frame; and an outer container snugly receiving said inner container, said outer container having a fixed bottom section co-operable with said horizontal flaps in forming the box bottom, and a removable cover giving access to said easily rendible top sheet.



---

1,693,436. WEB-REPLENISHING MECHANISM. CARL E. DRANGE, Plainfield, N. J., assignor to Isabella Scott and David J. Scott, executors of the estate of Walter Scott, deceased, doing business under the name of Walter Scott & Company, Plainfield, N. J. Filed Oct. 21, 1925. Serial No. 63,817. 20 Claims. (Cl. 242—58.)

1. The method of joining two webs of flexible material which consists in: accumulating a surplus in a replenishing

web to thereby start rotation of its web roll while holding the leading end of the web stationary, attaching an employed web to the leading end of the replenishing web, and then dissipating the surplus by gradually speeding up the leading end of the replenishing web.

---

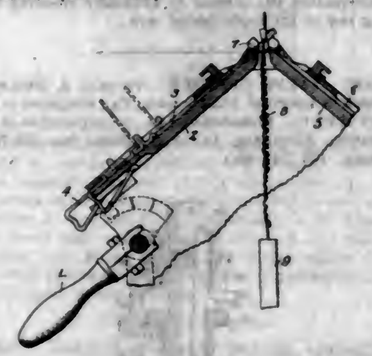
1,693,437. VALVE GRINDER. THOMAS J. FOGLEY and GEORGE O. LEOPOLD, Philadelphia, Pa., assignors to North Bro's M'f'g Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 12, 1926. Serial No. 128,794. 3 Claims. (Cl. 74—50.)

1. The combination in a valve-grinder, of a frame having bearings; a spindle and a shaft mounted in the bearings, the shaft being at right angles to the spindle; two bevel pinions loose on the spindle; a flanged spool loose on the spindle and located between the two bevel pinions; a bevel gear on the shaft meshing with the pinions; a cam on the shaft engaging and reciprocating the spool as the shaft is turned; a longitudinally movable key located in the spindle and moved longitudinally by the spool, the pinions having internal key-slots; and means for projecting the key to engage one or the other of the pinions, one end of the key having a longer dwell in its hub than the other key so that the spindle will be moved progressively forward as it is reciprocated.

---

1,693,438. SANITARY WALL TILE. ALFRED GOODELL, Rockford, Ill. Filed Aug. 10, 1927. Serial No. 212,052. 6 Claims. (Cl. 189—85.)

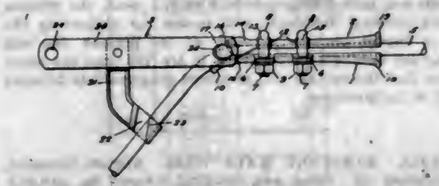
1. A wall covering of the class described including a member embodying a substantially flat surface and parallel por-



tions disposed to extend at right angles to said flat surface, certain of said parallel surfaces including securing means,

and a brace member secured to the flat surface of said member on the rear side thereof having a portion adapted to be secured to the wall.

---



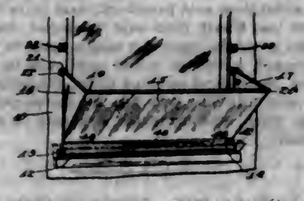
1,693,439. STITCH AND METHOD OF FORMING THE SAME. ALBIN F. GOETZE, Newark, N. J., assignor to Morgan Knitting Mills, Inc., Newark, N. J., a Corporation of New Jersey. Filed May 4, 1927. Serial No. 188,758. 3 Claims. (Cl. 66—69.)

2. The method of forming a stitch in knit fabric comprising knitting a piece of fabric on a flat machine continually racking the knitting machine during the knitting operation, permanently discarding certain needles on one side of the machine, forming and discarding at spaced intervals a row of loops on the side of the machine having said discarded needles, and subjecting the fabric to a weight acting longitudinally on the fabric until all of the loops are unravelled on the side where said loops have been discarded.

---

1,693,440. ANCHOR CLAMP. KENT A. HAWLEY, Baltimore, Md., assignor to Locke Insulator Corporation, Baltimore, Md., a Corporation of Maryland. Filed Apr. 20, 1927. Serial No. 185,249. 14 Claims. (Cl. 24—135.)

4. In a clamp of the character described, the combination of a pair of members adapted to receive a conductor between them, means for holding said members in clamping engagement with respect to the conductor, outwardly extending trunnions on one of the members, and links pivotally engaged with said trunnions, said trunnions being located substantially in line with the longitudinal axis of the conductor and having heads projecting beyond one side thereof, said links having openings to receive said heads and to be overlapped thereby upon relative longitudinal movement of the assembled clamping members with respect to the links.



---

1,693,441. PROCESS FOR THE PRODUCTION OF IODATES. FRIEDRICH AUGUST HENGLEIN, Cologne-Deutz, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Apr. 19, 1927, Serial No. 185,077, and in Germany June 23, 1926. 7 Claims. (Cl. 23—85.)

4. Process for the production of iodates which comprises contacting an alkali metal iodide with oxygen in the presence of an alkali metal hydroxid at a temperature above 100° C. under a pressure above one atmosphere.

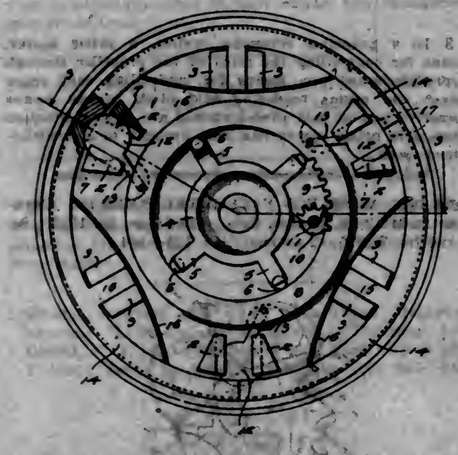
---

1,693,442. WINDOW VENTILATOR. GEORGE SAMUEL HENRITZY, Hazleton, Pa. Filed Jan. 6, 1923. Serial No. 611,059. 4 Claims. (Cl. 98—99.)

1. A ventilator for windows comprising a flexible body portion comprising a front and sides and a foldable frame for and secured to the respective parts of the body portion, the frame portions being foldable in such a manner that their axes are adjacent nad parallel and so correlated to the body portion that when folded will bring the portions of body portion flat and adjacent each other and means at the inner ends of the side frame portions for supporting the frame from the window casing and holding the body portion taut.

---

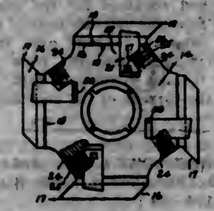
1,693,443. LIGHTING FIXTURE AND THE LIKE. DONALD HOLT, Chicago, Ill. Filed May 23, 1927. Serial No. 193,555. 4 Claims. (Cl. 240—73.)



1. In a device of the class described the combination with a pedestal member, of a vertical pin pivotally mounted

and extending through the pedestal member, means for securing said pin in place while permitting free rotation thereof with respect to the pedestal member, the central portion of said pin being serrated, there being a transversely extending socket in the pedestal member having its inner end communicating with the serrated portion of said pin, a pin within said socket, a spring tending to force said pin inwardly against the vertical pin aforesaid, the inner end of said pin being relatively sharpened to engage the serrations aforesaid and thereby resist the rotation of the pin with respect to the pedestal while permitting such rotation under applied force of sufficient magnitude, a shoulder on said spring pressed pin, an abutment on the pedestal member serving as a stop for said shoulder to limit inward movement of the spring pressed pin, and suitable joint and extension members supported by the upper end of said pin, substantially as described.

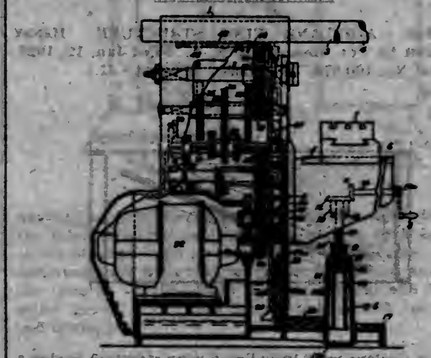
---



1,693,444. AUTOMOBILE FRICTION BRAKE. JESSE HOPKINS, Denver, Colo. Filed Oct. 13, 1927. Serial No. 226,012. 1 Claim. (Cl. 188—78.)

A friction brake comprising a frame, a ring mounted for turning movement thereon, shoes mounted for movement radially of the frame, guides for directing the movement of the shoes, springs disposed transversely of said guides and connected with the shoes, said shoes being provided at their ends with grooves, grooved lugs mounted upon the frame, disks mounted for sliding and turning movement in the grooves of the lugs and having portions entering the grooves of the shoes and arms carried by the disks and pivotally connected with the ring.

---

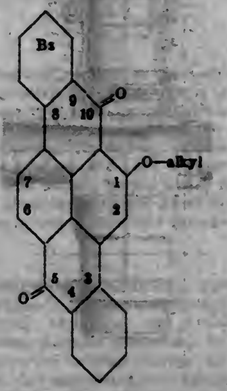


1,693,445. CUTTER HEAD. WINSLOW JONES, Seattle, Wash. Filed Jan. 24, 1927. Serial No. 163,190. 4 Claims. (Cl. 144—224.)

1. A cutter head embodying a face; an aperture in said face located in close proximity to the forward edge of said face; a clamping means operatively disposed in said aperture having a bevelled seat; a knife; a clamping screw hole in said clamping head beneath the cutting edge of said knife; and a clamping screw operatively disposed in said screw hole to bear against said bevelled seat, whereby said knife may be held securely against said face and operate to hold the parts of said cutter head on each side of said aperture together.

---

1,693,446. MACHINE-TOOL ORGANIZATION. EDWARD J. KEARNEY, Wauwatosa, Wis., assignor to Kearney & Trecker Corporation, West Allis, Wis. Filed Feb. 17, 1926. Serial No. 88,874. 10 Claims. (Cl. 90—11.)

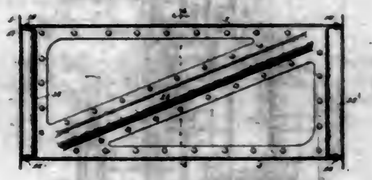


1. In a machine tool, the combination of a hollow column, a knee vertically movable thereon, an elevating screw projecting downwardly from said knee, a nut in threaded engagement with said screw and fixed with said column and means for lubricating said nut including a lubricant channel communicating with the interior of said hollow column.

---

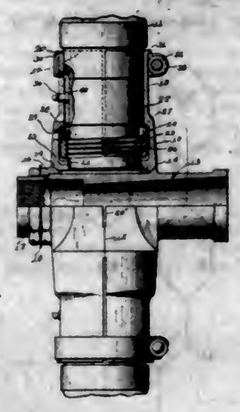
1,693,447. DERIVATIVES OF DIBENZPYRENEQUINONE AND PROCESS OF PREPARING THE SAME. GEORG KRÄNZLEIN, KARL ZAHN, PAUL OCHWAT, and MARTIN CORELL, Hochst-on-the-Main, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 28, 1926, Serial No. 157,609, and in Germany Dec. 30, 1925. 22 Claims. (Cl. 260—61.)

17. As new products, compounds of the following formula:



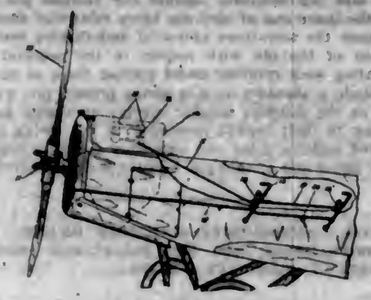
wherein the hydrogen atoms of the Bs-nucleus may be substituted, said compounds being rather difficultly soluble in organic solvents to a yellowish-brown solution in concentrated sulfuric acid to a bluish-red solution, and giving cherry-red vats which dye cotton fast yellow tints.

1,693,448. PRODUCTION OF METALLIC COMPOUNDS OF DYESTUFFS. HANS KRZIKALLA, Mannheim, and WERNER MÜLLER, Ludwigshafen-on-the-Rhine, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Apr. 1, 1927, Serial No. 180,334, and in Germany June 15, 1926. 8 Claims. (Cl. 260—12.)



1. The process of producing metallic compounds of such dyestuffs as are difficultly soluble in water which consists in treating such a dyestuff with an aqueous solution of a metallic compound capable of reacting therewith in the presence of an organic solvent capable of dissolving the dyestuff and miscible with water.

1,693,449. AIRPLANE-WING STRUCTURE. HENRY JOSEPH LE PUL, Hempstead, N. Y. Filed Jan. 12, 1927. Serial No. 160,676. 4 Claims. (Cl. 244—31.)



1. An airplane wing including a wing structure having a plurality of connected sections, each of said sections comprising an outer covering structure, end plates and a plurality of interior braces, each of the interior braces including a pair of identically formed bracing members, means for securing said members together, each of said members presenting a rectangular frame having a flange at the top and bottom, and a diagonal bracing web formed with a pressed out stiffening member.

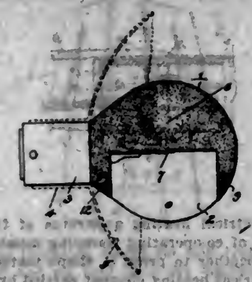
1,693,450. AIRCRAFT PROPELLER. ERNEST G. MCCAULEY, Dayton, Ohio. Filed Jan. 30, 1925. Serial No. 5,837. 31 Claims. (Cl. 170—162.)

1. In a propeller, a hub having a blade socket for receiving the end of a propeller blade, the inner walls of said socket being provided with a recess for receiving an abutment member therein, said member providing means for balancing said propeller.

1,693,451. PROPELLER-CONTROL MECHANISM FOR REVERSIBLE OR ADJUSTABLE PITCH PROPELLERS. ERNEST G. MCCAULEY and FRANK W. CALDWELL, Dayton, Ohio; said Caldwell assignor to Standard Steel Propeller Company, a Corporation of Delaware. Filed Oct. 7, 1922. Serial No. 593,023. 18 Claims. (Cl. 244—25.)

3. In a propeller reversing system, a prime mover, means for controlling the pitch of the propeller through a predetermined arc, means for controlling said prime mover and means rendering said pitch control means operative beyond said predetermined arc in one direction when said prime mover has been brought to a predetermined speed.

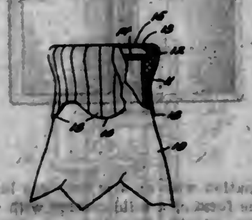
1,693,452. MASK FOR FACIAL TREATMENTS. CATHARINE MCCUNE, Denver, Colo. Filed Nov. 28, 1925. Serial No. 71,925. 2 Claims. (Cl. 128—164.)



1. A mask for facial treatment comprising a body portion consisting of a single piece of porous closely woven, smooth, thin, textile fabric possessing an elastic characteristic and formed with a chin receiving pocket, an inset neck covering part, a bridge piece providing a nose covering part, a part for covering the forehead and temples, a pair of cheek covering parts provided with openings for the passage of the ears, a bridge piece providing a covering for the upper lip, said mask having separate openings for the mouth and nose and openings for the eyes, tongues extending upwardly from the extreme ends of the temple covering parts and adapted to pass over the top of the head, tongues extending rearwardly from the cheek covering parts and tongues connected with and extending rearwardly from the corners of the neck covering part.

1,693,453. INCANDESCENT LAMP. FRANK C. MCELROY, Columbus, Ohio. Filed Nov. 4, 1925. Serial No. 66,871. 1 Claim. (Cl. 176—34.)

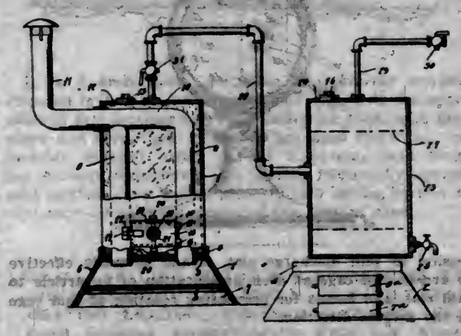
As a new article of manufacture, an incandescent lamp having the glass bulb portion thereof formed to provide transparent and substantially translucent zones, said translucent zone extending over substantially one-half of the full area of the bulb, the major length of the edges of said translucent zone being situated in a plane co-extensive with the major longitudinal axis of the lamp, said translucent zone being extended to completely surround



the rear portion of the glass bulb of the lamp where the latter is joined at the lamp base, and the forward portion of said transparent zone being extended to cover an area substantially equal to that of the rear translucent area of the lamp.

1,693,454. PENCIL. MARVIN E. MCGILL, Madison, Ga. Filed Mar. 22, 1928. Serial No. 263,837. 4 Claims. (Cl. 120—83.)

1. A pencil comprising a lead and a surrounding casing of a substance maintaining its rigidity under body temperatures but melting readily upon the application of flame thereto.



1,693,455. COVER-ALL CAP. ALEXANDER MELDRUM, Syracuse, N. Y., assignor to Smith-Lee Company, Inc., Oneida, N. Y., a Corporation of New York. Filed Apr. 1, 1926. Serial No. 99,149. 4 Claims. (Cl. 215—38.)

1. A bottle closure adapted for use by covering the mouth of a bottle and being plaited into a skirt around the neck thereof, and comprising a substantially flat blank of pliable and nonrigid paper-like material of considerable tensile strength, an adhesive applied to said blank on the inner surface of the intended plaits only, on parts of the blank which are to be positioned below the mouth of the bottle, said adhesive being of such character and quantity as to cause adherence of the plaits to, in and of themselves, produce an operative binding and sealing tion, in the skirt of the applied cap, around the bottle neck without reliance upon rigidity of the paper or its adherence to the bottle neck.

1,693,456. APPARATUS FOR EXTRACTING GAS AND OIL FROM WASTE. ALEXIS NASSE, Detroit, Mich. Filed Oct. 7, 1926. Serial No. 140,127. 1 Claim. (Cl. 202—6.)

An apparatus of the character set forth, comprising a vertical retort, a hollow base for the retort and having a combustion chamber, a flue arranged horizontally within the upper end of the retort, the flue being spaced from the top of the retort and passing through a side thereof, a smoke stack extending from the outer end of the flue, flues arranged vertically within the retort and communicating at their upper ends with the horizontal flue and

having their lower ends extended through the bottom of the retort into the combustion chamber, a tank adapted to contain water and provided with a valved outlet, a pipe communicating with the upper end of the retort and with the tank at about midway between the top and bottom walls thereof, and a pipe communicating with the upper end of the tank.

1,693,457. SHADE RAISER. GAETANO PAGANO, Brooklyn, N. Y., assignor of one-fifth to Gaetano Sofia and one-fifth to Salvatore Straziare, Brooklyn, N. Y. Filed Mar. 4, 1927. Serial No. 172,758. 1 Claim. (Cl. 156—28.)

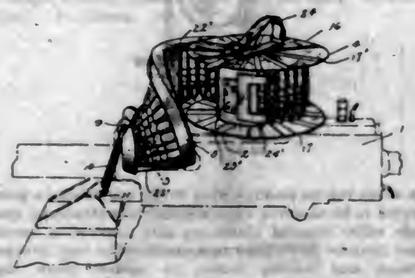
A shade raising and lowering device comprising a bracket adapted to be mounted upon a supporting structure, spaced shade roller bearing plates on said bracket, a sprocket wheel adapted to be fixed to a shade roller and interposed between said bearing plates, an endless chain engaging said sprocket wheel with one lead of the same disposed between said bearing plates, and a roller journalled in said bracket above said sprocket wheel to space the other lead of said chain away from said sprocket wheel.

1,693,458. DISPENSING CABINET. BENJAMIN G. PATTERSON, Oklahoma City, Okla. Filed Apr. 29, 1927. Serial No. 187,541. 13 Claims. (Cl. 312—73.)

1. A dispensing machine comprising in combination a stationary cylindrical casing having a discharge slot therein, a base for supporting the casing in horizontal position, a cylindrical dispensing cage concentrically and rotatably mounted within said casing, means for storing in bulk within said cage the articles to be dispensed, means cooperating with said cage and cylindrical casing

as said cage is rotated to select and transport a succession of stored articles in units of a predetermined number up and around the casing and to present them in succession to said discharge slot, means normally effective to arrest said cage at each presentation of an article to said slot, and means for preventing rotation of said cage in the reverse direction.

---



1,693,459. HOSE-NOZZLE GUARD. CHARLES L. PAULUS and ROBERT KAUCH, Dayton, Ohio. Filed Mar. 5, 1925. Serial No. 13,408. 3 Claims. (Cl. 221—100.)

1. In combination with a hose having a discharge nozzle, a guard in the form of a wheel mounted on and surrounding said nozzle to maintain the nozzle above the plane of said hose when the hose is laid down or dropped.

---

1,693,460. AMMUNITION-FEED MECHANISM FOR MACHINE GUNS. CHARLES L. PAULUS, Dayton, Ohio, and ROBERT KAUCH, U. S. Army. Filed Aug. 2, 1926. Serial No. 126,593. 15 Claims. (Cl. 89—33.)

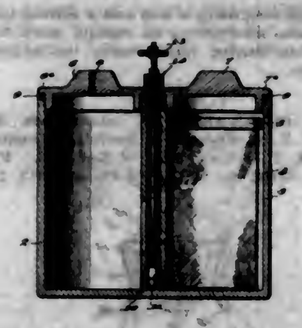
1. The combination, in an ammunition feed mechanism for a gun having a gun cover of a spiral ammunition guideway and a rotary ammunition holder mounted upon the gun cover.

---

1,693,461. PROCESS FOR THE PRODUCTION OF THE CONDENSATION PRODUCTS OF PHENOLS WITH ALDEHYDES. GRIGORI PETROFF, Moscow, Union of Soviet Socialist Republics. Filed Apr. 23, 1927, Serial No. 186,182, and in Union of Soviet Socialist Republics Dec. 20, 1926. 2 Claims. (Cl. 260—4.)

1. In the process of preparing phenol-formaldehyde condensation products, the step which comprises condensing a phenol with formaldehyde in the presence of the sodium salt of toluene-sulphone-chloramide.

---



1,693,462. WAVING IRON FOR HAIR. JOHN P. POLNASZEK, Minneapolis, Minn., assignor of one-half to Peter Strsok, Minneapolis, Minn. Filed May 28, 1927. Serial No. 194,969. 6 Claims. (Cl. 219—24.)

6. In an electrical heating apparatus of the class described, a pair of co-operating clamping members adapted to be moved together to press in shape material therebetween, an electrical heating element carried by one of said members and adapted to be connected to a source of electricity, a switch carried by one of said members, means for holding said switch in closed position when said clamping members are disposed in spaced relation, whereby said members will be heated, and means for automatically opening said switch when said clamping members are moved together, the residual heat of said clamping members being sufficient to press and form said material.

---

1,693,463. CARBIDE LAMP. WALTER PROCKTER, Huntington, W. Va. Filed Jan. 8, 1927. Serial No. 159,956. 1 Claim. (Cl. 48—35.)

The combination with an acetylene gas lamp, of a body member in the form of a solid casting with upright closed chambers arranged side by side to provide a water container and a carbide holder, a conduit connecting the lower ends of said chambers, a valve for controlling said conduit, a stem attached to said valve and extending upwardly between said chambers through the top of said casting, a foraminous carbide basket mounted in said carbide holder, a gas chamber formed in said casting with a passage connecting it with the carbide chamber, filtering material located in said gas chamber at the entrance of said passage, and a burner connected with said gas chamber.

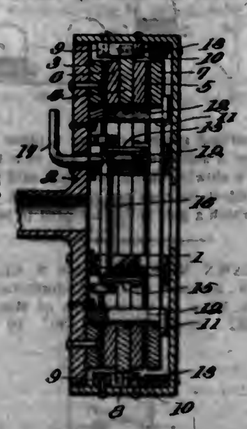
---

1,693,464. CONVERTIBLE GARMENT. ROY J. QUANTZ, Pittsburgh, Pa. Filed Feb. 12, 1927. Serial No. 167,792. 1 Claim. (Cl. 2—86.)

A convertible garment comprising a body open at the front and having an opening at the back extending from the bottom thereof to a point adjacent the middle thereof, said last named opening dividing the lower portion of the garment into side portions, means on the edges of said side portions for connecting them together to form legs, a crotch piece in the shape of an equilateral diamond shaped quadrilateral normally folded double when worn

as a coat and fastening means on said crotch piece edges when opened and on said body for connecting the same together in the crotch of the garment.

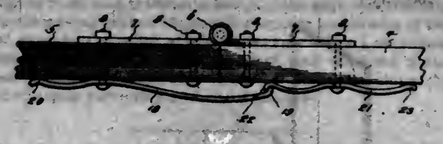
---



1,693,465. METHOD OF SECURING RAILWAY RAILS TO THEIR SUPPORTS. PAUL RAMY, Brussels, Belgium. Filed Aug. 20, 1924, Serial No. 733,178, and in Belgium Aug. 27, 1923. 4 Claims. (Cl. 238—311.)

1. A method of securing rails to their sleepers consisting in rigidly securing each rail at independent points in its central part to a series of sleepers whereby the creeping pressure is distributed over a large surface of ballast and in slidably securing the ends of each rail by ordinary means to the other sleepers.

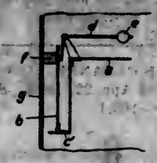
---



1,693,466. VEHICLE BRAKE. HENRY W. RODENBECK, Pasadena, Calif. Filed June 24, 1926. Serial No. 118,858. 1 Claim. (Cl. 188—72.)

In a vehicle brake, an axle housing having a braking surface, a brake drum cooperating with said housing to form a brake casing, a friction disc, a braking disc, said friction and said braking discs being rotatably and axially movable within said casing, combined guides and stops for the friction disc secured to the brake drum, combined guides and stops for the braking disc secured to the axle housing, and means for holding said braking and friction discs against said stops when in inoperative position.

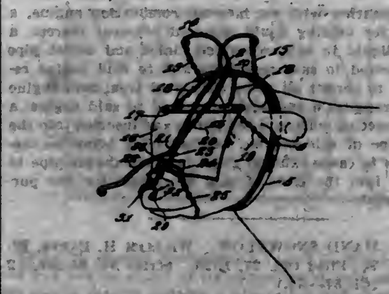
---



1,693,467. HARROW DRAWBAR. GEORGE W. SCHULZ, Clark, S. Dak. Filed July 21, 1927. Serial No. 207,416. 5 Claims. (Cl. 55—84.)

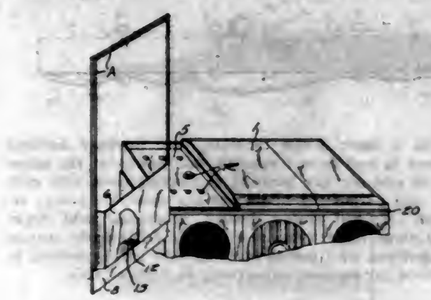
5. In a draft device including two drawbar sections disposed in end to end relation, and means at the upper sides of said sections hingedly connecting them with each other and permitting folding of one upon the other; releasably engaged spring devices underlying said drawbar sections respectively and bearing frictionally against said sections, and means pivoting said spring devices to said draw-bar sections respectively on vertical axes.

---



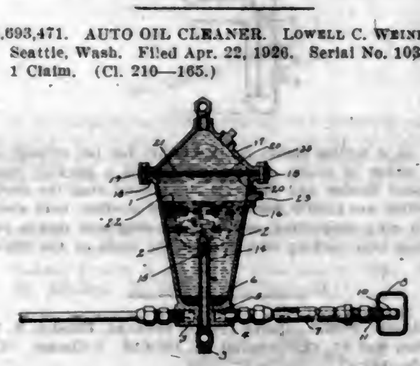
1,693,468. SEALING PISTON FOR RESERVOIRS FOR THE STORAGE OF GAS, STEAM, OR EASILY-EVAPORATING LIQUIDS. FRIEDRICH SCHÜRMANN, Dortmund, Germany, assignor to the Firm Aug. Klonee, Dortmund, Germany. Filed Jan. 5, 1927, Serial No. 159,230, and in Germany Jan. 6, 1926. 9 Claims. (Cl. 220—26.)

1. In a sealing-piston for reservoirs for the storage of gas, steam or easily evaporating liquids a packing ring, a closed flexible and dilatable sheet-metal ring the parts of which are tightly connected to one another, said sheet metal ring supporting said packing ring and means for pressing said packing ring against the walls of the reservoir.



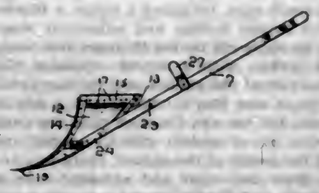
---

1,693,469. POKE. CORTE JUDSON SPENCER, Dundee, N. Y. Filed May 11, 1927. Serial No. 190,610. 3 Claims. (Cl. 119—142.)



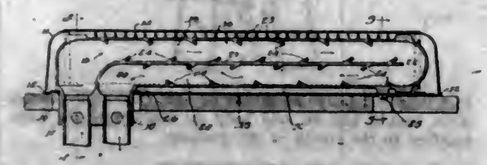
1. An animal poke, including a collar, a blinder for the eyes of the animal flexibly and adjustably supported by the collar, an angle rod having its inner arm comparatively short and formed with a lateral extension which rests against the face of the animal, and further provided with an offset eye, a nose ring for the animal, a flexible connection between the eye and the nose ring, the outer arm of the rod being out of contact with the animal and extended beyond the mouth of the animal, oppositely arched rods supported from the collar and arranged over the horns of the animal, and flexible means connecting said arched rods with the angle rod.

1,693,470. RADIO RECEIVING CABINET. ADOLPH A. THOMAS, New York, N. Y. Filed Feb. 2, 1924, Serial No. 690,116. Renewed July 19, 1928. 20 Claims. (Cl. 250—33.)



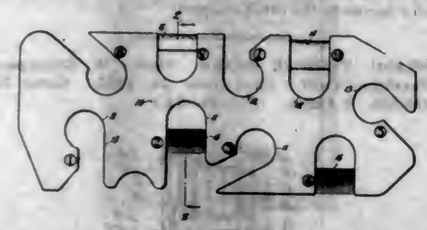
5. A radio cabinet having a molding along the outer top edge thereof and normally arranged in a horizontal position on the cabinet as part of its outer structure, said cabinet having a compartment for a radio set, means for adjustably mounting said molding on the cabinet in such a way that the molding may be raised into vertical position and then swung horizontally without projecting over said compartment in any of its vertical positions, and a receiving antenna in said molding.

1,693,471. AUTO OIL CLEANER. LOWELL C. WEINBERG, Seattle, Wash. Filed Apr. 22, 1926. Serial No. 103,786. 1 Claim. (Cl. 210—165.)



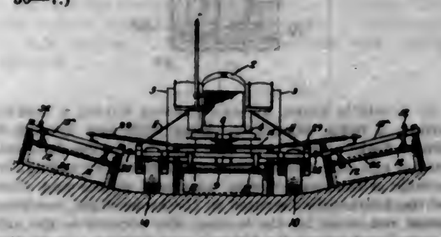
In combination with an internal combustion engine, a receptacle for holding liquid mounted adjacent thereto, a cleansing liquid in said receptacle, inlet and outlet pipe lines connected to said receptacle and to said engine respectively, to permit oil to be circulated from said engine thru said receptacle and again returned to said engine, a deflector coacting with said receptacle and inserted into the exhaust pipe of said engine, said deflector being so constructed as to cause exhaust gases in said exhaust pipe to be carried into the base of said receptacle for the purpose set forth.

1,693,472. HAND SNOWPLOW. WILLIAM H. BATTY, Elmira, N. Y. Filed Oct. 27, 1925. Serial No. 65,249. 2 Claims. (Cl. 37—53.)



1. A hand snow plow including a plow element having the front face thereof curved from front to rear throughout its entire area, the curvature of one side of the face being greater than that of the other and the medial portion presenting in vertical section throughout the width thereof, a series of constantly diminishing curves, whereby to cause the snow to be deflected to the side of the plow element, a plurality of independently removable and replaceable spacing lugs carried by the ground engaging portions of the plow element, and a handle carried by said plow element.

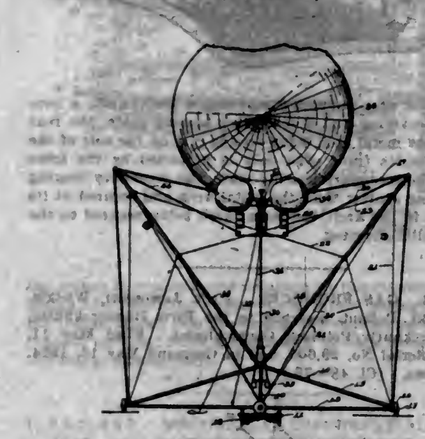
1,693,473. AUTOMOBILE HEATER. THOMAS BOVEY, Chicago, Ill. Filed Sept. 18, 1924. Serial No. 738,544. 2 Claims. (Cl. 257—136.)



2. An automobile heater comprising a casing consisting of sheet-metal concavo-convex ends and a perforated shell connecting said ends and supported thereby whereby to space the casing from the floor, a longitudinally extending radiator enclosed within said casing having inlet and outlet passageways extending therethrough, stubs connected to the respective passageways and passing through the floor of the automobile, and a plate to which underneath portions of the radiator are secured, said plate having a slightly raised portion whereby to provide an insulating air space above the floor.

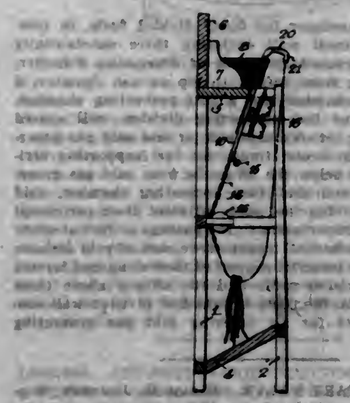
1,693,474. GAME APPARATUS. FREDERICK LELAND BURT, Weehawken, N. J. Filed Nov. 28, 1927. Serial No. 236,244. 4 Claims. (Cl. 273—36.)

1. A golf putting game including a plate adapted to be laid flatly upon a suitable surface and of a thickness sufficient to block a slowly rolling golf ball, said plate having a plurality of object notches cut in different edges defining pockets into which a golf ball is adapted to be putted.



1,693,475. LAWN MOWER. JOHN S. CLAPPER, Minneapolis, Minn., assignor to Toro Manufacturing Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Nov. 7, 1921. Serial No. 513,530. 10 Claims. (Cl. 56—7.)

1. A tractor having a forwardly projecting frame, a section having supporting wheels and a pivotal connection with said projecting frame to form a truck therefor, sections having hinged connections with the ends of said truck section for following an incline when said truck section is running on level ground, mowing reels connected with said sections, and said end sections being readily removable from said truck section.



1,693,476. AIRSHIP MOORING MAST. MATT Q. CORBETT, Dayton, Ohio. Filed Apr. 24, 1925. Serial No. 25,686. 14 Claims. (Cl. 244—2.)

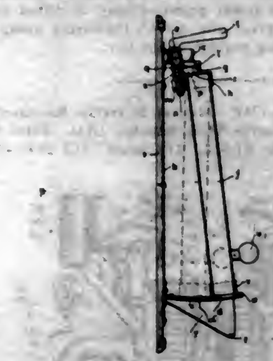
1. A mooring mast for airships comprising a support, a swing therein, means for attaching an airship thereto, and buffer means rotatably mounted on said swing to cushion the ship's hull on said swing from movement relative thereto.

13. A portable mooring mast for lighter-than-air craft comprising a unitary movable support, a swing therein, buffer means rotatably and centrally mounted on said swing providing a cushion for said craft and means interconnecting said buffer means serving to attach said craft to said swing.

1,693,477. TOWEL RACK. GEORGE E. COLLINS, St. Louis, Mo. Filed Dec. 10, 1925. Serial No. 74,587. 6 Claims. (Cl. 312—37.)

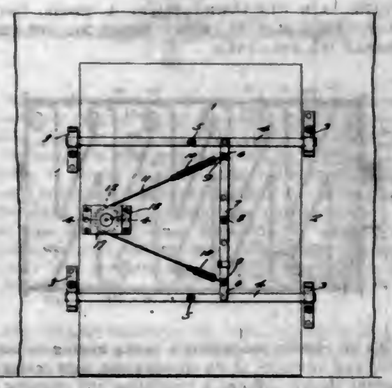
1. A towel retaining member for a rack of the class described comprising a bar adapted to pass freely through a towel grommet and having a main portion and a portion extending transversely thereof, there being a downwardly facing shoulder on one edge of said main portion spaced slightly from said transverse portion, the edge opposite said shoulder being curved about said shoulder lengthwise of the bar whereby the width of said bar is kept below a maximum dimension so that a towel grommet may be tilted about said shoulder as a pivot and moved therefrom along the transversely extending portion of the bar.

1,693,478. PIPE CLAMP. MARVIN B. DAVIS, Kansas City, Mo., assignor to George Krell, Sapulpa, Okla. Filed Aug. 21, 1925. Serial No. 51,563. 11 Claims. (Cl. 294—113.)



1. A clamp comprising a frame including hingedly connected members adapted to close about an object to be clamped, slips loosely mounted in the frame and means on the frame and engageable with an object to be clamped to interrupt travel of the slips with the frame, the frame being operable on the slips to effect radial closing movement thereof upon continued movement of the frame.

1,693,479. AIR CLEANER. HARRY A. EDGAR, Luverne, Minn. Filed May 15, 1926. Serial No. 109,435. 6 Claims. (Cl. 183—111.)

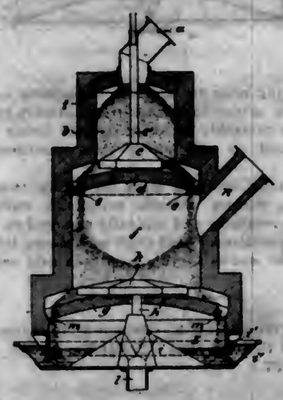


1. An air cleaner comprising a casing having an inlet at one end and an outlet at its opposite end, said casing having means therein defining a separating and cleaning compartment and a dust receiving compartment and a pair of sets of baffles, the baffles of each set being opposed, each set of baffles being made up of a plurality of substantially V-shaped baffle plates, one leg of each V-shaped baffle plate terminating in a curl connected with the adjacent leg of the adjacent baffle, and forming dust precipitating pockets, the V-shaped baffle plates of the other set being staggered and co-acting to define a zigzag passageway through the cleaner, the means which divides the casing into the cleaning and dust-receiving compartments having discharge openings leading from the pockets into the dust receiving compartment.

1,693,480. DISTRIBUTING DEVICE FOR SOLID SOAP. IGNATZ GONIK, Ljubljana, Kingdom of the Serbs, Croats, and Slovenes. Filed Feb. 16, 1927, Serial No. 168,702, and in Germany June 17, 1926. 8 Claims. (Cl. 146—60.)

1. A soap dispensing device, comprising a soap container pivotally mounted at one end, a fixed member normally closing the free end of the container for supporting the soap carried by the latter, a knife mounted between the fixed member and the path of the free end of the container to sever the soap supported on said member during the movement of the container in one direction, and means connected with the pivoted end of the container for limiting the normal movement of the container relative to the fixed member.

1,693,481. BAR DOOR LOCK. SAMUEL A. HARPER, Jonesboro, La. Filed Feb. 1, 1928. Serial No. 251,185. 3 Claims. (Cl. 70—74.)

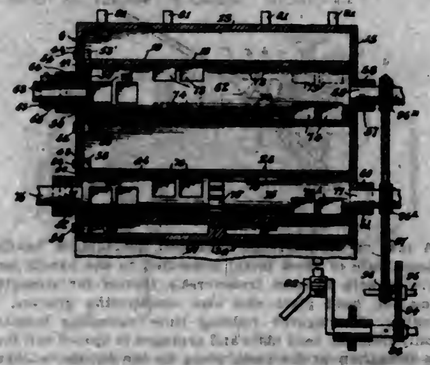


1. The combination with a door and a frame to which the door is hinged, together with oppositely disposed keepers on the frame, and lock bars pivoted to the door and swingable into the keepers, of links pivotally connecting the lock bars, an actuating bar centrally pivoted to the door and to which the links are connected, a lock including a drum, a flexible element trained around the drum, means connecting the ends of the flexible element to the ends of the actuating bar and for retaining the flexible element taut, and the drum for the lock being key actuated.

1,693,482. FOOT SUPPORT. PERCIVAL GEORGE HAMLYN HINDER, London, England. Filed May 29, 1926, Serial No. 112,549, and in Great Britain Apr. 1, 1926. 5 Claims. (Cl. 36—71.)

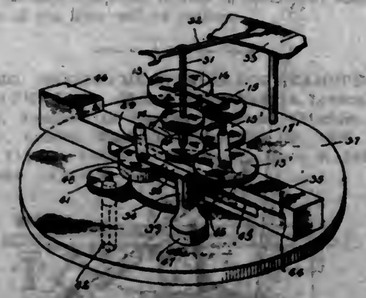
1. A foot arch support comprising a metal arch, a non-metallic covering and a secondary bearing plate, the rear edge of the metal arch being free to rest on the sole of the boot while its front edge only is protected by the front edge of the secondary bearing plate, the secondary bearing plate being shorter than the metal arch and secured at its rear end in the arch, the metal arch being secured to the non-metallic covering.

1,693,483. GAS PRODUCER. PAUL JAWORSKI, Wielkie-Hajduki, Poland, assignor to the Firm Bismarckhütte, Bismarckhutte/Polnisch Oberschlesien. Filed May 11, 1925, Serial No. 29,605, and in Germany May 13, 1924. 5 Claims. (Cl. 48—76.)



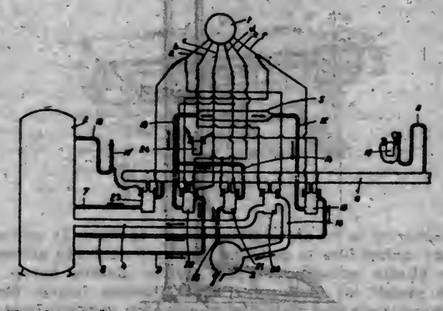
1. In a gas producer for finely divided fuels, in combination, a common wall enclosing three substantially cylindrical superposed chambers of decreasing diameter, and constituting from bottom to top an ash chamber, a gas generating chamber and a fuel preheating chamber, a first transverse fuel supporting division wall spaced below the off-set between said ash pit and said gas generating chamber, a second transverse fuel supporting division wall spaced below the off-set between said gas generating chamber and said fuel preheating chamber, said division walls having fuel ports adjacent their peripheral edges but being imperforate to the passage of fuel at other portions, and mechanical means above each of said division walls for moving material supported thereabove and formed between the division walls and the off-sets above them toward said ports, the ports in said first division wall also serving as inlets for air entering said gas generating chamber.

1,693,484. ROTARY VALVE. HIRAM M. JOHNSON, Toppenish, Wash. Filed Feb. 24, 1927. Serial No. 170,665. 6 Claims. (Cl. 123—190.)



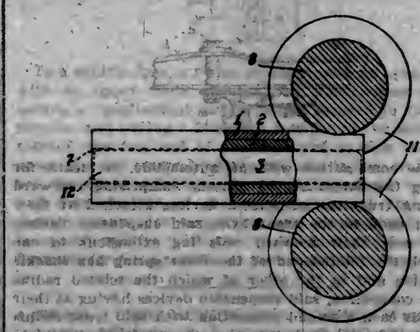
1. A rotary valve mechanism for internal combustion engines including rotors, primary and exhaust ports controlled by the rotors, sealing rings for the primary ports, a lubricating mechanism formed with channels and grooves whereby oil is conducted to, around, and from the sealing rings and rotors, and means whereby the excess oil on

the rotors is removed and returned to the crankcase, said means also providing a seal of the intake passageways on the intake stroke, and preventing the exhaust gases in the exhaust manifold from being forced by back pressure into the intake passageways.



1,693,485. MECHANICAL DIFFERENTIAL MOVEMENT AND TACHOMETER EMBODIMENT. GEORGE P. LUCKEY, Dayton, Ohio. Filed May 20, 1925. Serial No. 31,615. 12 Claims. (Cl. 264—9.)

5. A mechanical movement for obtaining relative angular change between two aligned members in a speed responsive device comprising a system mounted to rotate as a whole and consisting of a series of links arranged in a double superposed parallelogram form, a system of gears partly supported by said links in two adjacent planes and interconnecting said members, said system being mounted to rotate about the axis of said members, so that centrifugal force on one of said gears moves said links to vary the shape of the parallelogram, spring means resisting such change of parallelogram shape, counterbalancing weights for said gears to balance the centrifugal force of said gears about the axis of rotation of said system, and an operating means moved by relative angular change between said aligned members.



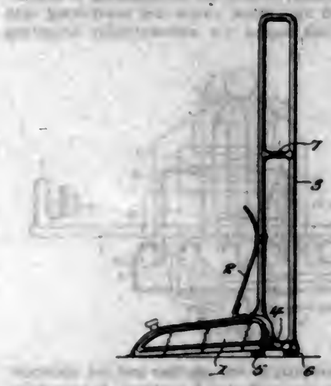
1,693,486. APPARATUS FOR TREATING WOOD WITH OZONE. GUSTAVE LYON, Paris, France. Filed Jan. 16, 1923, Serial No. 613,068, and in France Jan. 27, 1922. 2 Claims. (Cl. 99—12.)

2. Apparatus for seasoning wood and the like comprising a container, an ozone generator in communication therewith, an air drier in communication with said container and with said ozone generator, exhaust means leading from said container, means for varying the pressure in said container, means for maintaining a circulation of air in said apparatus, valves for controlling said communications, and means for automatically actuating

said valves independently of one another and for maintaining them in their open and closed positions for predetermined periods, said last named means comprising clock mechanism, a control drum operated thereby and having a plurality of contacts, and electromagnetic means for operating said valves and controlled by said contacts.

1,693,487. PROCESS OF HOLLOW STAY-BOLT MANUFACTURING. GEORGE HENRY MANSFIELD, Cuyahoga Falls, Ohio. Filed Mar. 7, 1925, Serial No. 13,909. Renewed Feb. 3, 1928. 8 Claims. (Cl. 80—62.)

1. The process of making hollow staybolt bars which consists in heating a hollow billet to rolling temperature, then inserting a refractory core in said billet, reducing said billet to the dimensions of staybolt iron, and extracting said core after said reducing operation.

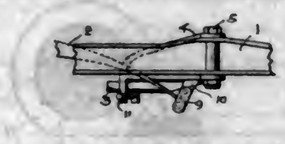


1,693,488. CEMENTING COMPOUND. JOHN MAYES, Port Austin, Mich., assignor to Mayes Brothers Tool Manufacturing Company, Port Austin, Mich., a Corporation of Michigan. Filed Mar. 10, 1927. Serial No. 174,412. 1 Claim. (Cl. 106—34.)

A compound capable of forming a quick-setting cement when combined with water consisting of molding plaster and litharge in the proportions of approximately eight to one, respectively, substantially as set forth.

1,693,489. DUSTPAN. BARNEY MCGILLAN, Green Bay, Wis. Filed Apr. 7, 1928. Serial No. 268,182. 2 Claims. (Cl. 65—20.)

1. A dust pan having an upright handle connected with the rear part thereof, said handle being of U-shape with



the end of one limb connected with the top part of the pan at the rear thereof, a projection at the rear of the pan connected with the end of the other limb, feet forming

members connected with the bottom of the pan at the rear thereof and a foot forming member connected with the lower end of that limb of the handle which is connected with the projection.

---

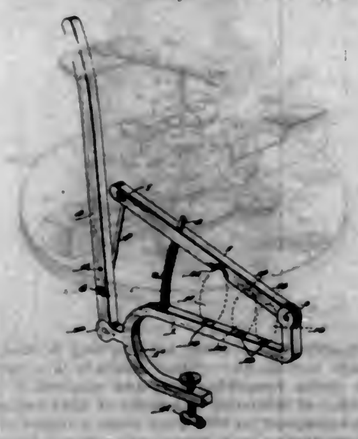
1,693,490. MEANS FOR LOWERING THE HEIGHT OF THE CHASSIS OF MOTOR VEHICLES. ELVIN D. MORTON and JACK BEWTT, Indianapolis, Ind. Filed June 12, 1925. Serial No 36,630. 2 Claims. (Cl. 267—54.)

1. The combination with an automobile, of means for lowering the height of the chassis, comprising rearward extending truss-like suspension devices attached at their forward ends to the front axle, said suspension devices having near their forward ends lug extensions to one of which the related end of the front spring has shackle connection and to the other of which the related radius rod has connection, said suspension devices having at their rear ends each a second connection with said front radius rods near the forward ends thereof and forming a rigid unit with the front axle and the front radius rods.

---

1,693,491. VIBRATOR FOR ALTERNATING-CURRENT RECTIFIERS. CLARENCE E. OGDEN, Cincinnati, Ohio. Filed Oct. 2, 1922. Serial No. 591,865. 12 Claims. Cl. 200—90.)

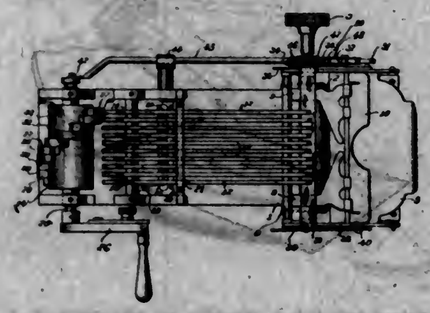
1. In a vibrating rectifier, the combination with a magnet and a contact point, of a vibrator comprising an armature, a vibrator spring mounted and having one of its ends secured on said armature, a contact point on the free end of said vibrator spring arranged to make contact with said first mentioned point, a tension member arranged to bear against said vibrator spring at a point approximately opposite the contact on said spring, and means for adjusting the tension of said member.



1,693,492. RAKE. NILS FREDRIK BERNHARD ÖSTBERG, Tureberg, Sweden. Filed June 21, 1924, Serial No. 721,583, and in Sweden June 25, 1923. 1 Claim. (Cl. 55—10.)

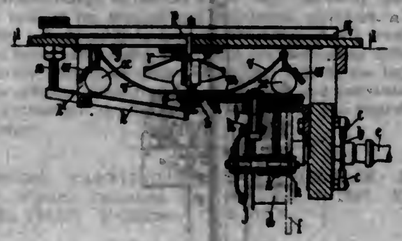
A rake of the character described, including a handle, a head plate of sheet metal connected to the handle and provided with furrows transversely thereof for strengthening the head plate and also constituting grooves, a plurality of elongated yielding tines extending longitudinally from the head plate and arranged in spaced and fan-like formation in the same plane as the handle, a channel-shaped member having flanged portions which are received in the grooves and are also provided with slots for accommodating the inner portions of the tines, and means for detachably clamping and fastening the channel-shaped member to the under surface of the head plate.

---



1,693,493. NUT-CRACKING MACHINE. EBER H. PATTON, Longwood, Miss. Filed Sept. 18, 1926. Serial No. 135,233. 2 Claims. (Cl. 146—13.)

1. A nut cracking machine comprising in combination a base bar having a standard at one end, and a U-clamp at its opposite end, a crusher bar pivotally connected at one end to said standard, a perforated lug projecting from the clamp end of the base bar, a handle pivotally connected at its lower end to said lug, said handle having a plurality of adjusting elements, a link pivotally connecting the free end of the crusher bar with the handle by said adjusting elements, said base bar and crusher bar provided with a plurality of opposing sockets to receive and longitudinally center various sized nuts, a guide post projecting upwardly from the base bar, and through an opening in the crusher bar, and a compression spring mounted on said guide post and between the base bar and crusher bar.

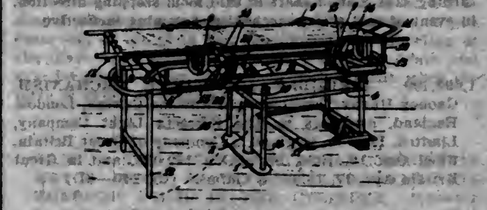


1,693,494. MACHINE FOR TESTING TYPEWRITING RIBBONS, CARBON PAPER, ETC. WINFIELD P. PEMBROKE, Rochester, N. Y., assignor to Kee Lox Manufacturing Company, Rochester, N. Y. Filed July 6, 1926. Serial No. 120,699. 8 Claims. (Cl. 73—51.)

1. A wear down testing machine for typewriting ribbons, carbons and the like comprising a platen, means for holding material to be tested in cooperation with the platen, an impact device for cooperating with the material and the platen, a lever carrying said impact device and having a resilient portion between the impact device and the pivot of the lever, said lever having a normal tendency to move toward the platen, a stop engaging said lever and limiting the movement of the lever toward the platen so that the resilient portion bends to permit the impact device to strike the platen, and means for moving said lever away from the platen, said means having provision for holding said lever against movement for a limited time to cause said lever to assume a definite position away from the platen on each operation thereof in order that successive strokes of the lever will be uniform.

---

1,693,495. DRIVING MECHANISM FOR GRAMOPHONES AND THE LIKE. ERNEST LOUIS RANKIN, London, England, assignor to Charles William Whitmore Hanbidge, London, England. Filed May 29, 1926, Serial No. 112,650, and in Great Britain June 4, 1925. 7 Claims. (Cl. 185—37.)



1. A spring motor mechanism for gramophones comprising a driving spring, a spindle driven by the said spring through sprocket gearing, a second spindle driven by the first mentioned spindle through bevel gearing, a longitudinally adjustable record table spindle rotated by the said second spindle and an elastic belt gearing for transmitting motion from said second spindle to the record table spindle.

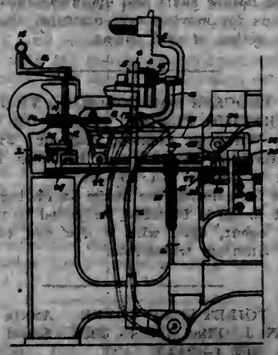
---

1,693,496. AUTOMOBILE BRANCARD. WILHELM FRANS RISSEVIS, Soekaboemi, Java, Dutch East Indies. Filed June 24, 1926, Serial No. 116,265, and in the Netherlands May 20, 1925. 3 Claims. (Cl. 5—82.)

1. A brancard support including a frame, leaf springs of semi-circular shape, mounted on said frame adjacent its opposite ends, the free ends of said springs being oscillatable in vertical planes, and by torsion, horizontally, clamping means for a brancard carried by the free ends of said springs, a pair of rigid arms for each spring, having a common pivotal connection and connected to said

springs at points at opposite sides of its arc of curvature, tending to inhibit torsional deflection of said spring, and a spring normally biasing said arms together axially of said pivotal connection, for controlling the degree of lateral torsional deflection permitted by said semi-circular springs.

---



1,693,497. VENTILATING DEVICE. RALPH ROLLO RUSSELL and JOHN STEPHEN WHITE, Paducah, Ky. Filed June 3, 1925. Serial No. 34,709. 1 Claim. (Cl. 98—2.)

In a vehicle door, a frame provided with an opening and with an upper cross member, the upper cross member having a longitudinal slot, a shield secured to the cross member and having a U-shaped member at the lower edge thereof, the free end of the U-shaped portion extending upwardly and received within the slot in the cross member, the shield including a portion which extends upwardly and over the top of the cross member, a transparent closure, means for supporting and moving said closure in spaced relation with the shield, said shield extending downwardly for a portion of the length of the opening.

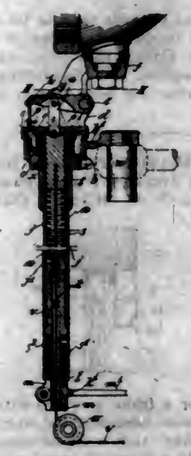
1,693,498. STOP MOTION FOR LOOMS. WILLIAM E. SMITH, Milltown, N. J., assignor to Gulbenkian Seamless Rug Company, New Brunswick, N. J., a Corporation of New Jersey. Filed Nov. 27, 1926. Serial No. 151,108. 4 Claims. (Cl. 139—345.)



1. In a stop motion, for looms having a lay and a power control element for stopping and starting the loom; the

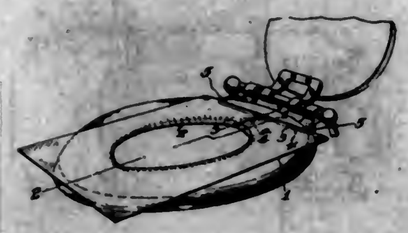
combination of a control shaft associated with said power control element; active mechanism tending to turn said control shaft in one direction to effect a stopping of the loom; restraining means for said control shaft; means operable by said lay for releasing said control shaft from said restraining means; and positive acting means for turning said control shaft in said loom stopping direction, in event of said active mechanism becoming ineffective.

---

1,693,499. DIRIGIBLE HEADLIGHT MECHANISM. GEORGE HENRY TREGLOWN and EDWARD CARTER, London, England, assignors to The Correcta Light Company, Limited, London, England, a Company of Great Britain. Filed Oct. 16, 1926, Serial No. 142,032, and in Great Britain Apr. 17, 1926. 6 Claims. (Cl. 240—61.)

1. A swivel lamp for steerable vehicles, comprising a tubular casing, means for supporting said casing on the vehicle, a hollow shaft revoluble within said casing, a carrier revoluble upon the upper end of said casing and fixedly connected to the upper end of said shaft, a crank arm secured to the lower end of said hollow shaft the free end of which crank arm is adapted for engaging the steering mechanism of the vehicle in one direction of movement thereof to turn said hollow shaft, resilient means adapted to return said shaft after operation, a platform pivotally mounted on a substantially horizontal pivot on said carrier, means for removably supporting a lamp on said platform, a spring constantly operative upon said platform, and a flexible member extending centrally through said hollow shaft and operative through suitable control means for moving said platform about its pivot against the action of said spring.

---



1,693,500. PROCESS FOR COLORING THE IMAGE ON PHOTOGRAPHIC PLATES, FILMS, OR THE LIKE. GEOFFREY WHEELER, London, England. Filed Jan. 19, 1927, Serial No. 162,204, and in Great Britain Feb. 27, 1926. 1 Claim. (Cl. 95—88.)

A process for coloring the image on photographic films, wherein the image is bleached, subjected to the action of a reducing agent, dyed with a dye and toned with a solution of titanium trichloride.

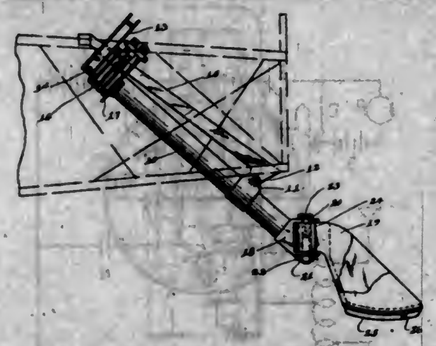
---

1,693,501. TOILET-SEAT COVER. ANNIE E. CABNER, Camden, N. J. Filed Apr. 13, 1928. Serial No. 269,740. 4 Claims. (Cl. 4—243.)

1. A temporary sanitary toilet seat cover comprising a seat cover body having an opening therein substantially corresponding to the ordinary seat opening, said cover body having a folded part connected to the body of the

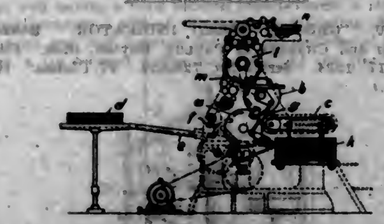
seat cover, a wire mounted in the fold of the folded part, said wire having curved ends, to be bent to engage with the toilet seat or the hinged seat cover.

---



1,693,502. APPARATUS FOR GRIPPING PIPES, RODS, OR THE LIKE. MARVIN B. DAVIS, Kansas City, Mo., assignor to George Krell, Sapulpa, Okla. Filed Apr. 30, 1926. Serial No. 105,740. 10 Claims. (Cl. 24—249.)

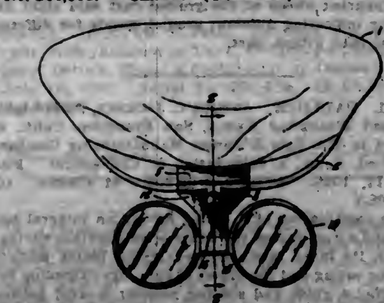
1. In well drilling apparatus, a table, a plurality of jaws associated with said table having gripping means mounted therein, means for moving said jaws relative to said table comprising a member embracing said jaws through which said jaws extend and means for raising and lowering said member, and means connecting said table with said jaws, whereby said jaws move toward or away from each other as said jaws are moved relative to the table.



1,693,503. TAIL SKID FOR AIRPLANES. CHARLES W. DWORACK, Dayton, Ohio. Filed Mar. 18, 1924. Serial 700,101. 2 Claims. (Cl. 244—2.)

1. In a tail skid for airplanes, a skid shoe having renewable ribs welded on the bottom surface thereof, one being welded longitudinally and another cross-wise of the bottom surface.

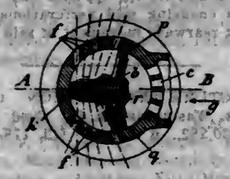
---



1,693,504. ROTARY PRINTING MACHINE. ALFRED FALLOT, Plauen, Germany; Harry Priester executor of said Alfred Fallot, deceased. Filed Feb. 7, 1924, Serial No. 691,268, and in Germany Feb. 14, 1923. 2 Claims. (Cl. 101—142.)

1. In an off-set printing machine, a plate cylinder, a blanket cylinder and an impression cylinder positioned so that the plane through the axes of the plate and blanket cylinders makes an obtuse angle with the plane through the axes of the blanket and impression cylinders, a feed table, an intermediate gripper for taking sheets from the feed table and passing them onto the impression cylinder, delivery mechanism arranged at that side of the impression cylinder opposite to the feed table and positioned at approximately the height of the axis of the impression cylinder.

---

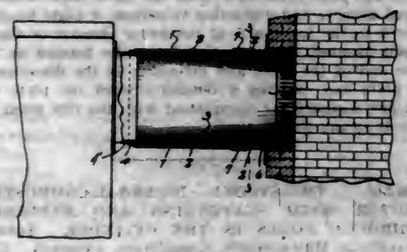


1,693,505. CARRYING DEVICE FOR GOGGLES. JOHN T. FISHER, Tarentum, Pa. Filed Feb. 7, 1927. Serial No. 166,531. 2 Claims. (Cl. 2—10.)

1. In combination, a cap having a peak and clamping means between the peak and the body of the cap comprising a male member and a coengaging female member, a plate U-shaped in cross section arranged over the visor and having its top provided with spaced openings through which the clamping means between the peak and body of the cap pass, a spring clip on the outer edge of the U-shaped member and depending therefrom, a plate hingedly secured to the inner end of the under element of the U-shaped member, a spring jaw integrally formed on the outer end of the plate and extending in the direction of the plate and exerting a tension toward the plate and said jaw designed for engagement with the clip when the plate is swung thereagainst.

---

1,693,506. TWO-STROKE INTERNAL-COMBUSTION MOTOR WITH SCAVENGING AND EXPULSION THROUGH PORTS IN THE CYLINDER. TORKILD VALDEMAR HEMMINGSEN, Copenhagen, Denmark. Filed Feb. 21, 1927, Serial No. 169,945, and in Denmark May 12, 1926. 6 Claims. (Cl. 123—65.)

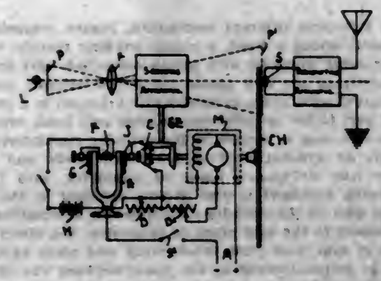


3. A two-cycle internal combustion engine comprising a cylinder having a head, a piston working therein, said cylinder being provided with piston controlled inlet ports, for scavenging air and piston controlled exhaust ports, said exhaust ports being symmetrically arranged in a group in that part of the cylinder remote from said head, extending through only a portion of the cylinder circumference, the axis of symmetry of said exhaust ports and the cylinder axis defining a plane of symmetry, said inlet ports being arranged in two groups disposed in the remaining part of the cylinder circumference, symmetrically with respect to the said plane of symmetry, the directional axes of said inlet ports intersecting said plane of symmetry in points located in the space between the cylinder axis and that part of the cylinder wall opposite said exhaust ports, and the sequence of said intersecting points being in the same order as the sequence of the said inlet ports, said points of intersection with said plane being substantially evenly spaced apart, the head of the piston being provided with deflectors comprising three radially arranged ridges dividing the piston head into three distinct areas, one deflector being situated in said plane of symmetry in the loci of the points of intersection of the center lines of said inlet ports, the other two deflectors being situated symmetrically with reference to said plane of symmetry, and constituting with said first-mentioned deector and with the piston, two symmetrically disposed angular pockets, each one of said pockets extending over one group of inlet ports, said cylinder head being provided with two symmetrically disposed triangular shaped projections matching with the said symmetrically disposed pockets, said projections displacing the volumes of said pockets when the piston is in its upper dead center position, leaving a third pocket, disposed between the two second mentioned deflectors and that part of the cylinder wall on the same side as the exhaust air ports to constitute a combustion chamber, and a fuel valve located in the cylinder head communicating with said third pocket.

---

1,693,507. STOVEPIPE VENTILATOR. WILLIAM J. HULL, Dublin, Ind. Filed May 15, 1928. Serial No. 277,860. 2 Claims. (Cl. 126—312.)

1. A stove pipe ventilator, comprising a pipe joint having a plurality of perforations in its side walls, and an

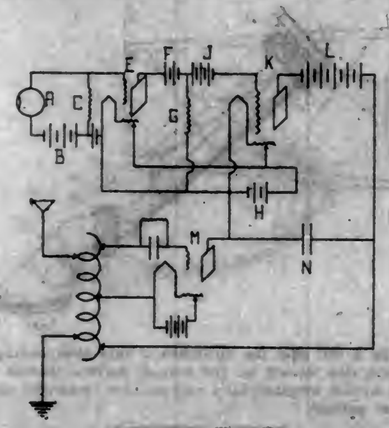


inner frusto-conical pipe section located within said pipe joint and spaced apart therefrom by an annular space of wedge form in longitudinal section, said inner pipe sec-

tion having close wedging engagement with said pipe joint at its rear end and at its opposite end having flexible spring tongues engaging said perforations and reversely bent to prevent rearward movement of said pipe section.

---

1,693,508. PICTURE TRANSMISSION. CHARLES FRANCIS JENKINS, Washinton, D. C. Filed Aug. 19, 1926. Serial No. 130,282. 6 Claims. (Cl. 178—6.)



1. In a system for transmitting visual representations including means for analyzing said visual representations to be viewed at a distance as a composite, means for converting and transmitting them into electrical impulses of frequencies from which a relatively low frequency synchronizing signal bearing a definite relation to the analyzing means may be detected at a distance, means for detecting the low frequency, an independently operating driving device for composing the analyzed equivalents of said representations, means responsive to the detected low frequency for maintaining the driving device for composing the analyzed equivalents in synchronism with said analyzing means, and means for generating a second low frequency synchronizing signal bearing a definite relation to the speed of the driving device for comparison with the first synchronizing signal.

---

1,693,509. RESISTOR CELL CIRCUIT. CHARLES FRANCIS JENKINS, Washington, D. C. Filed Oct. 22, 1924. Serial No. 745,215. 1 Claim. (Cl. 250—17.)

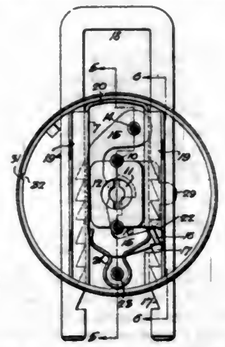
In a radio amplifier and modulator, a light sensitive cell, a three-element tube, a resistance coupling between said cell and tube, an amplifier, a resistance coupling between said tube and amplifier, a source of potential in circuit with the cell and grid of the tube, sources of potential located respectively in the plate circuit of the tube and grid circuit of the amplifier on opposite sides of the second-named resistance coupling, an oscillating tube, a conductor connecting the plate of the amplifier in series with the plate of the oscillating tube, a source of potential in

said conductor, and a by-pass condenser in said conductor, and a by-pass condenser in said conductor between said source of potential therein and the plate of the oscillating tube.

---

1,693,510. GROUND-SPEED INDICATOR. ROBERT KAUCH and CHARLES L. PAULUS, Dayton, Ohio. Filed July 17, 1924. Serial No. 726,550. 17 Claims. (Cl. 88—1.)

15. In a ground speed indicator, means for keeping a constant line of sight to the ground with restricted vision, means to vary the restriction of vision according to altitude, a driven part visible through said sighting means, means to vary the speed of said driven part until the sweep thereof past said sight is approximately the same as the apparent sweep of the ground past said sight and means for indicating different ground speeds for different speeds of said driven part.



---

1,693,511. PADLOCK. ARTHUR C. JACKSON, Philadelphia, Pa., and WALDEMAR KROLL, San Francisco, Calif., assignors to The Yale & Towne Manufacturing Company, Stamford, Conn., a Corporation of Connecticut. Filed Mar. 17, 1926. Serial No. 96,306. 11 Claims. (Cl. 70—108.)

1. The combination of a casing having an integral back section and a deep flange, the flange of said section having a groove in its inner face; works-carrying plates mounted within the casing and the plates having lugs extending into the groove; a guide and spacing member located between the two works-carrying plates, the casing being perforated in alignment with the guides; a U-shaped shackle arranged

to pass through the perforations, one of the arms of said shackle having teeth, a bolt arranged to engage the toothed shackle; and a cover plate having a tongue, and the works-

carrying plates adjacent the cover having a notch to receive the tongue whereby the several parts are brought into alignment.

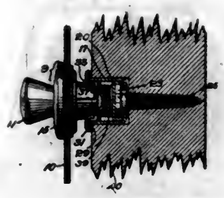
---

1,693,512. DINING CHAIR. SAMUEL JAFFE, Memphis, Tenn. Filed Apr. 15, 1927. Serial No. 184,035. 1 Claim. (Cl. 155—125.)

A dining chair, comprising a seat of a general rectangular shape and having one front side cut away to form a recess for a leg of a diner, two rear legs extending above the seat and having a back secured therebetween, a leg at the front unrecessed side of the seat and extending above the seat, an arm rest between the said leg and one of the rear legs, a leg secured to the under side of the front of the

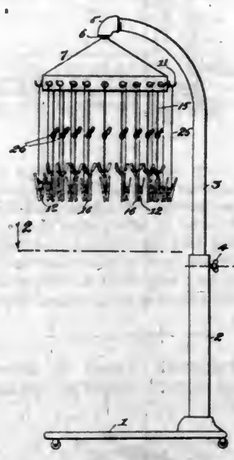
seat at the corner defined by the recess thereof, a leg at the rear of the recess of the seat and extending above the seat a less distance than the rear legs, and a table arm secured to the top of the said leg and to one rear leg between the seat and its upper end, and having its forward end extending over the recess of the seat.

---



1,693,513. BUMPER CLAMP. HERBERT S. JANDUS, Detroit, Mich., assignor to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed July 18, 1927. Serial No. 206,435. 18 Claims. (Cl. 293—55.)

18. A clamp plate having spaced recesses adapted to receive an edge of a bar and to provide extended bearing surfaces thereon, a recessed projection intermediate said spaced recesses adapted to receive an edge of the bar and an aperture in said plate adapted to receive the shank of a bolt.

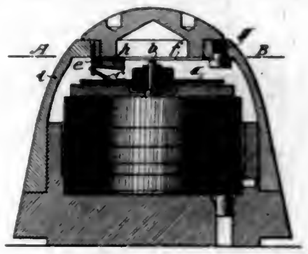


1,693,514. FASTENER. GUSTAV JOHNSON, Dorchester, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed June 14, 1924. Serial No. 719,920. 7 Claims. (Cl. 24—211.)

1. A fastener socket including a tubular casing, a partition between the ends of said casing, means at one side of said partition for receiving a cooperating stud and a recess at the other side of said partition surrounded by a wall crimped over the head of an attaching member located in said recess to prevent relative rotation between the casing and attaching member.

---

1,693,515. PERMANENT-WAVING MACHINE. MARJORIE S. JOYNER, Chicago, Ill., assignor to The Madame C. J. Walker Manufacturing Company, Indianapolis, Ind., a Corporation of Indiana. Filed May 16, 1928. Serial No. 278,174. 6 Claims. (Cl. 132—36.)

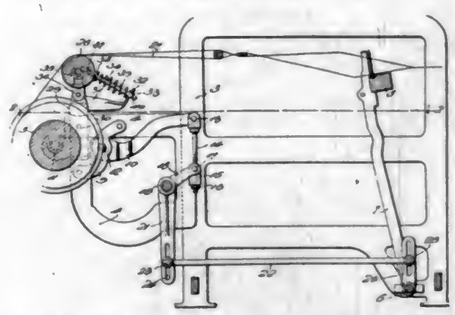


1. In a permanent waving machine, the combination with a standard, of a dome carried by said standard, said dome provided with a spacing plate therein, hooks on said dome, means supported by said hooks and retaining the spacing plate within the dome, lights and curling irons supported upon said spacing plates, and clamping devices supported by said hooks.

---

1,693,516. MECHANICAL TIME FUSE. OSKAR JUNGHANS, deceased, Schramberg, Germany, by Siegfried Junghans, administrator, Villingen, Baden, Germany. Filed Jan. 12, 1928, Serial No. 246,358, and in Germany Jan. 19, 1927. 3 Claims. (Cl. 102—36.)

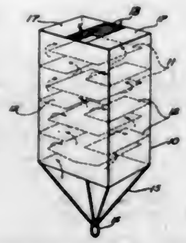
1. A mechanical time fuse of the character set forth, comprising a clockwork, a cap enclosing said clockwork, a



timing or setting disk operatively connected with the main arbor of the said clockwork, a lug projecting from the plane of the said timing disk, a pin in the cap co-operating with

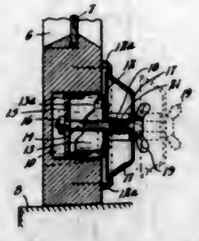
the said lug to lock the timing disk, and a hammer adapted to bring, upon the firing of the shot, the said lug out of locking engagement with the pin.

---



1,693,517. WARP-BEAM-SHIFTING MEANS. AUGUST KATTERMANN, Paterson, N. J. Filed Dec. 15, 1927. Serial No. 240,287. 2 Claims. (Cl. 139—100.)

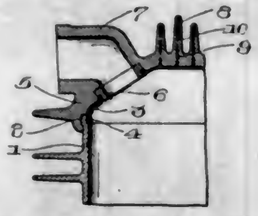
1. In a loom, warp beam bearings, levers by one end of which said bearings are carried, links pivoted to the other end of said levers, means fulcruming said levers between their ends, crank arms to which said links are pivoted, a rock shaft carrying said crank arms, and operating means connecting said crank arms with a positively moved part of the loom for rocking said shaft to alternately effect raising and lowering of the warp beam supporting bearings and the warp beam.



---

1,693,518. PARACHUTE. JOHN H. KESSLER, Nyack, N. Y. Filed May 18, 1927. Serial No. 192,338. 7 Claims. (Cl. 244—21.)

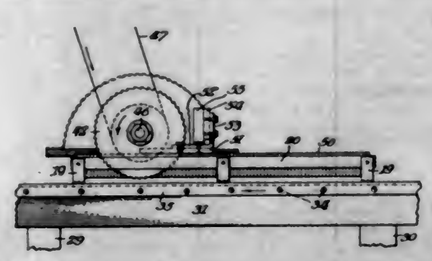
2. A parachute, an elongated rectangular box-like body open for the passage of air vertically therethrough, transversely disposed baffles in the body throughout its length, means at the bottom to suspend a person descending with the parachute, and top sections on the body presenting an air outlet therebetween.



1,693,519. VENTILATOR FOR WINDOW SASHES. SAMUEL A. KINKEL, Minneapolis, Minn. Filed Mar. 3, 1928. Serial No. 258,827. 8 Claims. (Cl. 98—97.)

1. A window ventilator, comprising a plate adapted to fit over an opening in a window sash, resilient means urging said plate away from the sash, a key projecting through said plate and having a head abutting the outer side thereof, and a cam against which portions of said key must travel as it is turned, to force said plate against said sash as the key is turned in one direction and to permit said resilient means to force said plate away from the sash as the key is turned in an opposite direction.

---

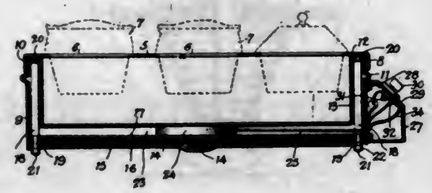


1,693,520. CYLINDER OF AN INTERNAL-COMBUSTION ENGINE. RENNOSUKE KONDO, Tokyo, Japan. Filed Apr. 3, 1928, Serial No. 266,989, and in Japan Jan. 30, 1928. 3 Claims. (Cl. 257—261.)

1. Cylinder of an internal combustion engine comprising a cylinder body, an inner wall of the cylinder head made of sheet metal and fixed to an end of the said cylinder by a connecting means such as welding or soldering, and an outer wall of the cylinder head which is made of aluminum or its alloy and cast on the said inner wall so as to cover its whole outer surface and to be connected with the end of the cylinder body.

---

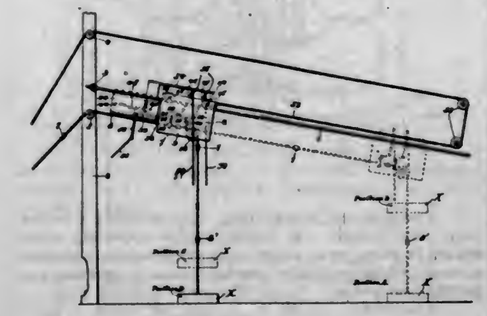
1,693,521. EQUIPMENT FOR MANUFACTURING BOX PARTS. HOMER E. LEASH, Niles, Calif., assignor to International Wood Products Co., Niles, Calif., a Corporation of Delaware. Filed Jan. 26, 1925. Serial No. 1,705. 4 Claims. (Cl. 143—52.)



2. A tray for use substantially as described in connection with a sawing machine and comprising a plurality of lon-

gitudinally extending supporting members spaced apart at least a distance sufficient to permit the passage of a saw blade therebetween, upwardly extending stops at opposite ends of each of said supporting members, means on one of the end stops of each of said supporting members for urging material packed therebetween towards the opposite stops, a plurality of binding members arranged transversely of said longitudinal supporting members and secured thereto so as to maintain the latter in said spaced relation, means supported by said binding members for aligning the ends of said strips of material, and a removably mounted longitudinally extending member for optionally adapting said tray for use with different lengths of material.

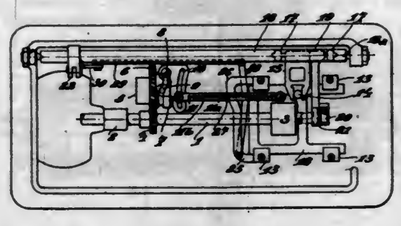
---



1,693,522. ELECTRIC STEAM TABLE. ROBERT EARNEST MEDEARIS, Nashville, Tenn. Filed Nov. 3, 1927. Serial No. 230,840. 2 Claims. (Cl. 219—43.)

1. An electric steam table, consisting of a top having openings to receive food containers, an outer casing, a tank supported in spaced relation to said top and casing, a bottom composed of a series of plates, adjustable means for connecting the tank, casing and bottom, a heating unit between the bottom and tank, a switch box secured to the casing, a switch mounted therein, a series of contacts for said switch, and current feeding wires leading to said heating unit.

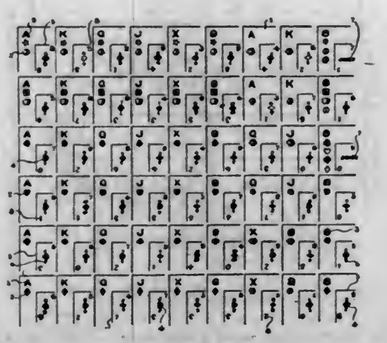
---



1,693,523. OVERHEAD HAULAGE CARRIER. ELMORE MILOTTE, Eureka, Calif., assignor of one-half to J. B. Morganti, Eureka, Calif. Filed Sept. 14, 1927. Serial No. 219,528. 3 Claims. (Cl. 212—98.)

1. An overhead haulage carrier comprising a carriage, a track therefor, a combined haulage and load supporting cable extending into and depending from said carriage, spaced stops secured to said cable, a pair of spaced latching means within said carriage, means to provide for one of said stops to coact with said latching means to maintain the load in a suspended position and for the propelling of the carriage in one direction from said cable, means to provide for the other of said stops to coact with said latching means to maintain the load engaging end of the cable, when free of the load, in an elevated position when the carriage is travelling in an opposite direction, and means for shifting said carriage in said opposite direction.

---

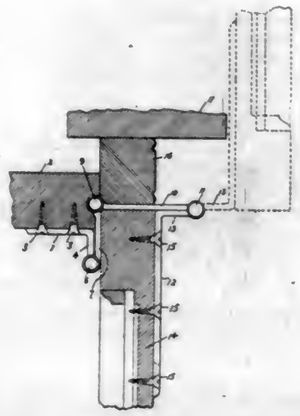


1,693,524. FEEDING MECHANISM FOR SEWING MACHINES. RUDOLF MUNDLOS, Magdeburg, Germany. Filed Jan. 26, 1927, Serial No. 163,756, and in Germany Apr. 29, 1925. 5 Claims. (Cl. 112—205.)

1. In a sewing machine for moving a material-feeder in longitudinal direction comprising a main shaft, a material-feeder, a bearing on the main shaft, an oscillatable lever, a frame-shaped slide associated with the main bearing and with the material-feeder, a connecting rod between said lever and material slide, a stud projecting from the slide, an oscillatable bolt on which the material-feeder is pivotally mounted, and a fork on said bolt for engagement with said slide.

---

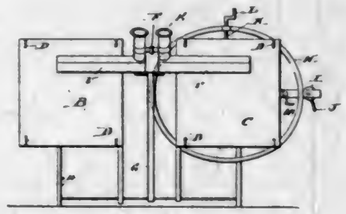
1,693,525. PACK OF PLAYING CARDS. JOSEPH D. NIEDERLITZ, Rochester, N. Y. Filed Aug. 23, 1928. Serial No. 301,551. 6 Claims. (Cl. 273—152.)



1. A pack of playing cards comprising fifty-four cards which have characters thereon dividing the cards into eight suits and also value characters on the different cards of each suit, the value characters of the different suits being the same type.

---

1,693,526. HINGE. CHARLES S. OWENS, Madisonville, Ohio. Filed June 15, 1927. Serial No. 199,103. 2 Claims. (Cl. 16—163.)

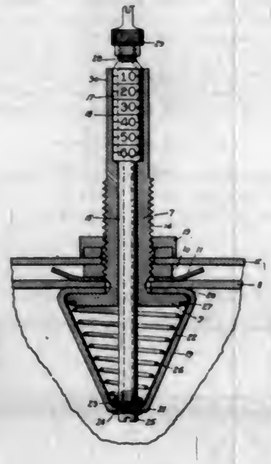


1. A hinge, comprising in combination with an inside leaf adapted to be secured to a fixed frame and an outside leaf adapted to be secured to the face of a movable frame,

an extension on said outside leaf extending at right angles thereto away from said frame, and a plurality of intermediate leaves pivotally secured together, one of said intermediate leaves being pivotally secured to said inside leaf and another being pivotally secured to the outer end of the extension on said outer leaf.

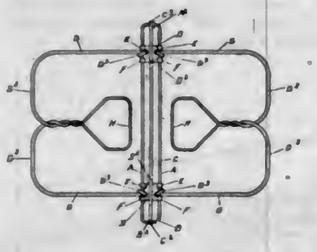
---

1,693,527. AERIAL PHOTOGRAPH INTERPRETER. DACHE M. REEVES, Belleville, Ill. Filed Mar. 21, 1923. Serial No. 626,551. 10 Claims. (Cl. 88—29.)



2. In combination with a supporting frame, a pair of photograph-supporting platforms, an optical unit, and means for varying the magnification of a photograph placed upon one of said platforms, and means for moving one of said platforms in either or both of two directions transversely of each other.

---

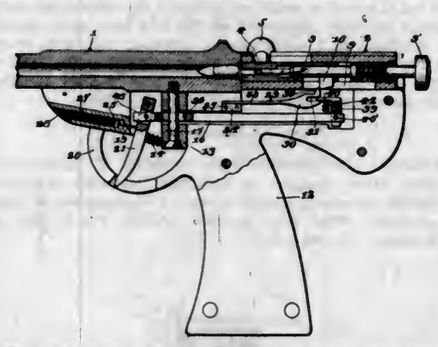


1,693,528. TIRE VALVE STEM AND PRESSURE GAUGE. NELSON T. SHORTS, Fern, Pa. Filed Mar. 16, 1927. Serial No. 175,830. 8 Claims. (Cl. 152—11.5.)

8. The combination with the inner tube of a tire, of a tire pressure gauge comprising a barrel having a flange at one end disposed within said tube, a member slidable through said barrel, a conical bulb having its smaller end attached to said member and having an inturned flange at its larger diametered portion disposed between said barrel flange and tube, a conical spring within said bulb confined between said member and barrel flange with its larger diametered portion bearing against said barrel flange, and means on said barrel to clamp said tube and bulb flange between it and said barrel flange.

---

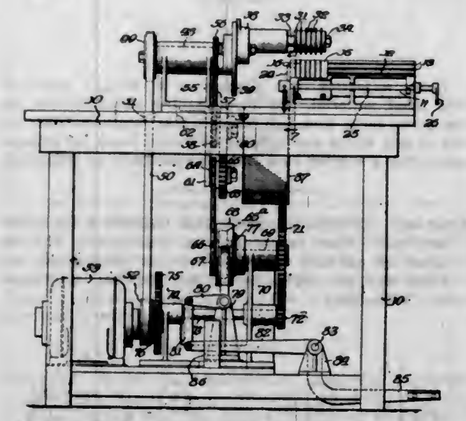
1,693,529. MAGAZINE AND BOOK HOLDER. CLARENCE R. SNOW and DANIEL J. FLOOD, Quincy, Mass. Filed Jan. 31, 1928. Serial No. 250,816. 6 Claims. (Cl. 129—38.)



5. A book holder formed from wire including a center frame with parallel side members, page-supporting wings hinged thereon; said wings having respectively intermediate their edges a handle adapted for use in grasping and holding the device.

---

1,693,530. PISTOL. WALTER S. SPENCER, St. Louis, Mo. Filed Sept. 28, 1927. Serial No. 222,661. 8 Claims. (Cl. 42—16.)



3. In a firearm, in combination, a sear including a shank fixed at one end and having its other end provided with a head formed with a lengthwise slot and further provided with an upstanding lug for extension in the path of a bolt action to releasably hold said action in set position, an angle shaped, pivoted, spring controlled combined holding and releasing member for said sear and having one of its arms permanently extending into the slot of said head, and a trigger operated releasing bar pivotally connected to said member and providing means for rocking the same on its pivot to shift said lug of the sear out of the path of the bolt action to release the same.

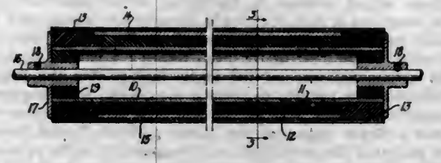
8. In a firearm, a trigger, and a spring controlled plunger positioned in advance of and in the path of and engageable with the trigger for cushioning the return movement of the latter.

---

1,693,531. CUTTING DEVICE. HORACE D. STEVENS, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 22, 1924. Serial No. 708,211. 10 Claims. (Cl. 164—61.)

2. A cutting device comprising means for holding a sheet of flexible material in cylindrical, trough-shaped condition and a cutter movable transversely of said sheet across the trough.

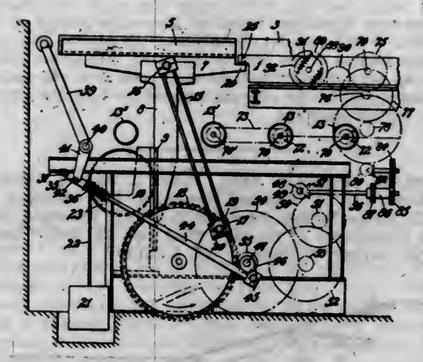
---



1,693,532. SAFETY RAZOR. BENJAMIN FLETCHER STEWART, Birmingham, Ala., assignor of one-half to Albert Vanburen Vines, Bessemer, Ala. Filed Dec. 10, 1927. Serial No. 239,166. 1 Claim. (Cl. 30—12.)

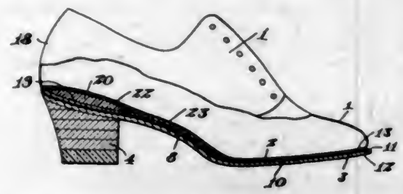
In a safety razor, a head having sockets, a removable blade holding section having a threaded shank extending through the head, a securing plate having openings disposed adjacent to the sockets and having an opening to receive the threaded shank, a nut on the shank to engage the plate to hold the plate into close engagement with the head, a handle embodying sections movable longitudinally with respect to each other, a ball on one end of each handle section, said balls being fitted in the sockets and held against movement by frictional engagement with the plate.

---



1,693,533. TYPEWRITING MACHINE. BURNHAM C. STICKNEY, Portsmouth, N. H., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 21, 1926. Serial No. 136,755. 8 Claims. (Cl. 197—147.)

6. A cylindrical platen for a typewriting machine, including a reinforced lead core and a thin stiff covering for said core, the latter serving as a means for protecting the lead core against type-blow indentations, said stiff covering being backed by an intervening thin layer of flexible material.



---

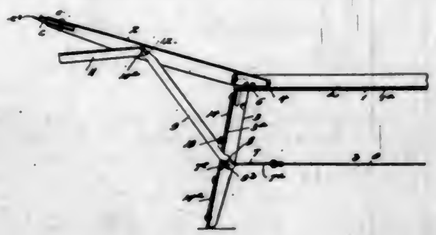
1,693,534. APPARATUS FOR CONVEYING THE WORK-HOLDING TABLES OF A CONTINUOUSLY-MOVING SERIES OF TABLES. FREDERIC BARNES WALDRON, Prescot, England, assignor to Pilkington Brothers Limited, Liverpool, England, a Limited Liability Company of Great Britain. Filed Aug. 11, 1924, Serial No. 731,385, and in Great Britain Aug. 23, 1923. 7 Claims. (Cl. 198—85.)

7. In apparatus for conveying the work-holding tables of a continuously moving series of tables from the finishing end to the starting end of their operative course, the combination with said continuously moving series of tables and main driving means operative to propel said series, of auxiliary driving means adapted to push forward the table last added to the series, the auxiliary and main driving means being in operative connection with each other, and a spring driving device in the auxiliary driving means adapted to push the said added table resiliently against the next preceding table of the series, whereby the table so added may be pushed at any moment, into engagement with the said auxiliary driving means and driven thereby into operative engagement with the main driving means.

1,693,535. PROCESS OF MAKING BOOTS AND SHOES. PAUL C. WOLFER, Everett, Mass. Filed July 11, 1927. Serial No. 204,727. 7 Claims. (Cl. 12—142.)

1. The improved method of manufacturing boots and shoes, which consists in assembling upper materials and an insole on a last, forming a longitudinal instep arch in said upper materials extending from the ball of the toe portion to the rear of the heel, forming a pair of pockets on a diagonal line on the insole and raising the insole between said pockets to form a metatarsal arch support, applying an arch stiffener to said shoe with a portion of said stiffener engaging the raised portion of said insole to maintain the metatarsal arch support, applying suitable filler to the shoe bottom cavities, applying an outsole and completing the shoe.

---

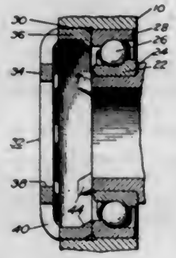


1,693,536. UMBRELLA. WILLIAM T. WOODLEY, Raleigh, N. C. Filed Nov. 12, 1927. Serial No. 232,825. 2 Claims. (Cl. 135—34.)

1. In an umbrella, a frame comprising ribs, a removable cover to be arranged upon the ribs, socket plates secured to the outer portions of the removable cover and having extensions extending throughout the major portion of the length of the ribs for distributing the strains over the major portion of the area of the cover, said socket plates having key-hole openings near their outer ends and headed studs carried by the ribs and adapted for insertion within the keyhole openings.

---

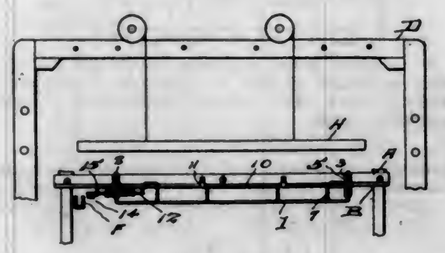
1,693,537. FOLDING BED. FRANK A. ADKINS, Chicago, and NOAH S. HARTER, Waukegan, Ill., assignors to Champion Folding Furniture Company, Waukegan, Ill., a Corporation of Illinois. Filed July 15, 1927. Serial No. 206,097. 7 Claims. (Cl. 5—114.)



1. A folding bed comprising side rails and legs composed of channel bars, each rail comprising a relatively long central bar, the legs pivoted to the ends of the central bars and adapted to fold around the backs and sides thereof, and a leg tie connecting the legs attached to each central bar, each tie comprising realtively short end sections pivoted within the legs and adapted to fold upwardly therein, and a relatively long central section adapted to lie against the back of the central section of the side rail when the bed is folded.

7. A folding bed comprising side rails and legs, each side rail comprising a central bar and pivotally connected end bars adapted to project beyond the central bar when the bed is set up, a fabric connected to the ends of the bars, latches pivotally supported on the end bars and adapted to interlock with parts on the adjacent legs, and levers on the end bars adapted to apply tension to the latches after they have been locked to the legs to draw the end bars downwardly and thereby stretch the fabric.

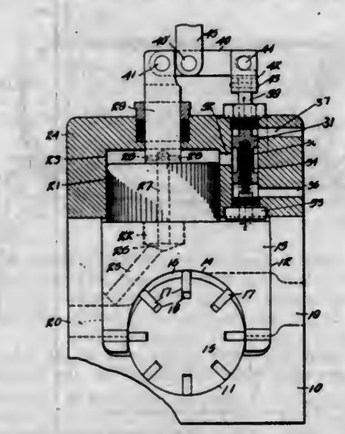
---



1,693,538. ADJUSTING NUT. CARLOS H. ALLEN, Detroit, Mich., assignor to The New Departure Manufacturing Company, Bristol, Conn., a Corporation of Connecticut. Filed July 2, 1925. Serial No. 41,232. 4 Claims. (Cl. 85—32.)

1. An adjusting nut comprising a flanged plate of thin sheet material, the flange having screw threads on one of its faces, and fingers pressed at intervals from the end of said flange and forming abutment faces for engagement with a bearing race ring; substantially as described.

---



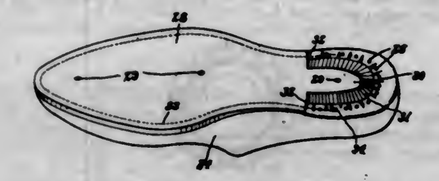
1,693,539. COMBINED SHUTTLE GUARD AND STOP MOTION. LEO ABRAM BADGER, Burlington, Vt., assignor of one-half to Alfred Perrotta, Burlington, Vt. Filed May 16, 1927. Serial No. 191,724. 4 Claims. (Cl. 139—341.)

1. In a loom the combination of the reed-cap and a side filling-fork, a normally retracted brush-bolt carried by the reed-cap for co-action with the tail of the side filling fork, retaining means for the brush-bolt and means for releasing said retaining means, and means for projecting the released brush-bolt.

1,693,540. PUMP-CONTROL DEVICE. HAROLD E. BALSIGER, Waynesboro, Pa., assignor to Landis Tool Company, Waynesboro, Pa., a Corporation. Filed Nov. 8, 1927. Serial No. 231,877. 11 Claims. (Cl. 103—120)

1. A pump regulating device comprising means movable to vary the volumetric capacity of the pump, fluid pressure means for operating said capacity varying means, and manually operated means for controlling the admission of fluid to said last named means, substantially as set forth.

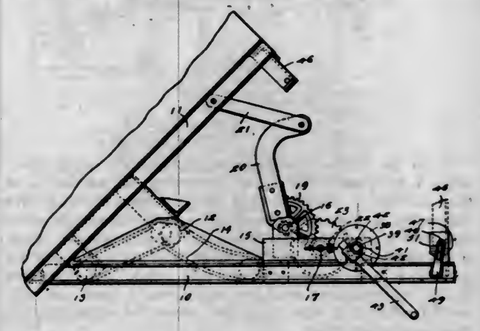
---



1,693,541. BUTTON. FRANK BATOVEC, Sr., New York, N. Y., assignor to Frank Batovec, Jr., New York, N. Y. Filed May 9, 1927. Serial No. 190,054. 1 Claim. (Cl. 24—90.)

A button comprising a center piece having a recess in one face thereof, a shell member formed from a single piece of material having a bottom disc, said center piece and bottom disc having aligned holes therein, the holes in said center piece opening into said recess, and a peripheral flange vertical to said disc, the top of said flange being above said recessed face.

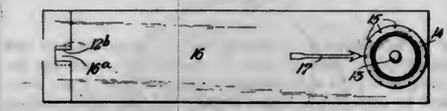
---



1,693,542. BOOT AND SHOE AND METHOD OF MAKING THE SAME. SIDNEY R. BLAKELY, Jamaica Plain, Mass. Filed Nov. 21, 1927. Serial No. 234,728. 6 Claims. (Cl. 36—19.)

1. A McKay shoe comprising an insole, a shank and heel piece under said insole, upper materials, an outsole and heel, said outsole being secured by through and through stitching to said upper materials, shank and heel piece and insole rearwardly to a point forward of the heel breast, and rearwardly from said point to the heel breast to the upper materials and heel and shank piece only, said insole being free of said stitching from said point rearwardly, said stitching, from the heel breast rearwardly for a predetermined distance, uniting the upper materials and shank and heel piece only, and a reduced beveled portion of said outsole acting as a filler for the seat of said heel.

---



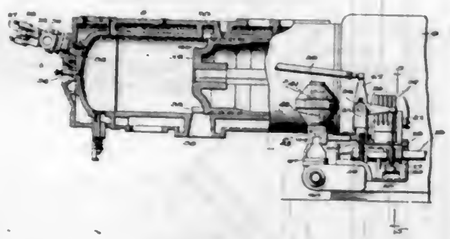
1,693,543. DUMPING BODY. FRED BISZANTZ, Galion, Ohio, assignor, by mesne assignments, to The Central Ohio Steel Products Company, Galion, Ohio, a Corporation of Ohio. Filed Dec. 28, 1927. Serial No. 243,085. 10 Claims. (Cl. 298—19.)

1. In a dumping body assembly for vehicles, a frame, a body mounted for oscillation thereon, a shaft, connections between the shaft and body whereby the body is oscillated as the shaft is rotated, means locking said shaft against rotation in both directions in all positions of the body and a manually operable element rotatable in both directions, said element when rotated in either direction initially releasing the means locking the shaft against rotation in such direction and then operatively engaging the shaft to rotate the same in such direction.

---

1,693,544. CLOSURE LOCK. MILON H. BORZIN and ARSENIE MITAU, Chicago, Ill. Filed Nov. 11, 1926. Serial No. 147,830. 3 Claims. (Cl. 206—1.5)

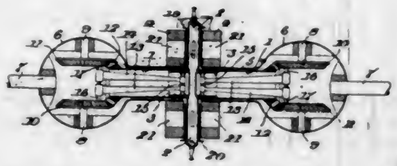
1. The combination in a box or the like having side walls and end walls, a closure thereon and having substantially interlocked engagement with one of said end walls, a pivot extending from the other one of said end walls, said closure having a slot through which said pivot extends, a stud extending up from said closure, and a rotary member on said pivot and having an annular recess and a radially disposed recess communicating with one another and adapted to receive said stud alternately, for the purpose specified.



---

1,693,545. TEAT DILATOR. CHARLES BROERSMA, Tony, Wis. Filed Mar. 23, 1927. Serial No. 177,582. 5 Claims. (Cl. 128—341.)

1. A device for opening an udder comprising an elongated piece of absorbent animal tissue, said member being sterilized and adapted to have its end inserted in the opening in an udder so as to absorb moisture therefrom and expand therein.

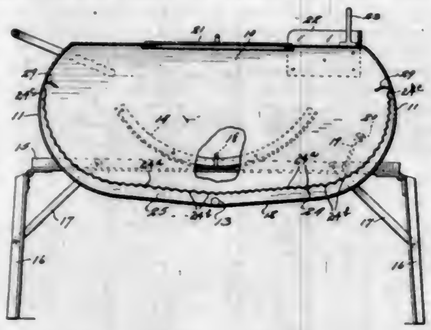


1,693,546. FUEL-INJECTION MECHANISM. CHARLES PAUL CLARK, Olean, and CARL A. BJORNNSON, Wellsville, N. Y., assignors to Clark Brothers Company, Olean, N. Y., a Corporation of New York. Filed Apr. 25, 1927. Serial No. 186,329. 5 Claims. (Cl. 123—69.)

5. In an internal combustion engine, the combination with a cylinder, a valve for regulating the admission of fuel thereto, a source of fuel supply communicating with the valve, a governor controlled valve interposed between the source of fuel supply and the first-mentioned valve, a lay shaft operated by the engine, and geared to and for actuating said governor controlled valve, cam actuated levers controlled by said lay shaft, and a push rod connected with said cam actuated levers for actuating the first-mentioned valve.

---

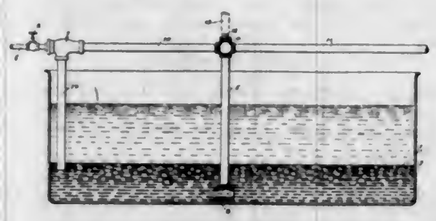
1,693,547. INTERNAL-COMBUSTION ENGINE. EDWARD E. CLEMENT, Ocean City, N. J. Filed Oct. 7, 1921. Serial No. 506,146. 24 Claims. (Cl. 60—11.)



2. In an engine the combination of a rotor element and a reciprocating element co-axial therewith, means for imparting power to both elements, a transverse shaft journalled on said rotor, means connecting said reciprocating element with said transverse shaft to turn the same, a bevel gear in fixed connection with said reciprocating element, gearing meshing with said bevel and driven by said shaft against the same whereby said rotor may drive the reciprocating element or the reciprocating element may drive the rotor, and means for taking power from both in reciprocally varying proportions.

---

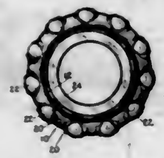
1,693,548. WASHING MACHINE. DAVID A. CORRIE, Vincennes, Ind., assignor of one-half to Joseph J. Risch, Vincennes, Ind. Filed May 7, 1927. Serial No. 189,674. 1 Claim. (Cl. 68—21.)



A washing machine of the character described including a supporting frame, a receptacle mounted for rocking movement upon the frame, the receptacle having upwardly extending rounded ends and having longitudinally extending rails disposed in the bottom of said receptacle at each side thereof and formed with upwardly extending studs, and a perforated screen disposed within the receptacle and resting upon said rails and being thus supported in spaced relation to the bottom and ends of the receptacle, the screen having upwardly rounded end portions, the screen being transversely corrugated and being formed with apertures at its margins through which said studs engage whereby the screen may be detachably held upon the framing members, and baffles extending inward from the wall of the receptacle at each end of the screen and

by which water discharged at the ends of the screen is directed downward upon the clothes as the receptacle is rocked.

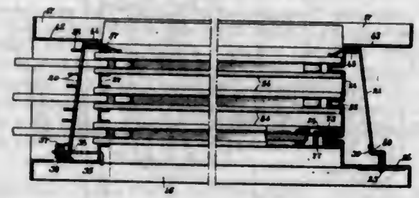
---



1,693,549. APPARATUS FOR DEHYDRATING TAR. ROGER CRILLY, Elizabeth, N. J. Filed May 20, 1927. Serial No. 192,937. 2 Claims. (Cl. 196—3.)

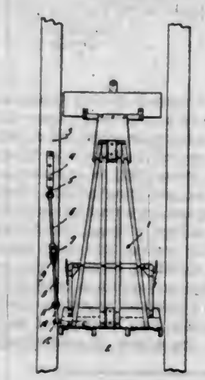
1. An apparatus of the character described, including a tank adapted to receive a tar emulsion, a pipe coupling having four nipples and located above the tank, a plug normally closing the upper of said nipples, a vertical pipe communicating with the lower of said nipples and having its lower end adjacent the bottom of the tank, alined horizontal pipes connected to the other of said nipples, a steam jet connected to one of said last mentioned pipes, and a vertical pipe connected to the bottom of the steam jet and projecting into the tank.

---



1,693,550. METHOD OF MAKING BEARING SEPARATORS. THOMAS C. DELAVAL-CROW, Bristol, Conn., assignor to The New Departure Manufacturing Company, Bristol, Conn., a Corporation of Connecticut. Filed Mar. 13, 1923. Serial No. 624,705. 3 Claims. (Cl. 29—148.4.)

1. That improvement in the method of making separators for balls of a ball bearing which consists in pressing a ring out of sheet metal, and utilizing balls slightly larger than those of the bearing for pressing spherical bearing surfaces into the ring to engage the bearing balls in use.

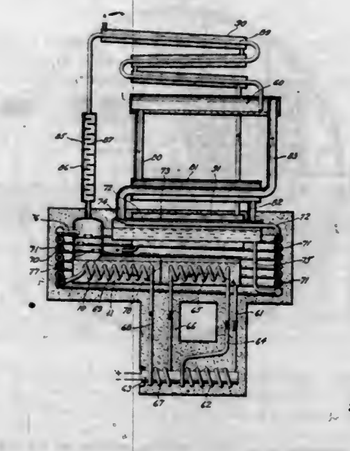


1,693,551. WINDOW CONSTRUCTION. FRANK X. GRASER, Lindenhurst, N. Y. Filed Feb. 7, 1928. Serial No. 252,557. 12 Claims. (Cl. 20—51.)

1. A window including a stationary frame, a frame hingedly mounted therein and a plurality of sashes carried by the swinging frame capable of removal by a lateral sliding movement through the free side of the hinged frame when the latter is ajar for cleaning or repairs.

---

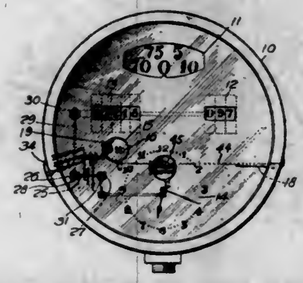
1,693,552. ELEVATOR SUPPORT. FRED HENDERSON, Bisbee, Ariz. Filed Oct. 15, 1927. Serial No. 226,417. 1 Claim. (Cl. 187—73.)



In combination with a cage and its shaft, a metallic strap secured on one of the timbers of the shaft, the lower end of the strap being formed with an eye, an elongated rod having an eye formed at its upper end for interfitting engagement with the aforementioned eye, a turnbuckle secured at its upper end on the lower end of said rod, an eye bolt having its upper end threaded into the lower end of the turnbuckle, a link attached to the eye portion of the eye bolt and a hook secured on the bottom of the cage at one side thereof and extending outwardly therefrom for detachable engagement with said link.

---

1,693,553. REFRIGERATION. CARL GEORG MUNTERS, Stockholm, Sweden, assignor to Electrolux Servel Corporation, New York, N. Y., a Corporation of Delaware. Filed Sept. 14, 1928, Serial No. 306,007, and in Sweden Apr. 6, 1926. 13 Claims. (Cl. 62—178.)

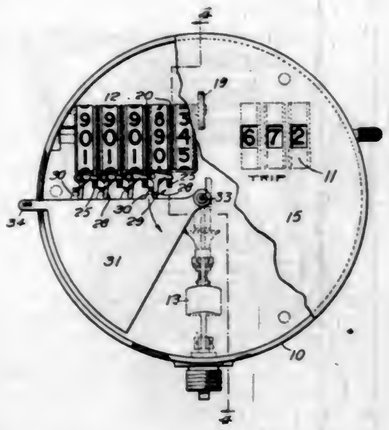


3. That improvement in the art of refrigerating through the agency of an absorption system which consists in simultaneously and continuously withdrawing weak absorption liquid from a main body thereof heating the withdrawn liquid to produce a flow motivating force moving the withdrawn liquid into absorptive contact with a vaporised cooling agent under influence of the flow motivating force, transferring heat from the heater withdrawn portion to said main body on its way to the said absorptive contact, conducting enriched absorption liquid back to the same said main body and transferring heat

into the returning rich absorption liquid from the weak heated withdrawn liquid before the withdrawn liquid becomes enriched by said absorptive contact.

---

1,693,554. SIGNAL FOR MOTOR VEHICLES. MARVIN SMITHEY, Lawrenceville, Va., assignor to L. P. Smithey and Nellie C. Smithey, Roanoke, Va. Filed Aug. 13, 1920, Serial No. 403,252. Renewed Feb. 24, 1925. 10 Claims. (Cl. 116—115.)

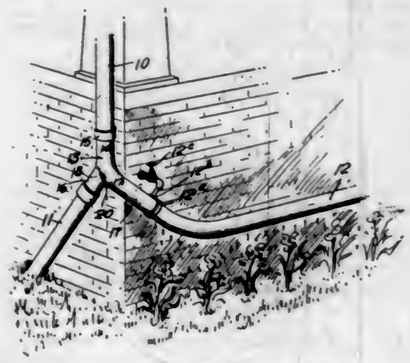


4. An indicator for motor vehicles comprising a device for calling attention to some matter in relation to the vehicle and a plurality of dissimilar control mechanisms for said device, each of which acts independently of another whereby if one does not render said device active, another will.

---

1,693,555. SIGNAL OR INDICATOR FOR MOTOR VEHICLES. MARVIN SMITHEY, Lawrenceville, Va., assignor to L. P. Smithey and Nellie C. Smithey, Roanoke, Va. Filed Oct. 10 1921, Serial No. 506,594. Renewed Jan. 3, 1925. 6 Claims. (Cl. 116—114.)

4. A warning or signal device for motor vehicles including a movable signal member, and means for the display

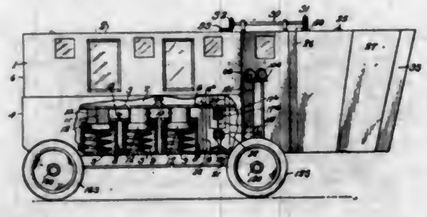


of the signal operating on a mileage basis comprising an odometer and a control element at the side of one of the odometer wheels and shiftable rotatably to various posi-

tions, comprising a disk with a notch in its periphery, whereby the mileage period may be varied and member resetting means.

---

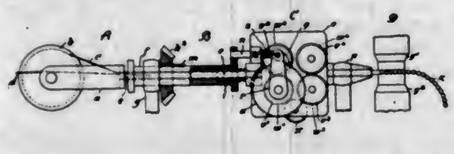
1,693,556. SPRINKLING SYSTEM. LENORA SPENCER, Hot Springs National Park, Ark. Filed May 14, 1927. Serial No. 191,348. 1 Claim. (Cl. 299—58.)



In a sprinkler system, the combination with a rainwater receiving down spout, a soil pipe connected thereto, a sprinkler connected to the spout adjacent its connection with the soil pipe, a manually controlled valve within the connection between the down spout, soil pipe and sprinkler for directing the rain water from the spout into either the soil pipe or sprinkler, and a separate water supply connected to the sprinkler, and a valve for controlling said water supply connection.

---

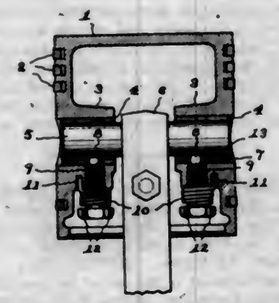
1,693 557. AIRCRAFT. ROBERT LEE WRIGHT, Los Angeles, Calif; Willie Crockett Wright administrator of said Robert Lee Wright, deceased. Filed July 23, 1923. Serial No. 653,263. 7 Claims. (Cl. 244—25.)



7. An aircraft comprising a body, ground wheels mounted upon each side thereof, a substantially conical and spirally formed propeller centrally mounted and outwardly extending with respect to each of said wheels, a pair of motors a drive shaft, a plurality of driven shafts connected to said wheels and adapted to be geared to the

drive shaft, and a plurality of clutches operatively arranged whereby power may be taken through either one motor or the other.

---

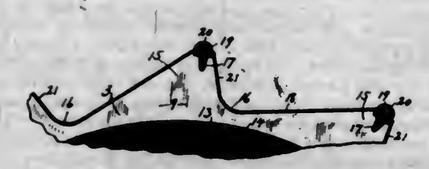


1,693,558. AUTOMATIC MANUFACTURING OF BEAD CHAINS. KARL DÜRR, Pforzheim, Germany. Filed Oct. 18, 1926, Serial No. 142,443, and in Germany Oct. 10, 1925. 1 Claim. (Cl. 59—2.)

In a machine for manufacturing bead-chains to which are fed simultaneously a metal-band from which the beads are to be formed and a wire which on a parallel working machine has been shaped to form the intermediate links between the beads, comprising in combination with swaging dies two pairs of moulding rollers arranged one pair behind the other, means for simultaneously feeding to said pairs of moulding rollers a metal band and a fashioned wire the latter being rolled into said metal band when the same is being rolled to form a tube, and means for rotating said rollers at uniform circumferential speed to give to said metal tube and wire the rotating movement which is necessary for the forming of beads presenting successive faces to the action of said swaging dies.

---

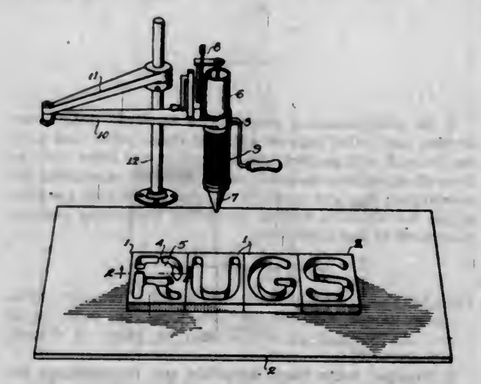
1,693,559. DEVICE FOR TAKING UP LOOSENESS IN BEARINGS. LEO W. HALL, Perkins Township, Erie County, Ohio. Filed Aug. 22, 1925. Serial No. 51,745. 1 Claim. (Cl. 308—67.)



A device of the character described, including a supporting boss, a tubular bearing arranged within the same and formed with a lateral opening, a main pin received within the tubular bearing, a bearing pin supplemental to the tubular bearing arranged loosely within the lateral

opening of the tubular bearing and engaging the main pin, an adjusting screw threaded in the boss and engaging the bearing pin, said adjusting screw being formed with a head having a series of wire engaging notches therein, and a helical spring surrounding the adjusting screw and having one end thereof in engagement with the supporting boss while the other end thereof is in engagement with a selected notch in the head of the screw whereby the spring can be placed under proper tension to automatically rotate the screw and progressively move the bearing pin inwardly and maintain it in engagement with the main pin to prevent looseness when the main bearing wears.

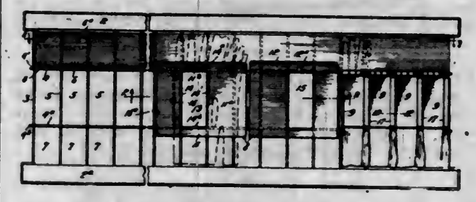
---



1,693,560. PAPER-STOCK STRAINER. JOHN D. HASKELL and MORTIMER R. RUST, Fulton, N. Y., assignors to Dilts Machine Works Incorporated, Fulton, N. Y., a Corporation of New York. Filed Dec. 8, 1924. Serial No. 754,626. 1 Claim. (Cl. 141—12.)

In a paper stock strainer, a vat having a channel through which the stock is caused to move in one direction, a frame hingedly mounted on the vat to swing vertically about a horizontal axis, a screen drum journaled on the frame to rotate about an axis parallel with and some distance from the axis of movement of said frame, said drum having its lower side immersed in and actuated by the flowing stock, a siphon pipe extending from the exterior into the interior of the screen drum coaxial with the axis of rotation of said drum and having its outer end provided with a branch pipe extending across the axis of movement of said frame, a siphon discharge pipe, said branch pipe having turning connection with the discharge pipe coaxial with the axis of movement of said frame, an air exhauster connected to one of the siphon pipes, and means for passing water through the exhauster and into the vat for exhausting air from the siphon pipes sufficient to start the siphoning of dirty water from the interior of the drum and for supplying fresh water to the interior of the vat.

---



1,693,561. METHOD OF MAKING EMBOSSED DESIGNS. BERNARD G. KLEIN, Chicago, Ill. Filed Aug. 2, 1928. Serial No. 296,969. 2 Claims. (Cl. 41—24.)

1. The method of making embossed designs which consists in providing a fusible medium and a base to which said medium will adhere, placing upon the base a matrix having an unrestricted open back and defined by walls to which said medium will not adhere, introducing the fused medium through the back of said matrix, allowing said medium to congeal with convex meniscus, and then separating said matrix and base.

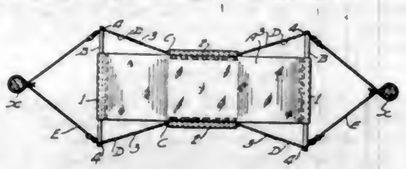
---

1,693,562. FABRIC FRAME AND FABRIC-MOUNTING APPARATUS FOR EMBROIDERY MACHINES. PAUL OTTO MOTHES, North Bergen, N. J., assignor of one-half to Stein-Tobler Company, Inc., a Corporation of New York. Filed Nov. 13, 1926. Serial No. 148,187. 4 Claims. (Cl. 112—90.)

1. A fabric-frame for embroidery machines comprising supporting members extending longitudinally of the embroidery machine, a series of outer tambour-frame elements irremovably and permanently connected to said supporting members, and movable inner tambour-frame elements adapted to frictionally engage pieces of material between themselves and said outer elements and means for initially stretching individual pieces of fabric over said outer frame elements and guiding the insertion of said inner element within the outer element.

---

1,693,563. HOLLOW TOY FIGURE. HEINRICH MÜLLER, Nuremberg, Germany. Filed July 7, 1927, Serial No. 203,933, and in Germany Apr. 30, 1926. 2 Claims. (Cl. 132—83.)

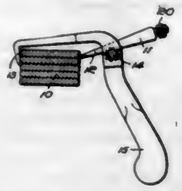


1. A vanity case in the form of a toy-figure comprising two body sections hinged so as to be opened and closed, a semi-cylindrical extension on the upper end of one section of the body, a projection on the upper end of the other section of the body having a lower semi-cylindrical portion matching said semi-cylindrical extensions and an upper cylindrical portion, and a removable head adapted to be fitted over the said neck extensions of the body sections so as to hold the same in closed position.

---

1,693,564. HAMMOCK. PAUL J. MURPHY and GREGORY B. SONTAG, St. Louis, Mo., assignors to St. Stanislaus Seminary, Florissant, Mo., a Corporation of Missouri. Filed Nov. 5, 1926. Serial No. 146,364. 2 Claims. (Cl. 5—122.)

1. A hammock, comprising a flexible supporting member, transversely-disposed rigid end members of considerably



greater length than the width of said supporting member joined to the ends of same, rigid side members located adjacent the center of said supporting member and combined

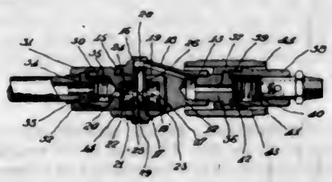
with the side edges of same, flexible inclined stays attached to said side members and to said end members, and flexible sustaining devices attached to said end members.

---

1,693,565. LUBRICATING APPARATUS. WALTER H. PIERCE, Watertown, Mass., assignor, by mesne assignments, to Alemite Manufacturing Corporation, Chicago, Ill., a Corporation of Delaware. Filed Mar. 14, 1922. Serial No. 543,549. 4 Claims. (Cl. 81—3.7.)

3. Lubricating means for leaf-springs comprising wedge means having a toggle action for wedging one leaf away from the rest of the spring, and means for injecting lubricant between the separated leaves, said wedge means moving past dead center position when completely attached to the spring, thereby to hold the device on the spring.

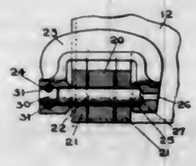
---



1,693,566. FISH SCALER. CHARLES T. PFLUEGER, Akron, Ohio, assignor to The Enterprise Manufacturing Company, Akron, Ohio, a Corporation of Ohio. Filed Feb. 23, 1926. Serial No. 90,013. 2 Claims. (Cl. 17—3.)

1. A fish scaler having a handle, one extremity of which is bent downwardly to form a flange, and a strip of metal secured at its ends to the flange to form a head and having teeth along its lower edge, the metal being bent to form a sharp angle.

---

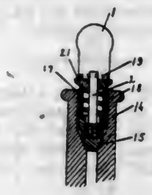


1,693,567. LUBRICATING APPARATUS. JOHN N. ROBIN, Chicago, Ill., assignor to Alemite Manufacturing Corporation, Chicago, Ill., a Corporation of Delaware. Filed Apr. 27, 1923. Serial No. 634,943. 14 Claims. (Cl. 285—104.)

1. A coupling device for high pressure lubricating systems comprising a first body member, one end of which has a bore formed therein, and the other end of which is bifurcated, the inner sides of the bifurcations being flat and parallel, one of said bifurcations having an internally threaded depression formed in its inner side, and the other of said bifurcations having an opening extending therethrough in registry with said depression, said first body member having a duct therein for establishing communication between said bore and the bottom of said depression, a swivel member having one end secured in said bore and having a bore communicating with said first named bore, a coupling sleeve swiveled on said swivel member, a second body member, one end of which has a bore formed therein, and the other end of which has parallel sides received between said bifurcations, there being a laterally opening depression formed in said last named end of said second body member and communicating with said last named bore, a washer for closing the open end of said depression, a screw extending through the openings in said bifurcation and washer and threaded into said internally threaded depression, said screw having a longitudinal bore communicating with said duct and a lateral bore for establishing communication between said last named bore and the depression in said second body member, oppositely disposed cup leathers in said last named depression, a spring for holding one of said cup leathers in contact with the bottom of said last named depression, and the other of said cup leathers in contact with said washer, and a cup-shaped member swiveled upon the end of said second body member which is provided with a bore, said cup-shaped member having an opening through the bottom thereof for establishing communication between it and the bore in the last mentioned end of said second body member.

---

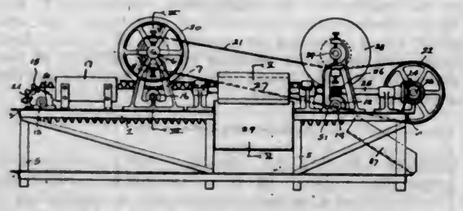
1,693,568. CONVEYER FOR HEATING FURNACES. DAVID L. SUMMEY, Waterbury, Conn. Original application filed July 28, 1923, Serial No. 654,295. Divided and this application filed Mar. 26, 1927. Serial No. 178,650. 5 Claims. (Cl. 198—151.)



1. In combination, a plurality of conveyer links, overlapping perforated lugs on adjacent links, pivot pins passing through said perforations to connect the links into the form of an endless conveyer chain, shackles straddling the overlapping lugs and in which the ends of the pins are journaled, the shackles having means for preventing endwise movement of the pivot pins.

---

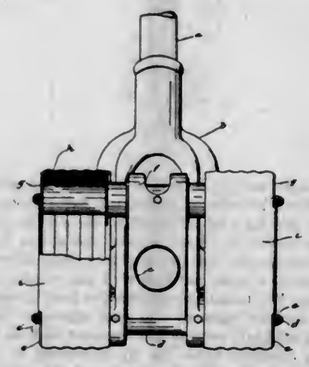
1,693,569. STOPPER FOR BOTTLES. THEODOR WILHELM, Zurich, Switzerland. Filed Oct. 28, 1926, Serial No. 144,722, and in France Mar. 6, 1926. 2 Claims. (Cl. 215—52.)



1. Stopper made from materials not transmitting the heat, the stopper fitted with a cylindrical part and a round head, a pin, fixed into the head of the stopper, a washer fitting tightly around the pin, made from material transmitting the heat, an elastic ring around the pin, an air tight chamber between elastic ring, washer and stopper, a lever on top of the pin, pressing the washer down, whereby

the elastic expanding ring is pressed against the wall of the bottle by the compressed air and the stopper is arrested in the bottle.

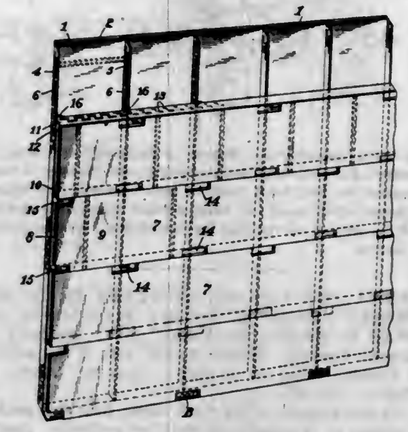
---



1,693,570. FISH-CLEANING MACHINERY. BALDWIN VALE, San Francisco, Calif., assignor to Roy L. Daily, San Francisco, Calif. Filed June 30, 1924. Serial No. 723,250. 8 Claims. (Cl. 17—3.)

1. In a fish cleaning machine, fish cutting means, endless conveying means to move the fish into engagement with said cutting means, clamps on the conveyor to retain the fish thereon, a depression plate having an upwardly curved end positioned above the conveyor, and a second plate having upwardly and inwardly inclined ends positioned between the parallel sides of the conveyor and below the depression plate to move the conveyor upwardly to cause the fish to contact with the depression plate whereby the fish are firmly engaged by said clamps.

---



1,693,571. SHOCK ABSORBER. LESTER BENSON, Willoughby, Ohio, assignor to The Glenn L. Martin Co., Cleveland, Ohio, a Corporation of Ohio. Filed June 9, 1926. Serial No. 114,755. 2 Claims. (Cl. 267—63.)

1. In a shock absorber of the class described, the combination with the supporting and supported members thereof, comprising opposite spools, of a plurality of rubber strands extending from spool to spool and operatively connecting the same to prevent the transmission of shock from the one to the other, and a replaceable rubber closure for said spools and rubber strands protectively inclosing the same and augmenting the shock absorbing quality, substantially as set forth.

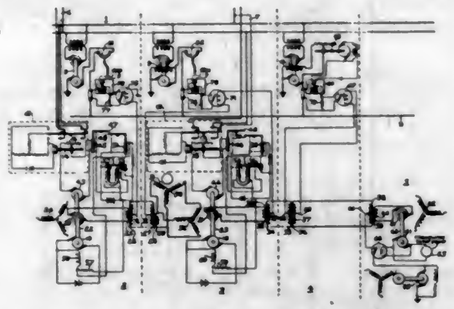
---

1,693,572. INTERIOR-WALL CONSTRUCTION. JACOB B. BLAW, Atlantic City, N. J.; Sadie H. Blaw executrix of said Jacob B. Blaw, deceased. Filed Apr. 29, 1927. Serial No. 187,554. 6 Claims. (Cl. 72—46.)

1. A plaster slab for walls and ceilings having angular reinforcing members extending along their long dimensions, each of said slabs having cut out portions adjacent the reinforcements and at the four corners of the slabs and wooden blocks placed within certain of said cut away portions.

---

1,693,573. CELLULOSE PRODUCT AND METHOD FOR PRODUCING SUCH PRODUCT. WILLIAM W. CARTER, Needham, Mass., assignor of one-half to Henry T. Nelson, Boston, Mass. Filed Dec. 27, 1922. Serial No. 609,297. 3 Claims. (Cl. 91—68.)



1. The method of producing a sized xanthated fibre which comprises permeating the fibre with the size prior to xanthation and then xanthating the fibre.

---

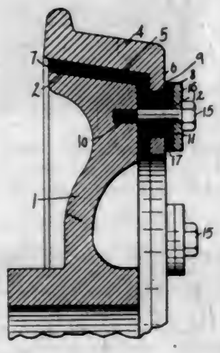
1,693,574. SYSTEM OF DISTRIBUTION. ALMON W. COPLEY, San Francisco, Calif., and ROBERT D. EVANS, Wilkinsburg, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Original application filed Nov. 7, 1917, Serial No. 200,664. Divided and this application filed May 28, 1923. Serial No. 641,872. 43 Claims. (Cl. 171—312.)

39. In a regulator system, a supply circuit, a measuring device actuated in accordance with supply-circuit con-

ditions, a pulsating-current generator controlled thereby, and means controlled by said device and generator for governing the load on said circuit.

42. In a distribution system, a distribution circuit, a plurality of translating devices connected thereto, a relay responsive to the total load on said devices and means associated with each of said devices controlled jointly by said relay and by the load on each device, for controlling said device.

---

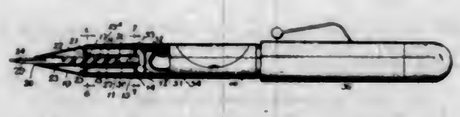


1,693,575. PREPARATION OF FRESH FRUIT FOR MARKET. ERNEST M. BROGDEN, Santa Monica, and MILES L. TROWBRIDGE, Palms, Calif., assignors to Brogdex Company, Winter Haven, Fla., a Corporation of Florida. Filed Dec. 2, 1925. Serial No. 72,808. 11 Claims. (Cl. 99—1.)

1. In the preparation of fresh citrus fruit for market, the process of treating such fruit for protection against blue mold and other forms of decay, which comprises subjecting the entire surface of fresh citrus fruit to the conjoint action of soap and borax in aqueous solution and in concentration sufficient to exert a substantial inhibiting effect on blue mold.

7. As a new article of manufacture, a composition comprising a mixture of a mold-retardant and an oil-solubilizing agent in finely divided solid condition, the proportion of said oil-solubilizing agent being less than that of said mold-retardant.

---



1,693,576. CAR WHEEL. JAMES E. HALE, Summit County, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed June 20, 1927. Serial No. 200,037. 1 Claim. (Cl. 295—11.)

A car wheel comprising a wheel body having a tapered outer periphery, a tire adapted to fit about the body and having a tapered inner periphery, a layer of rubber under compression located between the outer periphery of the wheel and the inner periphery of the tire about their adjacent surfaces, and securing means to hold the elements together, said securing means being seated in one of the elements but maintained out of contact with the other element by a cushioning medium.

---

1,693,577. MAGAZINE PENCIL. JOHN STRAKA, Chicago, Ill., assignor, by direct and mesne assignments, to The Wahl Company, Chicago, Ill., a Corporation of Delaware. Filed Sept. 25, 1920, Serial No. 412,796. Renewed Oct. 31, 1925. 10 Claims. (Cl. 120—18.)

4. A lead pencil comprising a handle open at one end, a pencil tip rotatably and removably engaging the open end of said handle, a helical guide having a portion located within said tip, complemental clutch means carried by the handle and the helical guide respectively to normally prevent relative rotation of said handle and said guide, a lead propelling pin operable in and by said helical guide, and means for effecting relative rotation of said guide pin and said helical guide during relative rotation of said handle and said tip.

---

1,693,578. MAGAZINE PENCIL. JOHN STRAKA, Chicago, Ill., assignor, by direct and mesne assignments, to The Wahl Company, Chicago, Ill., a Corporation of Delaware. Filed Apr. 18, 1921. Serial No. 462,146. 18 Claims. (Cl. 120—18.)

7. A pencil having a hollow body, a tip therefor removably fitted thereto to rotate relative thereto, a spiral carried by the tip and extended to lie within the body, a plunger mounted to travel within the spiral to advance a lead therethrough, an element projecting laterally from the plunger to a point exteriorly of the spiral, and means surrounding the spiral and within the body forming a longitudinal channel open at the end adjacent the tip and adapted to slidingly engage said element to hold the plunger against rotation when the tip is turned to effect propulsion of the plunger, the tip together with the parts carried thereby being removable from the channeled means and body by direct longitudinal movement of the tip relative to the body substantially as described.

1,693,579. MAGAZINE PENCIL. JOHN STRAKA, Kent, Ohio, assignor to The Wahl Company, Wilmington, Del., a Corporation of Delaware. Filed Aug. 16, 1922. Serial No. 582,142. 3 Claims. (Cl. 120—18.)

1. In a mechanical pencil, a hollow barrel forming a handle portion, an inner tube in said hollow barrel of reduced cross-sectional area at one end, a tip rotatably and removably secured at one end of said barrel, an extension on said tip adapted to extend into the reduced end of said inner tube, a lead propeller in said extension, and a clearance space between said reduced end of the inner tube, and said hollow barrel to receive extra leads which become readily accessible upon removal of the tip.

3. In a pencil, a hollow barrel, an inner tube located within the barrel and having a reduced portion spaced from the interior of the barrel to provide a lead magazine, said inner tube also having an enlarged portion providing an extra lead magazine, and removable closure means for the respective magazines.

## Amendments and Status Letters.

DIVISION OR ROOM NUMBER SHOULD BE INDICATED.

Attorneys and applicants should, in making amendments and in writing letters asking for the status of applications, indicate the division to which the application was assigned or the room number of the division.

If papers are thus marked, it will save a large amount of time of this Office in looking up the records in order to ascertain to what divisions they should be sent.

## Interference Notice.

U. S. PATENT OFFICE, *Washington, Nov. 21, 1928.*

*Chas. Anderson, his assigns or legal representatives, take notice:*

An interference having been declared by this Office between the application of Limoneira Company, Santa Paula, Calif., for registration of a trade-mark and trade-mark registered December 11, 1923, No. 177,148, to Chas. Anderson, Wasco, Calif., and a notice of such declaration sent by registered mail to said Chas. Anderson at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Chas. Anderson, his assigns or legal representatives, shall enter an appearance therein within 20 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
*First Assistant Commissioner.*

# DECISIONS IN PATENT AND TRADE-MARK CASES.

## Commissioner's Decision.

FABRIQUE DES LONGINES FRANCILLON & CO., S. A., BY ITS U. S. AGENT, A. WHITTNAUER CO., *v.* O. MAIRE, INC.

*Decided May 3, 1928.*

TRADE-MARKS—SIMILARITY—"LONGIA" AND "LONGINES."

The word "Longia," as a trade-mark for watches, *Held* to be deceptively similar to the mark "Longines," as applied to the same class of goods.

APPEAL from Examiner of Interferences.

Opposition No. 7,120 by Fabrique des Longines Francillon & Co., S. A., by its U. S. agent, A. Whittnauer Co., to registration of trade-mark for watches of O. Maire, Inc. Application filed September 29, 1925, Serial No. 220,964, published March 2, 1926.

*Mr. Edward M. Evarts* for the opposer.

*Mr. W. H. Swenarton* for the applicant.

MOORE, *Assistant Commissioner:*

The applicant, O. Maire, Inc., appeals from the decision of the Examiner of Interferences sustaining the opposition of the opposer, Fabrique des Longines Francillon & Co., S. A., by its U. S. agent, A. Whittnauer Co., and adjudging that the applicant is not entitled to the registration for which it has made application.

The Examiner of Interferences sustained the opposition on the ground that the applicant's mark and the opposer's mark so nearly resemble each other as to be likely to cause confusion in trade.

The stated reasons for appeal are too general. They fail to point out specifically any error in the decision of the Examiner of Interferences. To merely allege that the Examiner of Interferences erred in sustaining the opposition, in not dismissing the opposition, and in not adjudging applicant entitled to the registration for which it has made application, gives no aid to the appellate tribunal in reviewing the decision of the Examiner of Interferences.

From the facts admitted by the applicant in his answer to the notice of opposition, and from the agreed state of facts stipulated into the record, it appears that the opposer adopted and used its trade-mark "Longines" prior to the adoption and use by the applicant of its trade-mark "Longia," that the applicant's merchandise and the opposer's merchandise have the same descriptive properties, and that the opposer has spent large sums of money—viz, upwards of $500,000—in advertising its trade-mark and the goods to which it is appropriated, and has built up and still retains a very valuable equity in its trade-mark and the good will of the business in which the mark is and has been used.

Section 5 of the Trade-Mark Act of Feb. 20, 1905, provides:

That trade-marks which are identical with a registered or known trade-mark owned and in use by another and appropriated to merchandise of the same descriptive properties, or which so nearly resemble a registered or known trade-mark owned and in use by another and appropriated to merchandise of the same descriptive properties as to be likely to cause confusion or mistake in the mind of the public or to deceive purchasers shall not be registered.

As the trade-mark "Longines" was known and in use by the opposer and was registered prior to the adoption and use by the applicant of its trade-mark "Longia," and as the two marks are appropriated to goods of the same descriptive properties, the sole remaining question for consideration is whether the two marks so nearly resemble each other as to be likely to cause confusion or mistake in the mind of the public or to deceive purchasers.

It is stipulated that two pronunciations of the word "Longines" are "Lon-jeens" and "Lonjeen," respectively, while one pronunciation of the word "Longia" is "Lon-jee-a."

I am of the opinion that the two marks so nearly resemble each other as to be likely to cause confusion or mistake in the mind of the public or to deceive purchasers when concurrently appropriated to goods of the same descriptive properties.

A comparison of the two marks shows that they are identical both as to appearance and sound with respect to the first and major part of the words constituting the marks—viz, "Longi." They differ only with respect to the endings of the two words, the one ending with "a" and the other with "nes." It is believed that this slight difference would not be observed and carried in the mind of the average member of the purchasing public; but should the difference be observed and remembered the applicant's mark would be likely to be regarded as a mere variant of the opposer's mark.

The principles applied by the Court of Appeals of the District of Columbia in *Guggenheim* v. *Cantrell & Cochrane*, 352 O. G. 533, 56 App. D. C. 100, 10 F. (2d) 895, 1926 C. D. 221, are applicable to the instant case, and in view thereof registration of the applicant's mark must be refused.

The decision of the Examiner of Interferences is affirmed.

---

## Court of Appeals of the District of Columbia.

THE MANHATTAN SHIRT CO. *v.* NATIONAL DEPARTMENT STORES, INC.

*No. 2,953. Decided June 4, 1928.*

TRADE-MARKS—SIMILARITY—"NADSCO" AND "MANSCO" NOT DECEPTIVELY SIMILAR.

The term "Nadsco" *Held* not deceptively similar to the term "Mansco" in view of the custom of building up trade-marks from initials and the common practice of ending them with the letters "co" and "sco."

APPEAL from Patent Office. Affirmed.

*Mr. Louis Alexander* for The Manhattan Shirt Co.
*Mr. J. K. Brachvogel* and *Mr. H. E. Seidel* for National Department Stores, Inc.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

ROBB, *J.*:

Appeal from a Patent Office decision dismissing appellant's opposition to the registration by appellee of the word "Nadsco" arranged within a diamond outline, the letters becoming smaller towards the narrower portions of the diamond.

Prior to the adoption and use by appellee of its mark, appellant adopted and registered the word "Mansco" arranged above a representation of an electric fan.

The Assistant Commissioner pointed out that it was common practice "to build up trade marks from initial and other letters of firm or corporate names," and that such notations or marks "very frequently end with the letters 'co' or even 'sco'." It is apparent that this practice was followed by the parties in this case. We agree with the Patent Office that the two marks here involved are sufficiently dissimilar as to permit their concurrent use without the likelihood of confusion.

Decision affirmed.

Affirmed.

## U. S. Circuit Court of Appeals—Third Circuit.

WILLIAM A. MURRAY SPRING CO. *v.* FORT PITT BEDDING CO.

*Decided January 19, 1928.*

[23 F. (2d) 559.]

PATENTABILITY—SPRING SEAT FOR AUTOMOBILES.

The Murray patent, No. 1,172,724, for a small unitary self-contained unattached spring seat for automobiles, *Held* valid, since the record shows that the solution of the problem which the patentees solved was not self-evident, "for the proofs show a long series of futile attempts to make a satisfactory seat before this successful device was lighted on."

APPEAL from the District Court of the United States for the Western District of Pennsylvania; Frederic P. Schoonmaker, Judge.

Suit in equity by the William A. Murray Spring Company against the Fort Pitt Bedding Company. Decree for defendant, and complainant appeals. Reversed and remanded.

*Mr. Walter F. Murray* for the appellant.

*Mr. E. W. McCallister, Messrs. Green & McCallister,* and *Mr. Alfred M. Houghton* for the appellee.

Before BUFFINGTON, WOOLLEY, and DAVIS, Circuit Judges.

BUFFINGTON, *Cir. J.*:

In the court below the Murray Spring Company, owner of Patent No. 1,172,724, granted February 22, 1916, to the Murrays for a spring seat, charged the Fort Pitt Bedding Company with infringement thereof. On final hearing that court held the patent invalid, and from a decree dismissing the bill this appeal was taken.

The patent concerns a small, removable, unitary, self-contained, unattached spring seat, adapted to be used in automobiles and other vehicles, in which the spring inclosing and supporting frame has leather or fabric covering. The general make-up of such seats in use before this patent and the well-known elements used therein may be thus described: Several rows of spiral springs were located between an upper and lower square or oblong metallic frame or rim. Within the upper frame the broader ends of the spiral springs were placed, and secured to each other and to the inclosing frame by clamps. The lower ends of the springs were attached to metallic cross strips, which at their ends overlapped and were clamped to the lower supporting frame or rim. The upper frame was covered with a sheet of leather or fiber covering, and the edges thereof were then drawn down and fastened to the lower supporting frame or rim, by being overlapped over the several portions between the overlapping ends of the cross strips. A sleeve or envelope was then used to clamp the leather or other covering to that section of the lower supporting frame between the several overlapping cross-strip ends.

It will be observed that the cross-strip ends so overlapped the rim or lower frame as not to allow the enveloping sleeve to be carried over them. This general construction was used by Murray and other spring makers for a long time prior to the patent. It was open to objection, in that it did not afford a satisfactory means of completely attaching the leather or other covering to the lower supporting frame and protecting it from wear. Murray's invention was exceedingly simple, but, like many other devices of a simple nature, effected so marked an improvement over the old form as to result in a sale thereof by the plaintiff company and to a copying thereof by the defendant. This change consisted simply in taking the old lower supporting frame, with its cross-strip supporting member, and making such a groove or recess on the lower side of these cross strips that the plurality of enveloping sleeves located between the clamping ends of the transverse sections could be dispensed with, and be replaced by an unbroken continuous sleeve, which extended over the whole length of the rim of the lower supporting frame.

We assume that all of these elements, in and of themselves—to wit, the spiral springs, the upper and lower supporting frames, and cross strips—were old, and there was no inventive act involved in merely putting a groove of any particular shape in a cross strip, but Murray was the first to have conceived and made the combination of, first, a bottom frame; second, cross strips secured to the frame and inwardly-projecting offsets adjacent to the frame; third, a sleeve which covered the whole side length of the frame rim and fitted into the cross-strip offsets, and which clamped the entire length of the lower edge of the seat covering to the entire length of the rim of the bottom frame; or, as stated in the third claim, first, a new article of manufacture; second, a metallic cross strip for vehicle seats having adjacent to its ends transverse offsets; third, offsets adapted to receive the edge of the covering of a seat. This device, under the proofs, was highly acceptable to the trade, and from the time the patent was granted until 1917 some 400,000 sets of Murray's seats were sold. At this time the Government took over the plaintiff's plant for use in making machine-gun and rifle springs, and their ordinary trade was abandoned or drifted away, until they again started in 1919, from which time they have built up an increasing trade.

The proof is that in the older method—

the upholstering was made in a pad for the seat, with the skirts, the side curtains, hanging down enough to wrap around the underneath frame, and then there were clips or sections of molding that fastened between—around that, in between the cross-strips. You could not put a straight molding clean through, on account of the cross-strip interfering.

The trade objected to the wearing of the fabric at the intersection of the cross strips, and the advantage of the patented article over the old method was that—

they could put the curtain clean along the bottom, and fold it clean in, and put the strip of molding all the way through, and it protected the whole bottom; it kept the cross-section strip off the seat, the wooden seat or platform that it rested on, and the molding protected the fabric all the way around the seat.

For their disclosure the Murrays were awarded the patent in suit, and the prima facie of invention evidenced by the issue of such patent is not overcome by the defendant, and apart from that we are of opinion tht devict involved invention.

We have not overlooked the patents referred to by the court below as justifying it in holding the patent in suit void of invention. To us, however, it is clear that none of them involved the problem which the patent before us solved, and which the needs of the trade in which the two patentees were working called on their company to solve. Not involving the problem the Murrays did solve, these prior patents gave them no help in its solution. Homan's patent, No. 519,792 of 1894, was not for an unattached, self-contained, removable spring seat, but was for an immovable and fixed chair seat, which was mortised to the legs of the chair. Murray's patent, No. 692,535, was also for an immovable chair or couch seat, and was addressed to the problem, not of protecting the fiber or covering of a seat, but to a strengthening problem, namely, as stated—

to provide cross-strips which offer the maximum resistance to a bending strain with the smallest amount of metal, which affords seats into which the springs are readily placed and locked, and which are simple and inexpensive in their construction.

The depressions in the cross strip of this patent extended across, and were made by the whole width of the seat, and such depression was used to permit the springs to be seated in a lower level. It did not clamp the covering to a movable seat, but attached it to the frame of the chair or couch.

Without entering into details as to the other patents for the seats of railroad and street cars, we are of opinion that they are still further removed from the field which the plaintiff and defendant serve, and we find none of them threw any light whatever on the problem which the Murrays solved; and in that connection we may say that its solution was not self-evident, for the proofs show a long series of futile attempts to make a satisfactory seat before this successful device was lighted on. While the defendants, with a litigant's breath, extol these prior patents to minimize the plaintiff's device, yet in their business practice they magnify that device by using it alone, and minimize what in litigation they praise by ignoring the aid of every feature of it. They fail in their shop work to practice what they preach in proof, and, as always, their actions speak louder than their words. The Murrays' combination for the first time showed use of a continuous sleeve which protected every part of the edges of the seat covering, and for the first time a transverse groove in a cross strip so located as to allow use of such continuous clamping enveloping sleeve. As a practical result, the combination embodying these elements, for the first time in the art, produced for the first time in the art a unitary removable spring seat with the full length of the edges of its covering completely enveloped and clamped by a continuance sleeve which prevented abrasion of such covering. It was this combination, original in conception as a combination and strikingly useful in combination product, that made this simple unitary device worthy of patent protection.

The decree below will therefore be reversed, and the record remanded for the entry of a decree of validity and accounting.

(C. C. A. Ill.) Gardner patent, No. 1,450,032, for improvements in air compressor to supply air for automobile tires, claims 4, 14, 16, 20, 24, 42, 47, 49, and 51 *Held* invalid. *Wall Pump & Compressor Co.* v. *Gardner Governor Co.*, 28 F. (2d) 334.

## Adverse Decisions in Interference.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,588,174, E. A. Dewald, Method of making fintube heat exchangers, decided November 15, 1928, claim 1.

Pat. 1,008,468, H. N. Schramm, Universal chassis, decided November 15, 1928, claims 13, 14, 41, and 42.

Pat. 1,631,759, Rhoades and McKinley, Method and means for skimming glass, decided October 13, 1928, claims 1 and 4.

Pat. 1,675,599, L. G. Copeman, Sharp-freezing container for mechanical refrigerators, decided October 27, 1928, claims 8 and 10.

Final decision in interference has been rendered against the following trade-mark:

T. M. 119,656, Seeded raisins, dried peaches, pitted plums, figs, nectarines, apricots, and pears. Castle Bros. Registered December 11, 1917. Decided October 11, 1928.

# TRADE-MARKS

OFFICIAL GAZETTE, DECEMBER 4, 1928.

[VOL. 377. No. 1.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for " under the ten-year proviso " are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

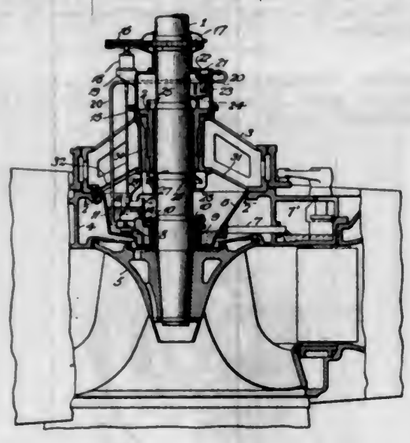
1,693,598. POLISHING PAD FOR LENSES AND PROCESS OF MAKING SAME. JOHN D. GAMBLE, Indianapolis, Ind., assignor to Continental Optical Corporation, Indianapolis, Ind., a Corporation. Filed Sept. 6, 1927. Serial No. 217,652. 2 Claims. (Cl. 51—278.)

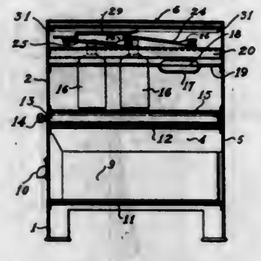


1. The process of making a lens polishing pad, which process consists in saturating a pad composed of felt and the like with pitch material, and thereafter extracting such pitch material from one side of the pad to the desired degree, substantially as set forth.

1,693,599. TELEPHONE SYSTEM. CHARLES GILLINGS, Liverpool, England, assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Feb. 10, 1925, Serial No. 8,271, and in Great Britain Feb. 15, 1924. 15 Claims. (Cl. 179—27.)

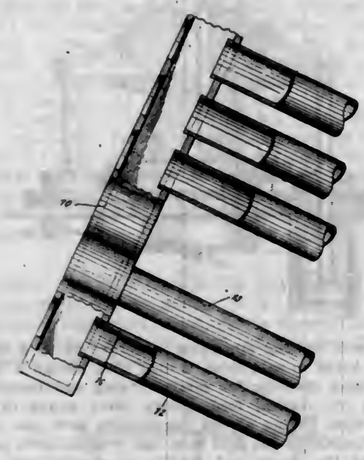
15. In a telephone system, a group of private branch exchange lines, and a repeater individual to each of said lines for use by such lines when calling and for transmitting ringing current and feeding talking battery to said lines when called.

1,693,600. OIL AND WATER CONTROL FOR HYDRAULIC-TURBINE BEARINGS. WILLIAM F. GRANT, Newport News, Va., assignor to Newport News Shipbuilding and Dry Dock Company, a Corporation of Virginia. Filed Mar. 9, 1928. Serial No. 260,447. 6 Claims. (Cl. 253—26.)



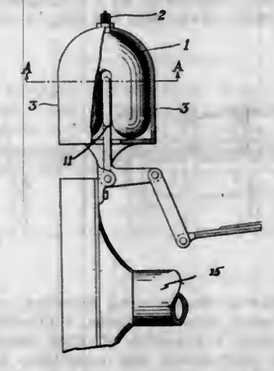
1. In a hydraulic turbine having a central shaft, a main bearing, an oil supply for lubricating the same, a pan or receptacle comprising separate compartments adapted to contain oil and water respectively, a packing gland connected with the bottom of said receptacle and surrounding said shaft, the top of said receptacle being substantially unobstructed whereby said packing gland is rendered accessible, and means for conveying oil and water away from said receptacle.

1,693,601. SHOE-SHINING APPARATUS. FRANK A. GROVES, Dayton, Ohio. Filed May 21, 1926. Serial No. 110,803. 1 Claim. (Cl. 15—265.)



In combination, a cabinet, a folding top therefor, a platform therein for supporting a collapsible shoe supporting means, and a collapsible shoe supporting means adapted to be moved into operative position by forward pressure thereon of the foot of the user when the top of the cabinet is open, said shoe supporting means consisting of a shoe support, arms pivoted thereto,

said arms being also pivoted on said supporting platform, and means on said arms to limit the forward movement whereby the continued pressure of the foot on the shoe support will maintain it in position.

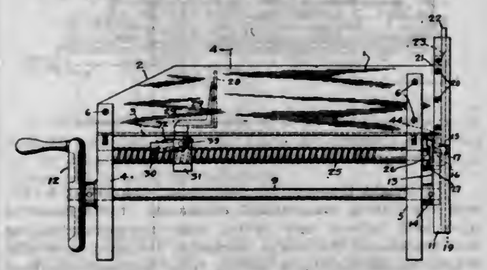


1,693,602. STEAM BOILER. ISAAC HARTER, Dongan Hills, N. Y., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Mar. 30, 1922. Serial No. 548,185. 7 Claims. (Cl. 122—360.)

1. In a water-tube boiler, water chambers and water tubes connected to said chambers with their ends expanded into the walls of the chambers, certain of said tubes having end portions with walls thinner than the walls of the remaining portions of such tubes, and others of the tubes having a substantially uniform wall thickness throughout which is less than that of the body portions of the tubes having thinned end portions, the exterior diameters of all portions of the tubes being substantially uniform throughout their length, and all of the tubes having substantially the same external diameter.

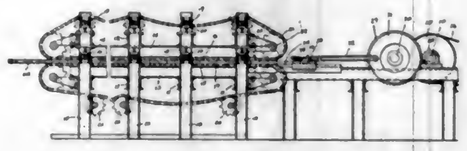
1,693,603. ANTIFRICTION AIR-SPRING ASSEMBLY. JOHN ALLEN HEANY, New Haven, Conn., assignor to Heany Laboratories, Inc., New Haven, Conn., a Corporation of Connecticut. Filed Dec. 31, 1921, Serial No. 526,442. Renewed Apr. 13, 1927. 12 Claims. (Cl. 267—35.)

4. In a shock absorber, the combination of a casing having a grooved channel formed interiorly thereof, a resilient member enclosed by and movable bodily within said casing, and a projecting rib formed on said resilient member adapted to cooperatively engage said channel and



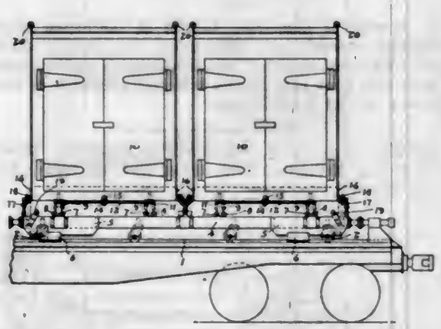
maintain said member and casing in a predetermined relative position, said casing having a cross sectional area greater than that of the tube.

1,693,604. BURNER WICK. ANDREW HELDRICH, New Brunswick, N. J., assignor to American Incubator Manufacturing Co., Inc., a Corporation of New Jersey. Filed Aug. 15, 1924. Serial No. 732,150. 11 Claims. (Cl. 67—69.)



1. A wick or flame-ring formed of fabricated strands relatively crossed and respectively composed of fibrous and nonfibrous material, the fabricated structure having a zone free from said fibrous material, arranged to retard the flow of fuel therethrough.

1,693,605. MACHINE FOR SLICING CHEESE. EDWARD E. HOLLE, Arlington, N. J. Filed Nov. 19, 1927. Serial No. 234,372. 7 Claims. (Cl. 31—20.)



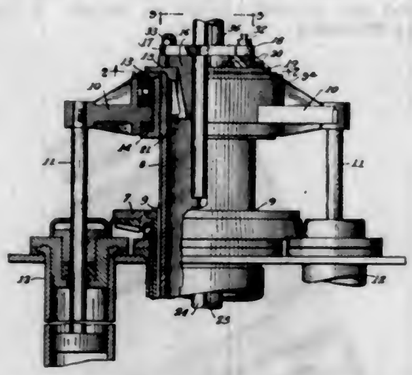
2. A machine for slicing cheese comprising in combination, a stationary trough, a pusher mounted in said trough, a cutter frame mounted at one end of said trough, a cutter blade in said frame, said frame having a slotted lower portion extending below the trough, guides for guiding the cutter frame and blade in a fixed vertical plane, a drive shaft mounted below and extending longitudinally of said trough, a crank carried by the drive shaft, a roller carried by the crank and engaging the slot in the cutter frame so as to reciprocate the frame and blade from below the trough, and means operable by said crank for advancing the pusher a predetermined distance after the cutter blade has returned above the path of travel of the cheese.

1,693,606. GLUING MACHINE. RICHARD COCKE JONES, deceased, Louisville, Ky., by Daphne Selden Jones, administratrix, Louisville, Ky., assignor to Gamble Brothers, Inc., Louisville, Ky., a Corporation. Filed June 11, 1927. Serial No. 198,224. 7 Claims. (Cl. 144—279.)

1. A machine of the character described, comprising a plurality of upper clamping chains, a plurality of lower clamping chains, a plurality of idler sprocket wheels for carrying said chains and permitting them to be moved longitudinally of the machine, said upper and lower chains being so spaced from each other as to permit a plurality of aligned boards to be clamped therebetween, and means for forcing said boards together against the resistance exerted in the movement of said chains for jointing them and simultaneously moving said boards and chains towards the discharge end of said machine.

1,693,607. FREIGHT-TRANSPORTING EQUIPMENT. WILLIAM PLATTS KELLETT, Brantford, Ontario, Canada. Original application filed Aug. 12, 1926, Serial No. 128,846. Divided and this application filed Sept. 21, 1927. Serial No. 221,084. 4 Claims. (Cl. 105—366.)

1. A freight transporting equipment, comprising a railway car having longitudinal trackways, trucks mounted upon said railway cars having roller supports engaging said trackways, transverse trackways arranged upon said trucks, goods containers having roller supports mounted on the transverse trackways on said trucks, means for locking the containers on said trucks, and means for locking said trucks on said cars.



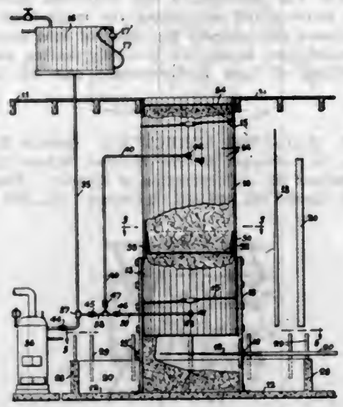
1,693,608. ELECTRIC SWITCH. SAMUEL LIPPERT, Garfield Heights, Ohio, assignor to The Outlook Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 13, 1924. Serial No. 719,721. 7 Claims. (Cl. 200—164.)

1. In a switch of the character set forth, the combination of a pivoted lever, a pair of opposed resilient contact leaves between and in substantially parallel relation to which the lever is adapted to swing, and a contact member carried by and extending transversely of the lever and arranged for wiping engagement with the contact

leaves when the lever is swung between them, the leaves being curved on an arc substantially concentric with the pivotal axis of the lever.

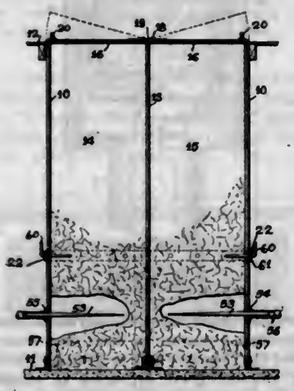
1,693,609. WELL-DRILLING APPARATUS. GERALD R. LIVERGOOD, Houston, Tex. Filed Apr. 25, 1924. Serial No. 708,844. 17 Claims. (Cl. 255—22.)

1. In well drilling apparatus, a rotary table, a sleeve slidingly keyed to said table, a drill stem havign a longitudinal drive shoulder for rotary driving and transverse shoulders for vertical feed, rotary drive means carried by the sleeve having sliding engagement with the longitudinal shoulder of the drill stem and vertical drive means carried by the sleeve and readily engageable with and disengageable from the transverse shoulders of the drill stem.



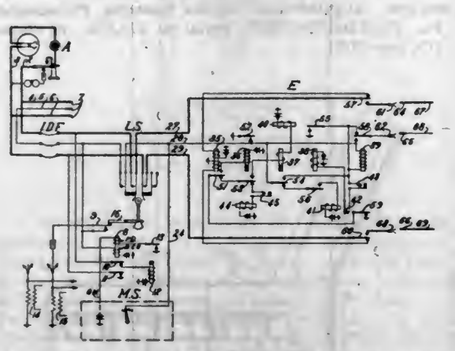
1,693,610. ART OF PRODUCING TUBULAR ARTICLES. ALBERT C. LUSHER, Waterbury, Conn., assignor to Scovill Manufacturing Co., Waterbury, Conn., a Corporation of Connecticut. Filed Feb. 2, 1922. Serial No. 533,705. 2 Claims. (Cl. 29—157.)

1. The herein described method of producing partially assembled tire valves which comprises extruding a slug into a headed tube, annealing said tube, positioning therein an abutment for a valve mechanism, threading the exterior of said tube, reducing the unheaded end of the tube, and forming, adjacent the head, a thickened wall for the tube, capable of being grooved.



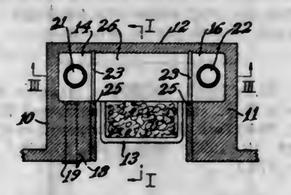
1,693,611. MANUFACTURE OF LIVESTOCK FEEDS. CHARLES R. MABEE, Buffalo, N. Y., assignor to Mabee Patents Corporation, Dover, Del., a Corporation of Delaware. Filed Sept. 23, 1925. Serial No. 58,125. 7 Claims. (Cl. 99—2.)

1. The method of producing a live stock feed which includes introducing farm roughage into a vertical container arranged to permit the withdrawal of treated roughage from the base thereof, packing the roughage and subjecting the same to a conversion treatment, and subsequently causing the lower portion of said mass to be laterally moved bodily to a point at one side of the container to permit the remainder of the mass to move downwardly through said container.



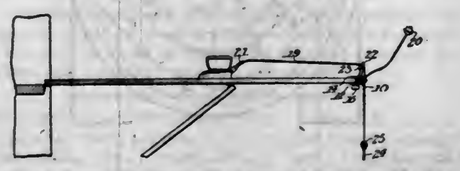
2. In apparatus for the preparation of live stock feed, the combination with a vertical container for the treatment of a mass of farm roughage, of means to laterally displace the lower portion of a column of roughage, said means including a member arranged to be extended about one side of a mass of roughage adjacent the base of said container.

1,693,612. MANUFACTURE OF LIVESTOCK FEEDS. CHARLES R. MABEE, Buffalo, N. Y., assignor to Mabee Patents Corporation, Dover, Del., a Corporation of Delaware. Filed Sept. 23, 1925. Serial No. 58,126. 4 Claims. (Cl. 99—2.)



4. Apparatus for the treatment of farm roughage including a vertical container, means at the top of the container to permit the introduction of the roughage therein, means at the bottom of the container to permit the withdrawal of roughage therefrom, a lever extending through one of the walls of said container for loosening a packed mass of roughage in the lower portion thereof, and removable pins extending through certain of the walls and extending into the interior of the container at a point above said lever releasably to support material within said container.

1,693,613. TELEPHONE SYSTEM. TALBOT G. MARTIN, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Feb. 17, 1926. Serial No. 88,793. 9 Claims. (Cl. 179—27.)

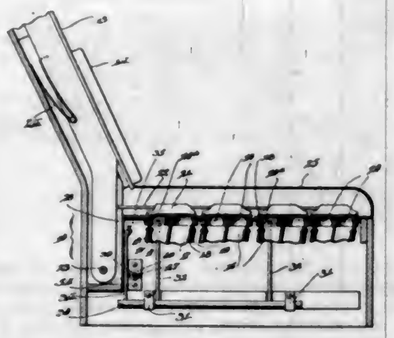


7. In a telephone system, telephone lines of different character, means whereby an operator may answer calls from any of said lines, means for indicating to the operator the character of the calling line including a tone source for connection with the sleeves of the lines, and means for applying the current from said source to said sleeve on originating calls only and for preventing said tone current from standing on the sleeves when the lines are idle.

1,693,614. AIR-CIRCULATING FIREBACK. WILLIAM J. MCCAIN, Livingston, Ala. Filed June 11, 1928. Serial No. 284,643. 4 Claims. (Cl. 126—131.)

1. In an air circulating fire back for fire-places, a manifold at each end of the fire back, air conduits connected to the manifolds, and a removable heat transfer section interposed between the manifolds.

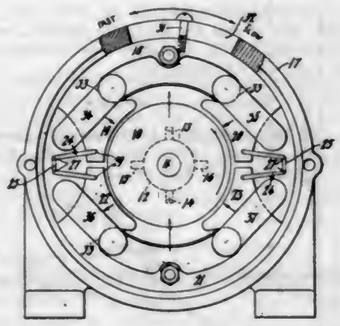
1,693,615. IRONING-BOARD APPLIANCE. RAYMOND J. MCJOHN, Chicago, Ill. Filed Oct. 16, 1925. Serial No. 62,821. 1 Claim. (Cl. 248—30.5.)



In a device of the character described, the combination of a bracket member whereby the device may be attached

to an ironing board, a pair of laterally separated cord supporting elements arranged at and projecting from an edge of the bracket, one of said elements being extended upwardly to provide means for supporting a cord section which extends therefrom to the iron in substantially parallel relation to the face of the ironing board, said cord supporting elements providing means which co-operate with each other to arrange another portion of said cord along and beyond an edge of the bracket member, and one of said cord supporting elements providing means for securing the cord to the bracket.

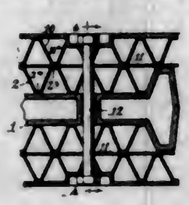
---



1,693,616. ACCORDION. FRANK NARDONE, Philadelphia, Pa. Filed Mar. 28, 1927. Serial No. 178,826. 12 Claims. (Cl. 84—376.)

3. In an accordion having rows of wind cells, openings in the wind cells, valves for closing the openings and valve slides adapted to close certain of the openings independently of the valves; means for actuating the valve slides including a gear, a pinion meshing with the gear, a connecting rod eccentrically connected to the pinion, a shaft mechanically connected to the connecting rod and to the valve slides, means for causing the gear to make a partial revolution, and means for yieldingly holding the gear at the end of such partial revolution.

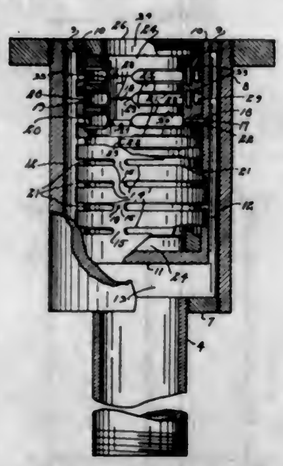
---



1,693,617. ELECTRIC MOTOR. ALFRED E. OSWALD, Hackensack, N. J., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 19, 1925. Serial No. 57,277. 31 Claims. (Cl. 172—276.)

1. In an electric motor, the combination of an armature, a commutator, a pair of main brushes, a pair of auxiliary brushes, each brush of a pair being between and fixed relatively to the brushes of the other pair, a field-structure embodying means capable of substantially limiting field distortion and displacement of the magnetic neutral plane relatively to said field-structure, said field-structure including a coil in series with said main brushes and also including a coil connected across said auxiliary brushes and controlling the magnetism of the first-mentioned coil whereby the speed of said motor may be controlled, and means for variously setting the relative positions of said field-structure and all of said brushes.

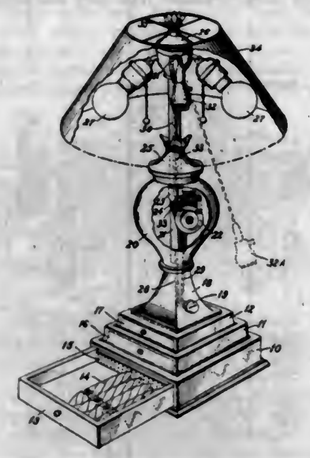
---



1,693,618. RADIATOR STRUCTURE. GERALD E. OTIS, Moline, Ill., assignor to The Herman Nelson Corporation, Moline, Ill., a Corporation of Illinois. Filed July 2, 1923. Serial No. 648,916. 2 Claims. (Cl. 257—139.)

2. In a radiator structure, the combination with a single hollow cast metal core having relatively large flat heating surfaces on opposite sides thereof; of heat-radiating plates of sheet metal mounted on said core, said plates having core-contacting elements and heat radiating elements forming a cellular structure adjacent the heating surfaces of said core; and a tie member for holding the plates on the core and maintaining the plates compressed to force said core-contacting elements thereof into intimate contact with the flat surfaces of the core.

---



1,693,619. NOISELESS CHECK VALVE. DENT SANDFORD, Toledo, Ohio. Filed May 26, 1923. Serial No. 641,562. 2 Claims. (Cl. 251—119.)

1. A compressor check valve embodying a chamber having an end opening, a concentric shell as a closure for the opposite end of the chamber and protruding thereinto, said shell having annular ports in series in communication with said chamber, there being bridge means between said ports provided with projections, a split ring within the shell for each annular port, said ring oppositely extending from said projections, abutting spacers for the rings engaging said projections, and pins staggered as to said projections for anchoring the spacers together.

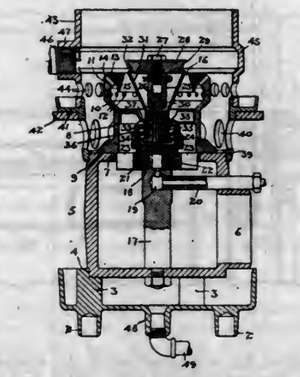
1,693,620. SMOKER'S LAMP. WULF SILVERMAN, New York, N. Y. Filed Mar. 10, 1927. Serial No. 174,148. 4 Claims. (Cl. 240—2.)

4. A smoker's lamp comprising a rectangular base with receptace drawers therein, a wire connector, an enclosing hollow body on said base, a wire reel therein, a lamp socket above said body and supported thereon, a cigar lighter supported by said body, a flexible wire connecting the reel and the lighter, a spring arranged to rotate the reel to draw said flexible wire into the structure, and wires inside of the structure interconnecting the wire connector, the flexible wire and the lamp socket.

---

1,693,621. SHEET-METAL PIPE. JOSEPH DONALD SMITH, St. Marys, Ontario, Canada, assignor of one-half to John K. Richardson, St. Marys, Ontario, Canada. Filed July 27, 1927. Serial No. 208,856. 5 Claims. (Cl. 126—309.)

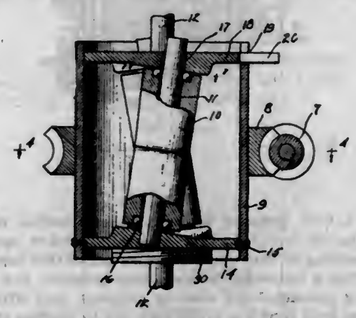
1. In a sheet metal pipe, a sheet of metal bent into cylindrical form and provided with seam forming edges, and having portions of the body of said sheet continuing beyond one of said edges and forming free integral lug extensions bent back over the other edge to secure the joint against separation.



---

1,693,622. GREETING-CARD STORING AND DISPLAYING HOLDER. CHARLES SPAULDING, Hingham, Mass., assignor to Spaulding-Moss Company, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 10, 1925. Serial No. 8,148. 3 Claims. (Cl. 206—44.)

2. A container for a stock of articles, said container comprising a box having a supporting shelf fixed within the box, and below the tops of the walls thereof, and arranged to permit access to stock articles below it, and to prevent accidental removal of said articles, and a cover constructed as a sample-exhibiting pocket loosely mounted on said shelf and freely movable to give access to a stock of articles below the shelf.

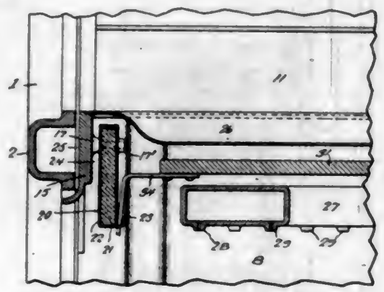


1,693,623. OIL BURNER. MOFFAT ST. CLAIR, Galt, Ontario, Canada, assignor of one-half to William S. Edwards, Toronto, Canada. Filed May 11, 1925. Serial No. 29,507. 5 Claims. (Cl. 158—77.)

1. An oil burner, comprising the combination with a combustion chamber of a centrifugal oil distributor, a rotary fan secured to said distributor below the same, a tubular casing encircling said oil distributor and terminating immediately below the level of the plane of the distributed oil and enclosing the rotary fan, a second tubular casing spaced from and encircling the aforesaid casing and extending beyond the discharge end of said oil distributor into the interior of said combustion chamber, means for supplying air under pressure to the interior of the inner casing, circumferentially spaced openings through the wall of said outer casing in a plane immediately below the plane of the distributed oil, admitting a restricted inflow of air from the interior of the combustion chamber into the interior of said outer casing, circumferentially spaced openings in the wall of said outer casing in a plane below the aforesaid openings and admitting a free flow of air from the combustion chamber interior, and means for supplying oil to said centrifugal oil distributor.

---

1,693,624. FRICTION SCREW-LIFTING MECHANISM. SIGURD STRUNGE, Wyandotte, Mich. Filed Apr. 17, 1926. Serial No. 102,645. 10 Claims. (Cl. 254—100.)

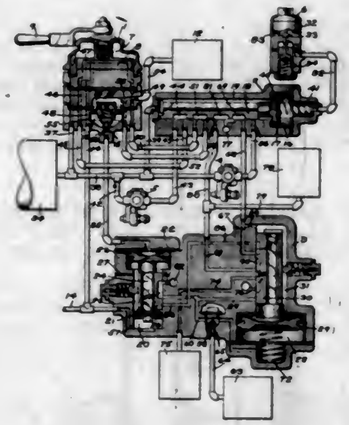


1. Lifting mechanism comprising a pole, a plurality of angularly arranged friction rollers engaging the periphery of the pole, a frame encircling the pole and carrying the rollers, and means for rotating the frame.

---

1,693,625. OVEN CONSTRUCTION. THOMAS E. TAYLOR, Mansfied, Ohio, assignor to The Tappan Stove Company, Mansfield, Ohio, a Corporation of Ohio. Filed Nov. 26, 1926. Serial No. 150,828. 26 Claims. (Cl. 126—39.)

1. An oven construction for gas ranges comprising a baking compartment and a broiling compartment, a burner

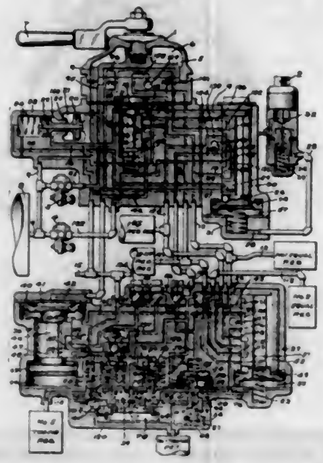


supported in said broiling compartment, a front strip extending across the front of said oven, a heat insulating

member carried by said front strip in spaced relation thereto and disposed between said burner and said front strip.

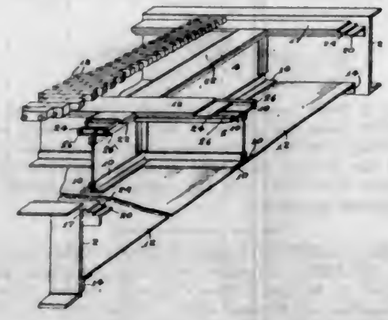
---

1,693,626. SPLIT REDUCTION DEVICE. THOMAS H. THOMAS, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Nov. 27, 1926. Serial No. 151,087. 7 Claims. (Cl. 303—18.)



1. In a fluid pressure brake, the combination with a brake pipe, of two reduction reservoirs, means operated upon a venting of fluid under pressure into either reservoir for effecting a reduction in brake pipe pressure, one reservoir being connected for venting purposes only after the venting of fluid from the brake pipe due to venting of fluid under pressure to the other reservoir has ceased.

---



1,693,627. FLUID-PRESSURE BRAKE. THOMAS H. THOMAS, Edgewood, and CLAUDE A. NELSON, Wilmerding, Pa., assignors to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Nov. 17, 1927. Serial No. 233,791. 16 Claims. (Cl. 303—18.)

2. The combination with a brake pipe, of means for effecting a reduction in brake pipe pressure in two stages including two equalizing reservoirs, means for venting fluid under pressure from said reservoirs to effect the first stage of reduction in brake pipe pressure and for venting fluid under pressure from only one of said reservoirs in effect the second stage of reduction in brake pipe pressure, valve means adapted to initially connect said reservoirs together, and means for effecting the operation of said valve means to disconnect said reservoirs.

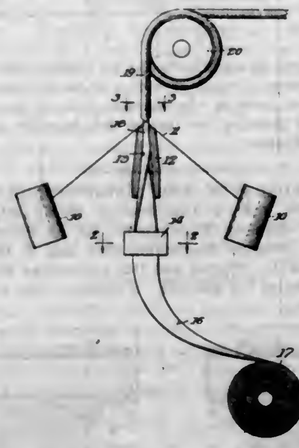
---

1,693,628. TRAVELING CHAIN GRATE. JOHN VAN BRUNT, Flushing, N. Y., assignor to Combustion Engineering Corporation, New York, N. Y., a Corporation of New York. Filed July 4, 1923. Serial No. 649,890. 1 Claim. (Cl. 110—40.)

A traveling grate having, in combination, a supporting structure for the upper run of the grate comprising a girder, a wearing plate upon which the upper run of the grate slides mounted upon said girder, and a layer of heat insulating material interposed between said wearing plate and girder, said wearing plate and girder being so constructed as to extend over the top and bottom sides and longitudinal edges of said layer of heat insulating material.

---

1,693,629. NONCLOGGING SPRAY NOZZLE. ALFRED L. WEBER, Winchester, Mass., assignor to E. B. Badger and Sons Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 23, 1922. Serial No. 583,680. 21 Claims. (Cl. 299—114.)

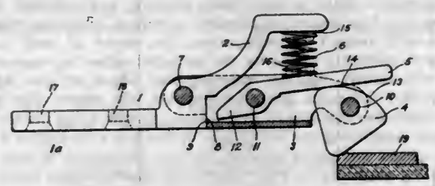


1. A spray nozzle comprising a hollow body of generally circular cross section in planes perpendicular to a longitudinal line, said body having a wall at one end, an outlet orifice adjacent to the opposite end, said orifice being substantially concentric with the body and of substantially larger area and dimensions than the aforementioned inlet, and a tangential inlet adjacent to the end in which said wall is located, the side walls of the body being of tapered formation convergently from the part in which the inlet is located toward the outlet orifice.

5. A non-clogging spray nozzle comprising a hollow body with an open unobstructed interior, having its interior surface of substantially conical form converging substantially from an end wall to a restricted zone surrounding an outlet orifice, and having an inlet passage arranged substantially tangentially of said body adjacent to said end wall, the latter and said interior surface being formed to cause the liquid entering the nozzle to flow around said interior surface in the form of a spiral hollow stream of decreasing thickness to said outlet.

---

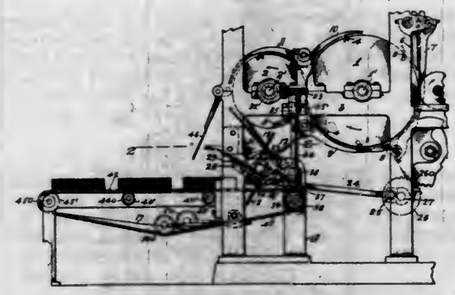
1,693,630. INSULATING TUBE AND PROCESS OF MAKING SAME. HUGO H. WERMINE, Chicago, Ill., assignor to Belden Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 15, 1922. Serial No. 553,286. 3 Claims. (Cl. 247—40.)



1. In a non-metallic conduit, the combination of an inner lining comprising a single strip of flexible insulating material coiled cross-wise of the length thereof, to form a cross-sectionally spiral, multi-walled tube, the edges of the strip being disposed lengthwise of the tube, and a braided cover over said tube for preventing uncoiling thereof.

---

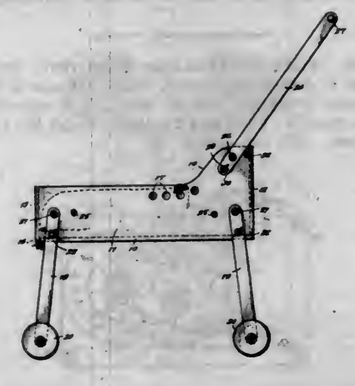
1,693,631. CONTROL APPARATUS. HAROLD W. WILLIAMS, East Pittsburgh, and DOUGLAS G. BOOZER, Pittsburgh, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 3, 1926. Serial No. 152,890. 9 Claims. (Cl. 200—166.)



1. A contact finger comprising a base member, a contact-carrying member pivotally mounted on said base member and carrying a contact tip pivotally mounted thereon, a lever pivotally mounted on said contact-carrying member

and resting on said contact tip and a spring adapted to force said lever against said contact tip and urge said contact-carrying member toward its normal position.

---

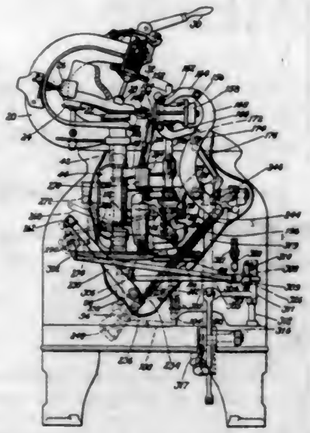


1,693,632. DELIVERY MECHANISM. ADOLPH M. ZUCKERMAN, New York, N. Y., assignor, by mesne assignments, to R. Hoe and Co., Inc., New York, N. Y., a Corporation of New York. Filed May 6, 1924. Serial No. 711,346. 13 Claims. (Cl. 93—93.)

1. In a pile or stack delivery, the combination of a traveling carrier, means for advancing the carrier, a collector having means for receiving products, means for delivering a number of products to the collector, and means for actuating the collector so that the product receiving means are lowered below the surface of the carrier to lay the collected products on the carrier in a pile.

---

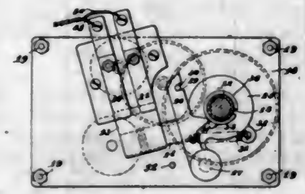
1,693,633. CONVERTIBLE GOCART AND CRIB. SARAH ROGERS ALLEN, Bethel, Conn. Filed Apr. 1, 1927. Serial No. 180,120. 2 Claims. (Cl. 280—31.)



1. In a convertible go-cart crib, a body portion having a base, longitudinal sides, and transverse head and foot

ends, front and rear leg-supports at each side having wheels at their lower ends disposed at their outer sides, and pivotally mounted at their upper ends outwardly of the longitudinal sides of said body portion, and adapted to be swung from extended relation to folded overlying relation with respect to each other, the wheel of each leg support partially overlying the adjacent other leg-support in said folded relation, whereby the wheel of one leg-support retains the other leg support, the upper edge of the lower leg-supports in said folded relation being parallel to and supporting the lower edge of the upper leg-supports; and means carried by each leg support for rigidly securing said leg supports in their respective extended and folded relation.

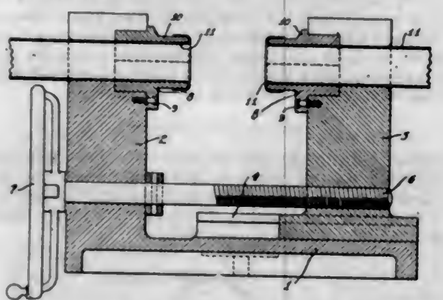
---



1,693,634. FINISHING MACHINE. WILLIAM RODERICK BARCLAY and FRANK BYCROFT KEALL, Leicester, England, assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 26, 1925, Serial No. 58,942, and in Great Britain Oct. 22, 1924. 23 Claims. (Cl. 12—17.)

1. A machine comprising mechanism for causing a plurality of relative traversing movements between a shoe treating tool and a shoe support to cause the tool to treat the same area of a shoe on the support more than once, means for operating the tool during a traversing movement, and means for controlling the character of the operation of the tool constructed and arranged to operate the tool in one fashion during one traversing movement and in a different way during another different traversing movement.

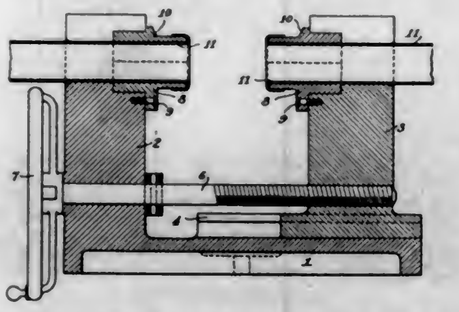
---



1,693,635. TIME-CONTROLLED ELECTRIC SWITCH. DANIEL L. CHANDLER, Boston, Mass., assignor to Champ Electrical Company, Boston, Mass., a Corporation of Massachusetts. Filed May 27, 1927. Serial No. 194,790. 9 Claims. (Cl. 200—39.)

2. A time controlled switch having a fixed switch member, a lever carrying a cooperating switch member, a rotary shaft, said lever being loosely mounted on said shaft, a locking lever pivoted at one end to said switch lever, a stationary member with which the other end of said locking lever is adapted to engage to lock the switch lever when the switch is closed, a spring which holds the locking lever in locking position, a cam carried by the shaft which during the rotation of the shaft in one direction engages the locking lever and releases the lock thereby allowing the spring to turn the switch lever in a direction to close the switch, a dial, a pointer carried by the shaft which indicates on the dial the length of time the shaft must turn in the reverse direction to open the switch and time controlled mechanism for rotating the shaft which is wound up by the turning of the shaft to set the pointer and which becomes operative to turn the shaft in a reverse direction and move the pointer when the shaft is left free to turn after the winding-up operation.

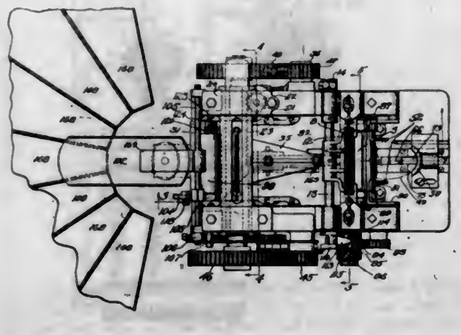
---



1,693,636. METHOD OF MAKING INNER TUBES. JOHN P. COE, Yonkers, N. Y., assignor to G & J Tire Company, Indianapolis, Ind., a Corporation of Indiana. Filed Aug. 4, 1926. Serial No. 126,971. 10 Claims. (Cl. 154—14.)

1. The method of manufacturing an endless tube which comprises forming a length of tubing of unvulcanized rubber composition, turning the opposite ends of the tubing outwardly, and pressing the turned ends together to unite the same by adhesion.

---



1,693,637. APPARATUS FOR MANUFACTURING INNER TUBES. JOHN P. COE, Detroit, Mich., assignor to G & J Tire Company, Indianapolis, Ind., a Corporation of Indiana. Original application filed Aug. 4, 1926, Serial No. 126,971. Divided and this application filed Apr. 10, 1928. Serial No. 268,869. 3 Claims. (Cl. 154—5.)

1. An apparatus for splicing hollow rubber articles into an endless form comprising means encircling each end of the hollow article and permitting portions of the open end of the article to be turned outwardly, and means for moving the first mentioned means together to join the ends of the hollow article in the form of an annular seam, said first mentioned means having relatively movable parts permitting removal of the endless article after seaming.

1,693,638. AUTOMATIC TOP-LIFT GRADING AND DISTRIBUTING MACHINE. LEANDER A. COGSWELL, Manchester, N. H., assignor to Lacene Manufacturing Company, Manchester, N. H., a Corporation of Maine. Filed Aug. 20, 1921. Serial No. 494,009. 52 Claims. (Cl. 209—88.)

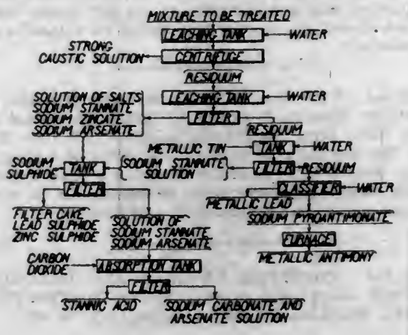
26. A blank sorting machine having, in combination means for measuring a blank, and spring-actuated means automatically responsive to said measuring means for causing the blank to be delivered in accordance with its measurement.

---

1,693,639. METHOD OF TREATING IMPURE LEAD AND LEAD ALLOYS. GEORGE E. DALBEY, East Berlin, and THOMAS P. HANFORD, Berlin, Conn., assignors to The Stanley Chemical Company, East Berlin, Conn., a Corporation of Connecticut. Filed Jan. 14, 1927. Serial No. 161,237. 1 Claim. (Cl. 75—15.)

The method of recovering valuable products from impure lead containing tin and antimony, which comprises treating the impure lead with a sodium-antimony salt and causing the antimony in said salt to be reduced to metallic antimony and the tin in the impure lead to replace the antimony in said salt, forming sodium stannate.

---



1,693,640. PROCESS FOR TREATING IMPURE LEAD. GEORGE E. DALBEY, East Berlin, and THOMAS P. HANFORD, Berlin, Conn., assignors to The Stanley Chemical Company, East Berlin, Conn., a Corporation of Connecticut. Filed May 4, 1926. Serial No. 106,726. 4 Claims. (Cl. 75—15.)

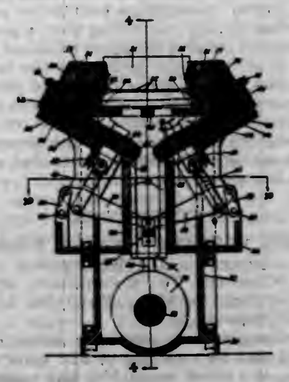
1. The process of treating impure lead for the removal of arsenic, tin, antimony and the like, which comprises bringing the metal in a molten condition under the influence of litharge and at the same time making gradual additions of a water solution of a caustic alkali and maintaining the whole at a temperature which will always allow the reacting materials on the surface of the molten metal to remain in a powdery or granular condition.

---

1,693,641. METHOD OF TREATING MIXTURES CONTAINING ALKALI SALTS OF CERTAIN METALS. GEORGE E. DALBEY, East Berlin, and THOMAS P. HANFORD, Berlin, Conn., assignors to The Stanley Chemical Company, East Berlin, Conn., a Corporation of Connecticut. Filed Jan. 14, 1927. Serial No. 161,238. 10 Claims. (Cl. 75—18.)

1. The method of treating mixtures containing sodium-metallic salts to recover valuable products, which comprises dissolving any caustic soda which may be present in the mixture and separating it from the undissolved materials, dissolving the metal salts other than sodium plumbate and plumbite and any sodium pyro antimonate that may be present due to the action of water on sodium

antimonate in the original mixture, separating such solution from the undissolved materials, treating the undissolved mixture of sodium plumbate and plumbite and sodium pyro antimonate to obtain metallic lead and sodium pyro antimonate, and treating said solumtion of metal salts to obtain stannic acid.



---

1,693,642. METHOD OF TREATING METALLIC PARTICLES. GEORGE E. DALBEY, East Berlin, and THOMAS P. HANFORD, Berlin, Conn., assignors to The Stanley Chemical Company, East Berlin, Conn., a Corporation of Connecticut. Filed Jan. 14, 1927. Serial No. 161,235. 3 Claims. (Cl. 75—15.)

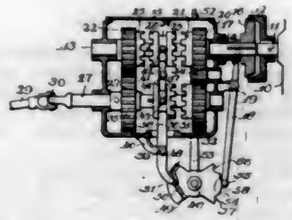
1. The method of treating metallic particles of lead alloys containing one or more of the metals tin, antimony, arsenic, which comprises subjecting the particles, at temperatures substantially below the fusing point thereof, to the influence of a water solution of an alkali metal in the presence of an oxidizing agent.

---

1,693,643. MACHINE FOR MAKING AUTOMOBILE DOORS. WALTER H. D'ARDENNE, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 27, 1921. Serial No. 496,067. 6 Claims. (Cl. 113—54.)

1. A machine of the class described comprising a frame, a bed removably secured thereto and constituting a fixed

die member, on which the door panels rest, and conforming to the contour of the door to be made, a plurality of removable die members movable along paths at acute angles to the plane of said bed, to clinch a flange on one of said panels over the edge of the other, said die members having working faces conforming to the contour of the edge portions of the door to be made, electro-magnetic means for holding said panels rigidly on the bed during the operation of said die members, and means for actuating said die members.



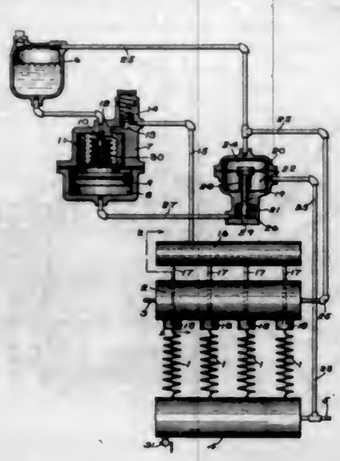
---

1,693,644. WET PROCESS FOR MANUFACTURING CEMENT. WERNER P. ECKDAHL, Chicago, Ill. Filed May 24, 1926. Serial No. 111,385. 3 Claims. (Cl. 106—25.5.)

3. The method of preventing the setting of a slurry of finely divided silicious material having a basic reaction, which comprises passing gases relatively high in carbon dioxide content into contact with said slurry.

---

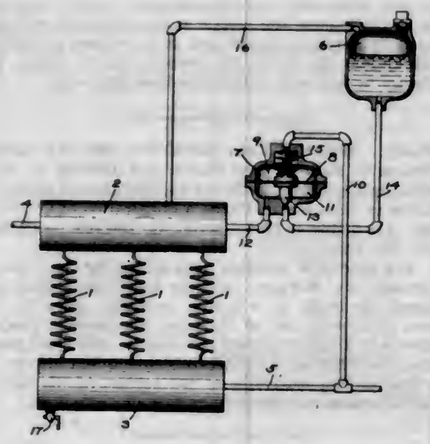
1,693,645. COMBINED REVERSE AND REDUCTION GEAR. EMERY H. FAHRNEY, Chicago, Ill. Filed Feb. 7, 1927. Serial No. 166,295. 4 Claims. (Cl. 74—59.)



1. In combination a driving shaft, a driven shaft, a forward drive connection between the shafts, clutch mechanism for controlling said connection, a reverse drive connection between said shafts, clutch mechanism for controlling the last recited connection, a lever device common to said clutch connections for controlling them, a power shaft, a clutch connection between the power shaft and said driving shaft, a lever device for controlling the last recited clutch connection, a single pivotally mounted cam element, said cam element having three distinct surfaces formed on different radii and operating upon the first recited lever device, a separate cam surface on the cam element operating upon the second recited lever device, and means for swinging the cam element about its pivot.

---

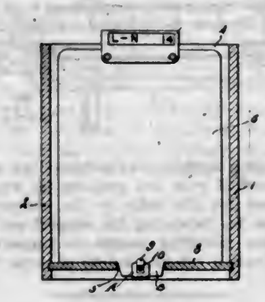
1,693,646. AIR PURIFIER. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Oct. 19, 1926. Serial No. 142,619. 5 Claims. (Cl. 303—88.)



3. The combination with separating means interposed in a stream of fluid for collecting oil and water contained in said stream, of a piston operated by fluid under pressure for forcing a liquid into said means for clearing said means of a collected oil and water, a valve operated by said piston for controlling the supply of liquid to said piston, a diaphragm subject to the opposing pressures of the fluid inlet and outlet of said separating means, and a double beat valve operated by said diaphragm and having one

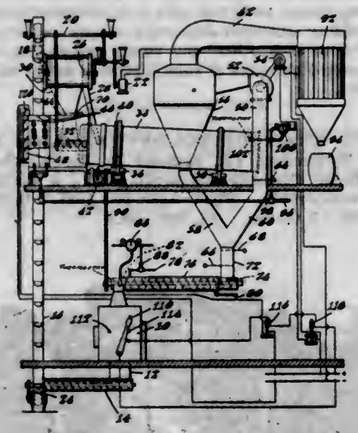
position for supplying fluid under pressure to said piston and another position in which said piston is connected to the atmosphere.

---



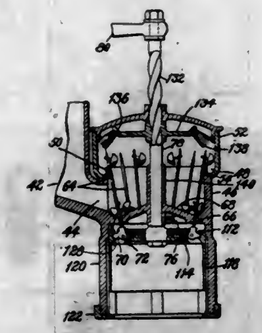
1,693,647. AIR PURIFIER. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Oct. 19, 1926. Serial No. 142,620. 4 Claims. (Cl. 303—88.)

1. The combination with a pipe coil interposed in a flow of fluid for separating oil and water from the flowing fluid, of means operated upon the clogging of said coil with oil and water for supplying a liquid to said separating means which acts by gravitational flow through said coil to clear same of the collected oil and water.



1,693,648. REENFORCING DEVICE FOR SIDES OF PERFORATIONS. LABURTON A. GALE, Belmont, Mass., assignor, by mesne assignments, to Remington Rand Inc., New York, N. Y., a Corporation of Delaware. Filed Oct. 28, 1924. Serial No. 746,332. 4 Claims. (Cl. 129—10.7.)

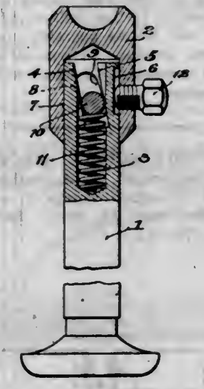
1. The combination with a sheet or card having a perforation adjacent a margin thereof, of a pair of elements on opposite sides of the sheet in the region of said perforation, and integral parts on one element for engaging the other, passing through the perforation and reenforcing the sheet surrounding the perforation and adjacent the margin.



---

1,693,649. METHOD OF AND APPARATUS FOR TREATING STARCH. HAROLD W. HARRIGAN, Medford, Mass., assignor to Hersey Manufacturing Company, South Boston, Mass., a Corporation of Massachusetts. Filed Nov. 5, 1927. Serial No. 231,297. 20 Claims. (Cl. 107—3.)

18. In combination, a machine for molding starch containing a source of starch supply and a source of used starch unfit for immediate reuse, a treating apparatus for progressively and continuously removing said unfit starch, drying it, cooling it and returning it to the molding machine, comprising apparatus for setting up a current of heated air, and means for rendering the control of said apparatus for producing the current of heated air dependent upon the control of the starch molding machine.

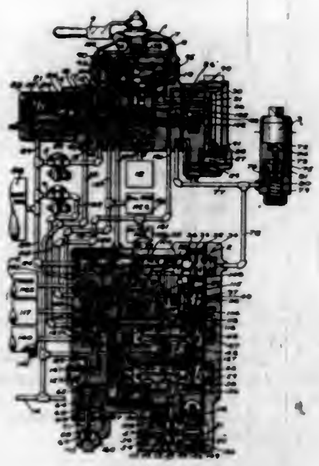


1,693,650. SUPPLYING APPARATUS. ALBERT LATHAM, deceased, Beverly, Mass., by James W. Nourbourn, Somerville, Mass., administrator, assignor to American Button & Fastener Co., Augusta, Me., a Corporation of Maine. Original application filed June 26, 1920, Serial No. 391,908. Divided and this application filed Aug. 4, 1925. Serial No. 48,084. 43 Claims. (Cl. 218—12.)

1. In a supply apparatus, a container for objects, a conveyor associated with the container, a carrier arranged to engage objects in the container and hold them independently of said container, means for moving the container and carrier relatively to deliver objects from the container and to free them from the carrier, and means movable into engagement with delivered objects to transfer them to the conveyor.

---

1,693,651. TAPPET FOR VALVES. RODNEY W. MANNING, Riverside, R. I. Filed Mar. 31, 1927. Serial No. 179,867. 12 Claims. (Cl. 123—90.)

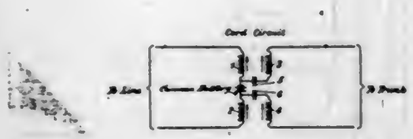


10. In a tappet, a pair of telescopic members, means disposed between said members to cause relative movement thereof away from each other, and means for holding the members against movement by said first named means while permitting the members to be moved toward each other by a force greater than that of the holding means.

---

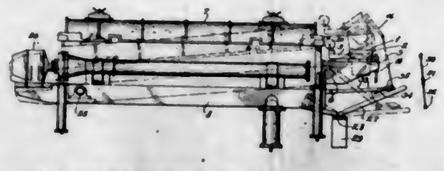
1,693,652. SPLIT-REDUCTION DEVICE. JOSEPH C. MCCUNE, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed June 23, 1927. Serial No. 200,858. 31 Claims. (Cl. 303—18.)

6. In a fluid pressure brake, the combination with a brake pipe, of an equalizing reservoir, a valve mechanism



subject to the opposing pressures of the equalizing reservoir and the brake pipe for venting fluid from the brake pipe, a first and a second reduction reservoir, means for first connecting the first reduction reservoir to said equalizing reservoir, a control valve device having a control portion and a regulating portion, a timing reservoir, another reservoir, a valve device for controlling the opera-

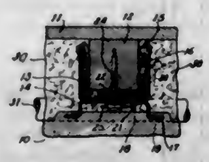
tion of said regulating portion to permit said control portion to operate to connect said timing reservoir and last mentioned reservoir to further reduce the pressure in said timing reservoir, and means operable upon the reduction in timing reservoir pressure for connecting said first and second reduction reservoirs to effect a second reduction in brake pipe pressure.



---

1,693,653. BATTERY SUPPLY CIRCUIT. FREDERICK W. MCKOWN, Englewood, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 13, 1927. Serial No. 219,353. 1 Claim. (Cl. 179—41.)

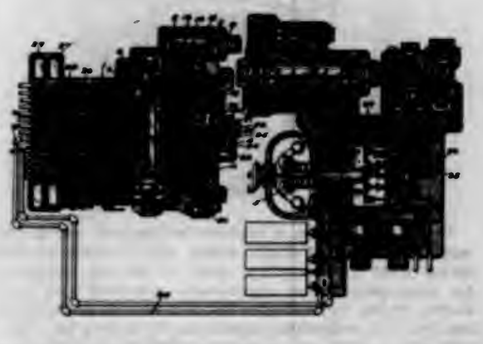
In a battery supply circuit designed to be connected at one end to a loop and at the other end to a trunk, a split repeating coil having a pair of windings directly connected to the loop side thereof and a pair of windings directly connected to the trunk side thereof, a battery so connected in the circuit as to be between the two windings of each of said pairs of windings, and two condensers connected one between each winding directly connected to the trunk and said battery.



1,693,654. CENTRIFUGAL CASTING MACHINE (WEIGHING MECHANISM). WILLIAM D. MOORE and WALTER MORGAN, Birmingham, Ala., assignors to Sand Spun Patents Corporation, New York, N. Y., a Corporation of Delaware. Filed Oct. 7, 1927. Serial No. 224,636. 9 Claims. (Cl. 22—65.)

1. In a casting machine, the combination with a ladle of means connected with the machine for supporting the ladle, a support for the ladle on the connecting means, and mechanism for balancing the support on said means, said mechanism including means to support additional weights to balance a selected weight of metal in the ladle.

---

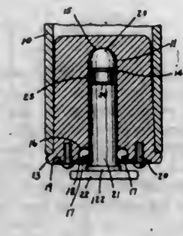


1,693,655. FLOOR CONSTRUCTION. EVERETT N. MURPHY, Chicago, Ill., assignor to Stevens Partition & Floor Deadener Co., Chicago, Ill., a Corporation of Illinois. Filed July 17, 1924. Serial No. 726,472. Renewed Mar. 26, 1928. 9 Claims. (Cl. 20—6.)

8. In a building floor construction, the combination with lower and upper floors and sound insulating means for supporting the upper floor on the lower floor, of means for anchoring said upper floor to said lower floor, said anchoring means being the only non-cushioned connection and including connected elements normally out of physical contact with each other, and means functioning to hold the connected elements of said anchoring means in proper alignment.

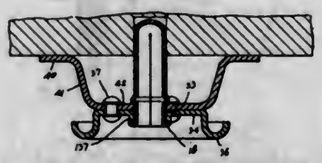
---

1,693,656. TRAIN-CONTROL DEVICE. CLAUDE A. NELSON, Wilmerding, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Apr. 20, 1927. Serial No. 185,160. 7 Claims. (Cl. 303—18.)



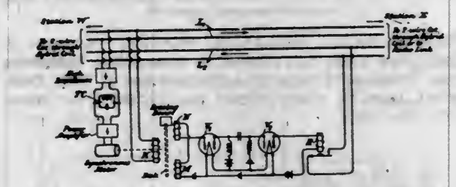
5. In a train control apparatus, the combination with means for effecting an application of the brakes in two stages, of a valve device operated by variations in fluid pressure for either rendering said means effective or ineffective to cause an application of the brakes in two stages, a speed governor controlled by the speed of the train, a valve operated by said governor when the speed of the train is above a predetermined speed limit for venting fluid from said valve device and when the speed is below a predetermined speed limit for preventing the venting of fluid from said valve device, and means operated when the brakes are applied for supplying fluid under pressure to said valve device.

---



1,693,657. BALL-BEARING SOCKET AND FRICTION BAND STEM. WILLIAM H. NOELTING, Evansville, Ind., assignor to Faultless Caster Company, Evansville, Ind., a Corporation. Filed May 2, 1925. Serial No. 27,415. 5 Claims. (Cl. 16—21.)

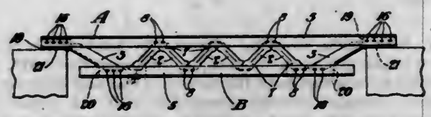
1. A caster and socket for legs including a leg supporting body adapted for relatively permanent mounting upon a leg and having a cylindrical opening therein, a lateral series of anti-friction elements coaxial with said opening, an apertured retainer for said anti-friction elements secured to the body, a caster including a cylindrical stem receivable by the retainer aperture and body opening and laterally engageable by the anti-friction elements and detachably associated with the body, and an annular resilient member carried by the stem and frictionally and peripherally engaging the adjacent wall for retaining the stem in the opening but permitting forcible detachment.



---

1,693,658. COMBINATION PLATE-CASTER SOCKET AND SLIDE. WILLIAM H. NOELTING, Evansville, Ind., assignor to Faultless Caster Company, Evansville, Ind., a Corporation. Filed Mar. 14, 1927. Serial No. 175,206. 5 Claims. (Cl. 16—42.)

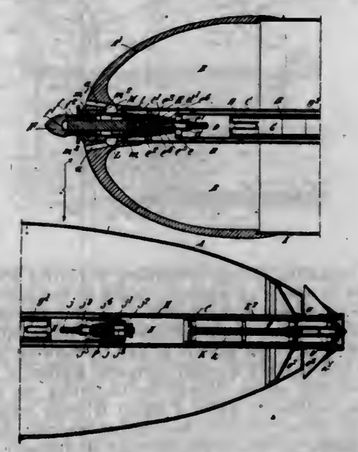
1. In a caster socket, the combination of a load sustaining plate portion, a slide portion rigidly connected thereto and supported by the plate portion for supporting a load, and a socket tube for detachably receiving a caster stem and having a pair of spaced flanges adjacent its lower end, said slide portion being apertured for tube reception and clampingly mounted thereon between said flanges for tube support.



1,693,659. ECHO SUPPRESSOR. HARRY NYQUIST, Millburn, and KENNETH W. PFLEGER, Arlington, N. J., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 11, 1927. Serial No. 225,570. 7 Claims. (Cl. 178—44.)

3. In association with two telephone lines adapted for transmission in opposite directions, controlling means responsive to currents in one of said lines, switching means controlled thereby for disabling the opposite line, and means for balancing out in the input of said controlling means waves of a given frequency or its harmonics.

---

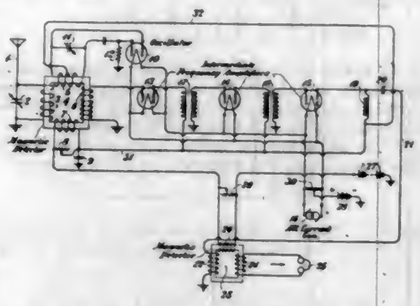


1,693,660. TRUSS. NORMAN B. OBBARD, Pittsburgh, Pa. Filed Dec. 12, 1927. Serial No. 239,421. 8 Claims. (Cl. 189—37.)

1. A truss structure composed of top and bottom chord members, each of said chord members being composed of a pair of rolled angle shapes arranged in spaced relation back to back, a plurality of diagonal lacing members connecting said upper and lower chord members, said lacing members having their ends projecting into the space between the rolled shapes forming said chord members, said shapes being provided with spaced apertures in their backs, and integral tongues on said lacing members adapted to project through said apertures to lock said chord members and lacing members together.

---

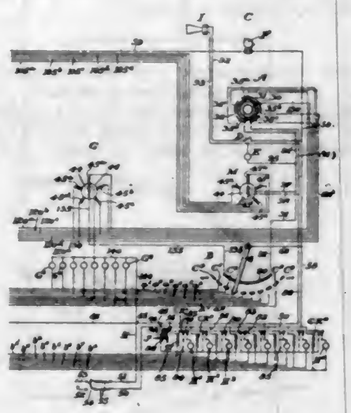
1,693,661. PERCUSSION AND HYDROSTATIC FUSE. AMOS OGDEN, Barrow-in-Furness, England, assignor to Vickers Limited, Westminster, England, a British Company. Filed July 7, 1926, Serial No. 120,924, and in Great Britain Nov. 26, 1925. 16 Claims. (Cl. 102—2.)



1. In a bomb, impact firing mechanism adapted to be fired on striking the obstacle, means whereby the bomb is

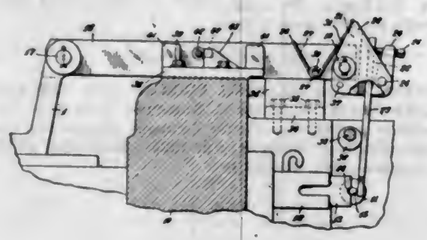
prevented from exploding on striking a solid obstacle offering a relatively small resistance, which means are rendered inoperative upon such obstacle being struck, and means whereby the bomb is then exploded upon meeting a further obstacle.

---



1,693,662. RADIO SIGNALING SYSTEM. RUSSELL S. OHL, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed June 25, 1924. Serial No. 722,367. 9 Claims. (Cl. 250—20.)

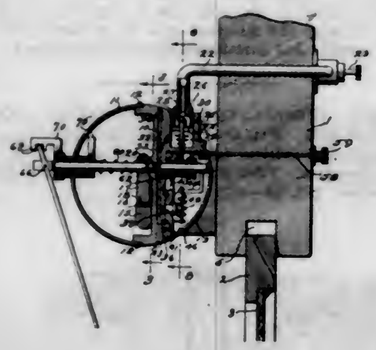
1. In a radio receiving system, the combination with an antenna of a magnetic detector connected therewith, an amplifier connected with the output of the said detector, a second magnetic detector connected with the output of the said amplifier, and a signal receiving instrument connected with the said second detector.



---

1,693,663. SIGNALING SYSTEM AND MECHANISM. LLOYD E. ONEAL, East Orange, N. J., and SAMUEL N. MEAD, Jr., Brooklyn, N. Y., assignors to Chas. Cory & Son, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 13, 1923. Serial No. 674,490. 3 Claims. (Cl. 177—353.)

1. A signaling system comprising a control station, a plurality of operating stations, means at the control station for selectively connecting the operating stations with the control station, means for selectively transmitting different definite visual signals to and fro between the control station and the selected operating station, a general signal station, means thereat for indicating the selected operating station to which a signal is being transmitted from the control station, and means whereby the indicating means is selectively operated in response to the selecting operation of the central station selective connecting means.



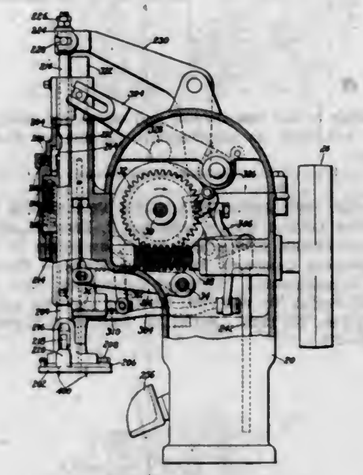
1,693,664. TRANSFER MECHANISM FOR UPSETTING MACHINES. CLIFFORD O. PETITJEAN, Waterbury, Conn., assignor to The Waterbury Farrel Foundry and Machine Company, Waterbury, Conn., a Corporation of Connecticut. Filed May 7, 1926. Serial No. 107,383. 8 Claims. (Cl. 10—25.)

1. In mechanism of the character described; a carrier bar pivotally connected with a reciprocating part; a finger having a yielding connection with the bar; means for rocking the bar upon its pivot mounting during its movement in one direction; and means associated with the first named means for varying the timing of the rocking movement of the carrier bar to permit the finger to pass over the blank after its delivery to the operating tools.

---

1,693,665. WINDSHIELD CLEANER. JOHN X. PHILLIPS, Jr., Washington, D. C., assignor, by mesne assignments, to Trico Products Corporation, Buffalo, N. Y., a Corporation of New York. Original application filed June 30, 1923. Serial No. 648,818. Divided and this application filed Aug. 5, 1925. Serial No. 48,419. 18 Claims. (Cl. 15—253.)

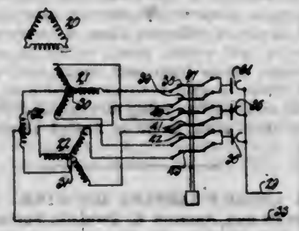
1. In a windshield cleaner, a motor, a cleaner arm connected to said motor to be operated thereby, said motor embodying means for defining a normal stroke to said cleaner arm short of the full extent of movement to which said motor is capable of moving said arm, means for moving said cleaner arm outwardly from wiping contact with the windshield glass when the motor moves said cleaner arm beyond its normal stroke, and a manually operated means for rendering said first means inoperative whereby the motor may move the cleaner arm beyond its normal stroke.



1,693,666. FINELY-DIVIDED PHENOLPHTHALEIN AND PROCESS OF MAKING SAME. EARL B. PUTT, New York, N. Y. Filed May 11, 1926. Serial No. 108,418. 10 Claims. (Cl. 260—65.))

1. A finely divided phenolphthalein made up of unground particles less than 10 microns in diameter.

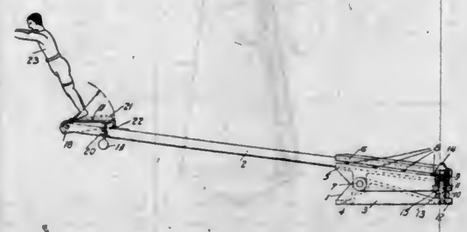
---



1,693,667. MACHINE FOR OPERATING ON SHOES. ARTHUR F. PYM, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 3, 1921. Serial No. 474,701. 49 Claims. (Cl. 1—19.)

1. A machine for operating on shoes comprising, in combination, means for smoothing the lining against the inside counter portion of a shoe and placing a shank piece in the shoe over the margin of the lining, and means to secure the shank piece in place.

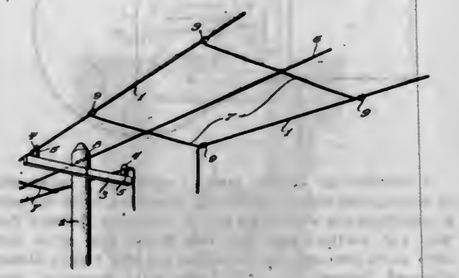
---



1,693,668. RECTIFICATION OF ALTERNATING CURRENT. ERNEST YEOMAN ROBINSON, Lymm, England, assignor, by mesne assignments, to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 23, 1925, Serial No. 38,959, and in Great Britain June 24, 1924. 6 Claims. (Cl. 175—363.)

1. A polyphase alternating current rectifying system employing asymmetrically conducting devices including a commutator for disconnecting each one of said devices from its corresponding phase during the period of the alternating current cycle when it is non-conducting as regards said phase and for reconnecting it to another phase during said non-conducting period.

---

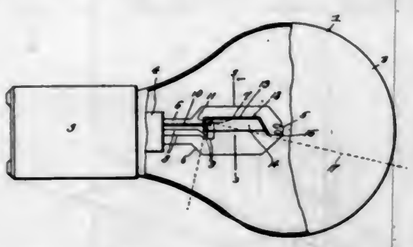


1,693,669. DIVING APPARATUS FOR SWIMMING POOLS. GABRIEL E. ROHMER, New York, N. Y. Filed Feb. 5, 1926. Serial No. 86,360. 8 Claims. (Cl. 272—66.)

1. A diving apparatus comprising a base, a board pivoted intermediate its ends to said base, anchoring means holding the board to the base at a point opposite the diving end and cushioning means at said anchored end.

---

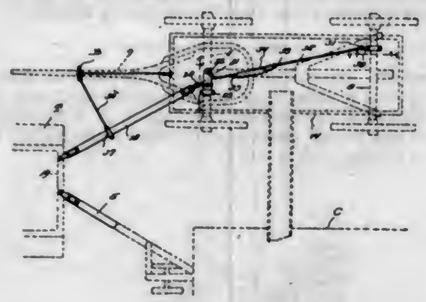
1,693,670. ELECTRIC-WIRE SUPPORT. CARMELO SALESAS, Guantanamo, Cuba. Filed Feb. 15, 1926. Serial No. 88,400. 1 Claim. (Cl. 173—251.)



A support including a standard, a cross arm carried by said standard, and insulators carried by and projecting from the cross arm at opposite sides of the standard, line conductor wires spaced transversely from each other and connected with said insulators, a dead supporting wire extending between said conductor wires in spaced parallel relation thereto and supported from said standard above said cross arm, opposed insulators carried by said conductor wires and spaced longitudinally thereof, and cross wires extending between said conductor wires with their intermediate portions secured to the supporting wire and their ends secured about the insulators carried by the conductor wires.

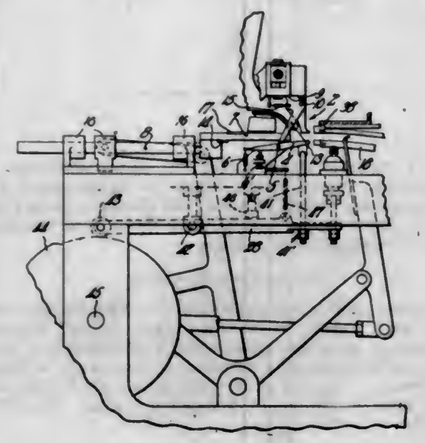
1,693,671. PORTABLE LIQUID FIRE-EXTINGUISHER. KARL SCHMIDT, Neuroppin, Germany. Filed July 8, 1927, Serial No. 204,313, and in Germany Apr. 24, 1926. 2 Claims. (Cl. 299—95.)

1. In a portable liquid fire-extinguisher having pipes adapted to put the inner air space in communication with the air space of the discharge pipe and leading into a chamber located near the bottom of said extinguisher, pipes of larger diameter joined to said chamber and of smaller diameter opening into said air spaces.



1,693,672. ELECTRIC LIGHT. CHARLES J. SCHROEDER, Minonk, Ill. Filed Nov. 22, 1926. Serial No. 150,061. 1 Claim. (Cl. 176—26.)

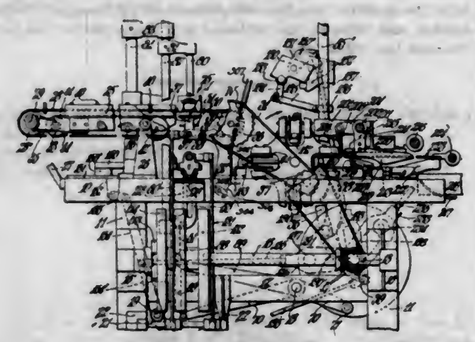
A reflector for electric lamps comprising a substantially rectangular shaped relatively elongated cover including a longitudinally extending top, a forwardly inclined front wall and vertical rear and side walls, said cover being open at its side opposite from said top and a light filament disposed therewithin, said front wall extending downwardly beyond the edges of the side walls and constituting a light deflector for the filament whereby to direct the rays thereof at an inclined angle from the horizontal plane thereof.



1,693,673. WAGON-TRACTOR HITCH. JUST H. SETHER, Jackson, Minn. Filed Dec. 17, 1927. Serial No. 240,871. 2 Claims. (Cl. 280—33.44.)

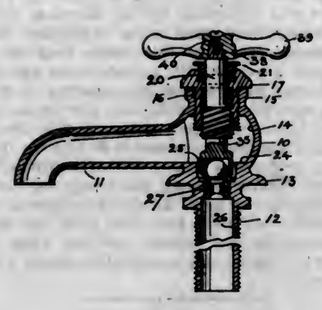
1. A hitch structure of the class described comprising a bracket including means whereby it may be attached to the rear axle of a wagon at one side thereof, a second bracket including means whereby it may be attached to the other side of the front axle of the wagon, a sheave in the second bracket, a draw rod engaged with the first bracket and projecting forwardly, a chain trained over the sheave and engaged with the draw bar, means for adjusting the length of the chain, a draw bar engaged with the chain and adapted to be engaged with the draw bar of a tractor, a brace rod engaged with the draw bar first mentioned and

extending to the side thereof and means for engaging the brace rod with an intermediate portion of the wagon tongue.



1,693,674. WRAPPING MACHINE FOR STICK CANDY. ELMER LOVELL SMITH, ARTHUR E. PHELON, and PAUL LANGHAMMER, Springfield, Mass., assignors to Package Machinery Company, Springfield, Mass., a Corporation of Massachusetts. Original application filed Sept. 4, 1923, Serial No. 660,798. Divided and this application filed Feb. 13, 1926. Serial No. 88,021. 6 Claims. (Cl. 226—2.)

1. In a machine of the class described comprising in combination, a downwardly directed spout for delivering sticks of candy of different sizes, a receiver therebelow for receiving said sticks, means acting in said spout to release single sticks from said spout, and a pusher for removing sticks on said receiver operable to actuate said means, the said receiver being movable and arranged to be depressed by a stick as it is moved thereover by the pusher.

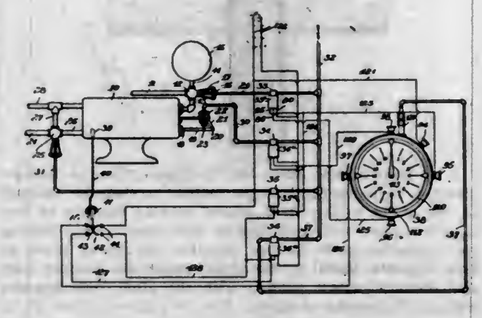


1,693,675. SOAP-WRAPPING MACHINE. ELMER LOVELL SMITH and ARTHUR E. PHELON, Springfield, Mass., assignors to Package Machinery Company, Springfield, Mass., a Corporation of Massachusetts. Filed Sept. 4, 1923. Serial No. 660,719. 23 Claims. (C. 93—2.)

1. In a wrapping machine in combination, means for folding a cardboard blank into a box-like carton about an article of different shape than said box like carton comprising, a folding die, means for positioning said blank and article in superposed relation above said die, co-

operating upper and lower plungers for carrying the blank and article through die, the upper plunger having depending portions for engaging said blank, and a spring pressed plate for engaging said article.

1,693,676. BALL-JOINT FAUCET. MICHAEL B. SPINELLE, Chicago, Ill., assignor of one-half to Joseph F. Carson, Chicago, Ill. Filed Jan. 13, 1928. Serial No. 246,513. 2 Claims. (Cl. 251—159.)

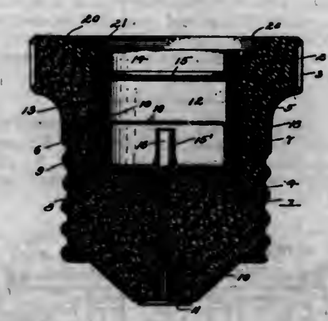


1. In a valve construction the combination with a housing having a valve seat; of a cap threaded in the housing, a two-piece valve member comprising a stem and a ball loosely secured therein, said stem being axially movable in the cap to seat the valve ball, a packing box in the cap, a packing element and a gland adapted to press the packing element around the valve stem; said valve seat including an annular member threaded in the housing and provided with a cross-shaped aperture forming a fluid passage therethrough.

1,693,677. PROCESS-CONTROL SYSTEM. LEWIS B. SWIFT, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Jan. 31, 1924. Serial No. 689,828. 6 Claims. (Cl. 62—2.)

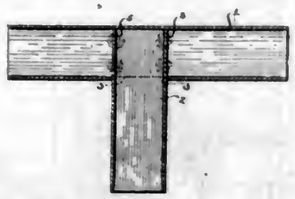
1. In apparatus of the character described, the combination with a treater vessel having an inlet, an outlet and a conduit for passing a fluid medium through the vessel to effect a heat exchange with the contents thereof, of separate means for controlling the flow of material through the inlet, the outlet and the said conduit respectively, means for automatically actuating the said con-

trolling means to effect the admission, the treatment and the discharge of the material in orderly sequence, including motor mechanism, means operative at a predetermined



point of the cycle of operation to make the motor means ineffective and means responsive to changes of conditions in the treater vessel for making the motor means effective.

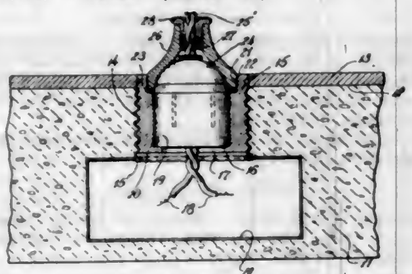
1,693,678. DRAINPIPE-CLEANING COMPOSITION. EDWARD A. TAYLOR, Cleveland, Ohio, assignor to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 27, 1925. Serial No. 26,294. 3 Claims. (Cl. 87—5.)



2. A drain-pipe cleaning composition comprising caustic alkali, finely divided aluminum and goulac.

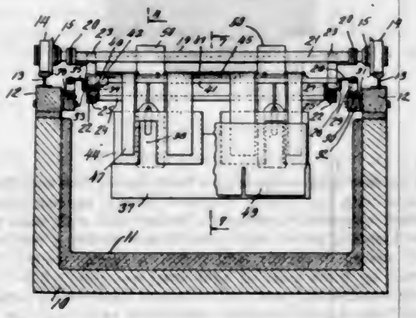
1,693,679. FUSE PLUG. MERRILL H. TERRY, Columbus, Ohio. Filed Oct. 21, 1926. Serial No. 143,255. 4 Claims. (Cl. 200—130.)

1. A fuse plug comprising a body having one end thereof formed with an axially disposed socket, spaced resilient contact members mounted in connection with said body and extending in the inner part of said socket, a removable shell formed to occupy said socket, a fusible contact strip carried by inner part of said shell and adapted for frictional engagement with said contact members, a substantially transparent closure carried by outer end of said shell and guide means for retaining said shell in a predetermined position within said socket.



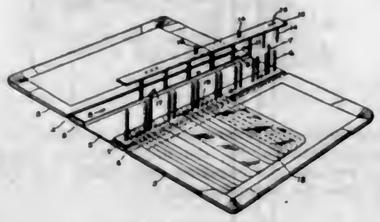
1,693,680. JOINT FOR TUBULAR STRUCTURES. MARTIN THUM, Rochester, N. Y. Filed Apr. 11, 1927. Serial No. 182,873. 2 Claims. (Cl. 287—54.)

1. A joint of the class described comprising a tubular member of rectangular cross section having an opening in one of its walls, and a second tubular member of rectangular cross section fitting in said opening and having two opposite walls thereof abutting the inner faces of two opposite walls of the first mentioned member and spot welded thereto in line with the other two opposite walls of the second member.



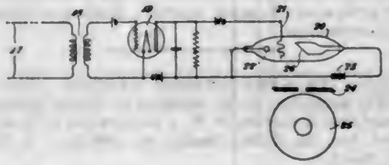
1,693,681. [WITHDRAWN.]

1,693,682. UNDER-FLOOR DUCT SYSTEM. HERVEY S. WALKER, Ardmore, Pa. Filed Aug. 26, 1926. Serial No. 131,574. 7 Claims. (Cl. 247—3.)



1. In an under floor wiring system, the combination of ducts within the floor below the surface thereof, outlet fittings mounted in the duct wall and extending to the floor surface, similar wiring receptacles mounted in certain of the outlet fittings and connected to electric service conductors in the duct, and a plug connectible to a device requiring current and adapted to be received interchangeably in the several receptacles.

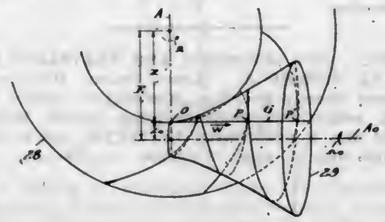
1,693,683. APPARATUS FOR ELECTRODEPOSITION. ELMER M. WANAMAKER, New York, N. Y., assignor to Anaconda Sales Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 19, 1926. Serial No. 130,136. 14 Claims. (Cl. 204—5.)



1. In apparatus for eletrodeposition, the combination of an electrolytic cell, a positive and a negative bus bar disposed adjacent the cell, a frame movable along the cell and carrying a plurality of anodes and cathodes, a pair of shoes carried by the frame and contacting with the positive and negative bus bars respectively, and electrical connections between the anodes and the shoe contacting with the positive bus bar maintained by the weight of the anodes, and between the cathodes and the negative bus bar through the other shoe.

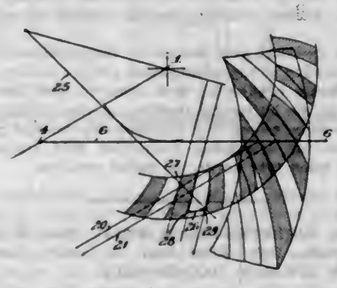
1,693,684. LOOSE-LEAF BINDER. WILLIAM F. WARNER, Jr., Rochester, N. Y., assignor to Henry Conolly Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Nov. 29, 1926. Serial No. 151,282. 3 Claims. (Cl. 129—8.)

1. A loose leaf binder comprising two binding members, one provided with a locking device and the other having a plurality of impaling projections arranged in groups, at least two of said projections having shoulders thereon for engagement with the locking means of the first mentioned binding member, leaves of less length than the binding members, each provided with a plurality of equi-distantly spaced openings along one margin adapted to fit on the impaling projections in overlapping relation so that one may project beyond the other, and a transfer member having impaling projections arranged to lie between the groups of impaling projections on the second mentioned binding member, the distance between the groups on the binding member being greater than the distance between adjacent members in any one group and being such that the impaling projections on the transfer member, while lying in openings of the leaves, may be moved to occupy a plurality of positions.



1,693,685. METHOD AND APPARATUS FOR TRANSMISSION OF PICTURES. ALLAN WEAVER, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 15, 1923. Serial No. 681,002. 10 Claims. (Cl. 178—7.)

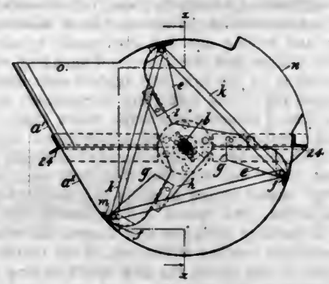
5. An X-ray tube, a picture receiving film on which the X-rays fall, means to move the film, and means to modify the X-rays in accordance with a received picture transmitting modulated carrier current.



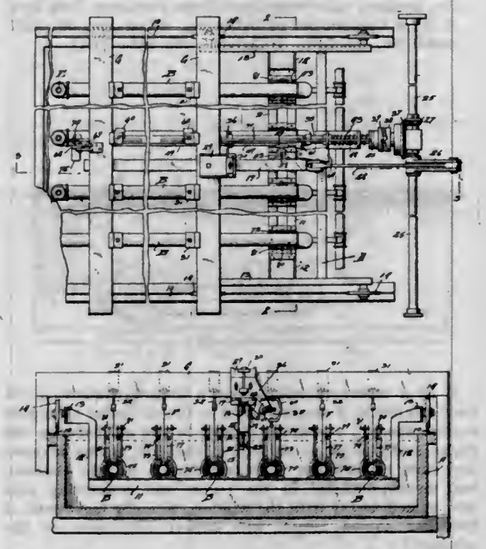
1,693,686. METHOD OF PRODUCING CURVED TOOTH GEARING. ERNEST WILDHABER, Rochester, N. Y., assignor to Gleason Works, Rochester, N. Y., a Corporation of New York. Filed Nov. 8, 1924. Serial No. 748,572. 29 Claims. (Cl. 90—4.)

1. The method of cutting a gear blank consisting in employing a cutter having a uniform pitch along a line in a plane offset from its axis and inclined to the projection of its axis in said plane, and in rotating said cutter in engagement with the blank.

29. The method of cutting a pair of gears which consists in cutting one member of the pair by rotating the hob in engagement with a continuously rotating gear blank while maintaining a fixed angular relation between the hob and blank axes, so that in finish cutting position the hob sweeps out the whole finished tooth surface of the blank, and in cutting the other member of the pair by rotating a hob in engagement with a continuously rotating gear blank while imparting a relative rolling motion between the hob and blank as of a gear rolling on the first gear.



1,693,687. METHOD OF PRODUCING GEARS. ERNEST WILDHABER, Rochester, N. Y., assignor to Gleason Works, Rochester, N. Y., a Corporation of New York. Filed Dec. 30, 1924. Serial No. 758,861. 27 Claims. (Cl. 90—4.)

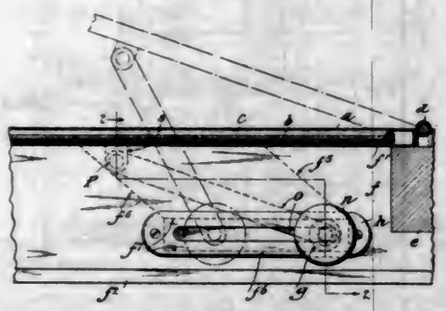


1. The method of cutting gears which consists in selecting a taper hob of changing lead, the sine of whose cone angle is in the same proportion to sine of the cone angle of the blanks as the number of its threads bears to the number of teeth on the gear to be cut and in rotating the hob and blank in timed relation while imparting an additional relative movement between the hob and blank about the apex of the latter.

1,693,688. MIXING MACHINE. LIONEL JAMES BAKER BLAKE, Bishops Stortford, England. Filed Sept. 24, 1926, Serial No. 137,579, and in Great Britain Nov. 7, 1925. 4 Claims. (Cl. 83—73.)

1. A mixing machine for concrete, tarmacadam and the like comprising a normally stationary mixing drum provided with charging and discharging orifices, a shaft on which said drum is mounted, a plurality of mixing scoops carried on said shaft within said drum and means for imparting a continuous rotation to said shaft whereby said scoops are successively elevated, the forward edges of said scoops extending practically the entire length of the interior of said drum and the rear edges thereof being of lesser length than said forward edges and situated away from said shaft, inclined ends connecting said forward and rear edges of said scoops, and means for tilting said drum to discharge the mixed material.

1,693,689. AUTOMATICALLY ACTUATED BRUSH FOR GRAINER PIPES. THORVALD C. COLBIORNSEN, Antonito, Colo. Filed Sept. 7, 1927. Serial No. 218,069. 18 Claims. (Cl. 159—37.)

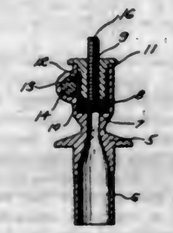


1. The combination with a pipe, of a cleaning means mounted upon the pipe and operating thereon, means for causing the cleaning means to reciprocate longitudinally of the pipe, the length of the reciprocation being relatively short and means to intermittently advance the cleaning means step by step along the pipe with respect to said reciprocating means for the full length of the pipe.

15. The combination with parallel steam pipes, and overhead transversely extending beams having hangers supporting the steam pipes, of means for cleaning the pipes comprising a longitudinally extending T-shaped rack bar mounted in guides operatively supported upon said beams, the depending web of the bar being provided with notches at intervals, a power driven crank shaft having a crank operatively connected to the bar to constantly reciprocate the bar, a carriage extending beneath the series of pipes, a plurality of pipe brushes mounted upon said carriage, each for engagement with a pipe, a column extending upward from the carriage and having a slot

receiving the depending web of the bar, a bolt mounted within the column and resiliently urged into engagement with the web of the bar, a longitudinally extending shaft having a longitudinally extending cam trip mounted thereon and extending radially therefrom, a lever mounted upon the column and having one end engageable by said strip as the shaft rotates and the other end engaging with the bolt, a movement of the cam trip against said lever causing the retraction of the bolt from engagement with the bar, a gear wheel mounted upon the crank shaft, a gear wheel loosely mounted upon the longitudinal shaft and having a clutch member, a clutch member slidingly mounted upon the shaft but rotating therewith and coacting with the first named clutch member and resiliently urged toward the latter, and means for retracting the second named clutch member from the first named clutch member when the carriage reaches either end of its travel at the opposite ends of the pipes, the cam shaft having a rotation approximately one-half the speed of rotation of the crank shaft and each clutch face having clutch teeth disposed in quartering relation, said retracting means including levers supported in the path of travel of said column, and a connecting rod engaging said levers and operatively connected to the slidable clutch member.

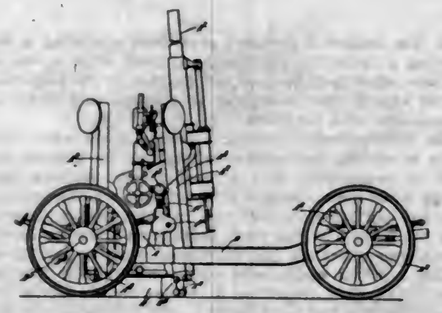
---



1,693,690. MOTOR-VEHICLE BUS-WINDOW-OPERATING MECHANISM. LEWIS L. CORCORAN, Allentown, Pa., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 30, 1927. Serial No. 187,740. 3 Claims. (Cl 268—118.)

1. In a motor vehicle having a hinged window, a sill for the window, a recess formed in the sill below the upper surface thereof, a channel formed in the sill between the recess and the upper surface of the sill, means to open and close the window slidably mounted in said channel, and means disposed in the recess and connecting said first named means with the window, whereby movement of the first named means will impart movement to the window.

---

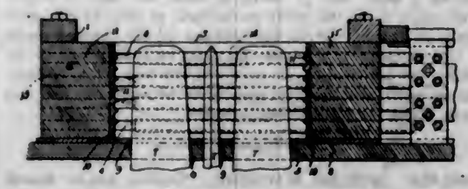


1,693,691. BALL COCK. LEO R. DAVIDSON and HENRY F. RAHL, Sturgis, Mich. Filed July 29, 1927. Serial No. 209,305. 2 Claims. (Cl. 137—104.)

1. A valve of the class described including a movable member, having a threaded bore, a threaded shank disposed within the bore and having a head carrying a washer, a body portion and a valve seat within the body portion against which the washer moves, said shank having a slot at its upper end to receive a screw driver for adjusting the threaded shank with respect to the movable member to adjust the valve and means for actuating said movable member.

---

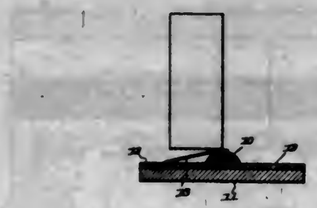
1,693,692. GUN MOUNTING AND TRAVELING CARRIAGE THEREFOR. ARTHUR TREVOR DAWSON and GEORGE THOMAS BUCKHAM, Westminster, London, England, assignors to Vickers Limited, London, England. Filed Aug. 9, 1927, Serial No. 211,735, and in Great Britain Aug. 31, 1926. 8 Claims. (Cl. 89—40.)



1. A gun mounting provided at approximately the centre of gravity of the mounting as a whole with means for engaging lifting means on a traveling carriage so that after the mounting has been lifted a small distance from the ground it can be angularly displaced about its approximate centre of gravity into the transporting position on the traveling carriage without further lifting or manipulation.

8. In a pedestal gun mounting, the combination of a base, a plurality of supporting arms pivoted thereto, means for detachably connecting said arms to said base when they are in the horizontal position, means which permits said arms to be raised to a substantially vertical position, and means for detachably connecting said arms to the mounting when they are in the raised position.

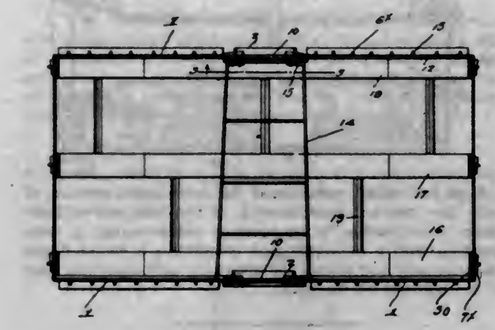
---



1,693,693. BUILDING-BLOCK MOLD. CARL J. DEXTER, La Fayette, Ind. Filed Sept. 21, 1927. Serial No. 220,988. 3 Claims. (Cl. 25—121.)

1. A mold for forming building blocks, comprising a bottom plate, spaced sides resting upon said plate, end plates adjustable toward and away from each other between the sides, said sides having grooves formed therein, ribs including bodies slidably fitted in the grooves and having heads projecting inwardly therefrom to provide mortar receiving grooves in the sides of a block.

1,693,694. METHOD OF WRAPPING CHEESE. CHARLES F. DOANE, Salem, Oreg. Filed June 10, 1927. Serial No. 197,823. 17 Claims. (Cl. 99—8.)

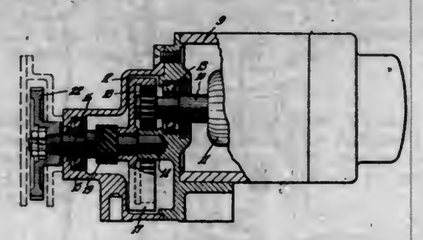


2. A method of packaging cheese which consists in progressively bringing successive portions of a protective covering or wrapper into contact with the surface of the cheese, and applying pressure and heat to said wrapper and cheese at the successively contacting portions thereof whereby air is expelled from between the wrapper and cheese and said wrapper and cheese cemented together.

15. A wrapped package of cheese having its ends entirely covered by separate pieces of wrapping material and a third piece of wrapping material applied directly to the remaining surfaces of the cheese, the contacting portions of said cheese and wrapping material being free of air pockets.

---

1,693,695. KNOCKDOWN TANK. ZACHARY T. ELLIS, Duncan, Okla. Filed Feb. 14, 1927. Serial No. 168,111. 6 Claims. (Cl. 220—5.)

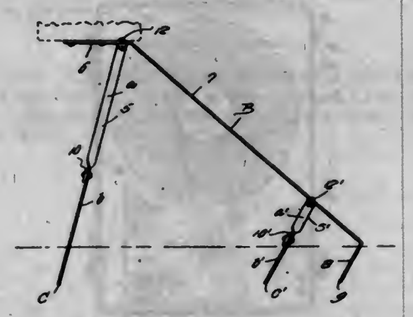


1. A knock-down device comprising a member having a stem and a channeled portion at one side of the stem, a sheet metal section having a resilient portion bent upon its major portion and tending to swing away from said major portion and disposed in said channeled portion of the member, and means cooperating with the stem for holding said resilient bent portion of the sheet section under tension in the channeled portion of said member, whereby the resiliency of the bent portion is utilized to maintain said holding means under pressure against the stem of the member.

---

1,693,696. GENERATOR ASSEMBLY FOR MOTORCYCLE ENGINES. CHARLES B. FRANKLIN, Springfield, Mass., assignor to Indian Motorcycle Company, a Corporation of Massachusetts. Filed Mar. 6, 1926. Serial No. 92,825. 1 Claim. (Cl. 290—1.)

In an electrical generating and distributing system for internal combustion engines of the type wherein a train of gearing is provided to enable said engine shaft to rotate a driven shaft at a slower speed than said engine shaft, the combination therewith of a generator assembly comprising a housing having contained therein an armature and its shaft, said slow speed driven shaft for operation by said engine shaft, and step-up gearing between said driven shaft and said armature shaft to rotate the latter at higher speed than said engine shaft, said step-up gearing comprising a relatively large internal gear on said driven shaft and a relatively small intermeshing pinion on said armature shaft, said driven shaft extending exteriorly of said housing and having fixed thereto a gear for meshing with said train of gearing from said engine shaft, a pinion fixed on said driven shaft adjacent said internal gear within said housing and a distributor shaft extending to within said housing and having a gear for operation by said pinion.



---

1,693,697. COMPOSITION OF MATTER FOR USE IN HONING RAZORS AND OTHER KNIVES. WILHELM HAFNER, Saarbrucken, Germany. Filed Oct. 12, 1927, Serial No. 225,850, and in Germany Oct. 14, 1926. 4 Claims. (Cl. 51—280.)

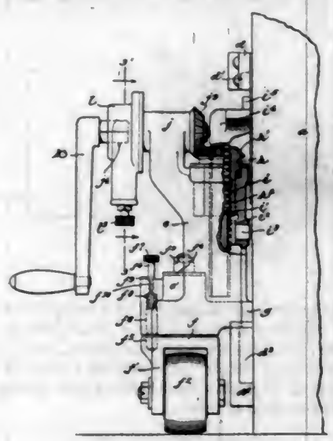
1. A composition of matter for honing, consisting of a mixture containing glue, glycerine, and powdered emery and tripoli.

---

1,693,698. MAIL-BOX POST. SAMUEL B. HALE, Buckley, Ill. Filed Oct. 18, 1927. Serial No. 226,955. 3 Claims. (Cl. 232—39.)

1. A mail box post structure of the class described comprising a front frame, a smaller rear frame, said frames being of an inverted V-shaped formation, a connecting member secured to the bights of said frames and inclining downwardly from the larger frame to the smaller frame.

---

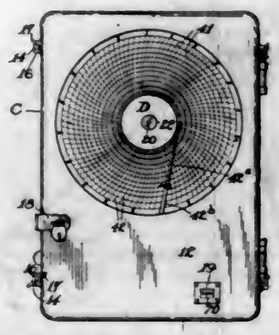


1,693,699. [WITHDRAWN.]

---

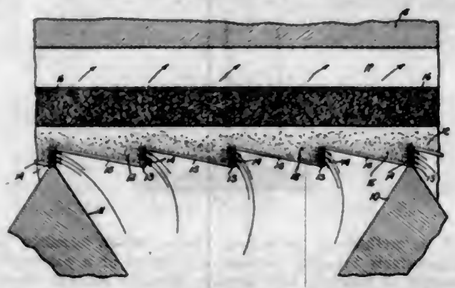
1,693,700. CONTAINER BOGIE. GEORGE MCCALL, Woodside, and JOSIAH E. REID, New York, N. Y., assignors to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 21, 1926. Serial No. 156,218. 9 Claims. (Cl. 254—7.)

1. In an attachment for unit containers, a housing, roller means mounted at the lower extremity thereof to



facilitate movement over surfaces, a lifting member mounted in the housing, means on the housing to engage cooperating means on the container to prevent substantial

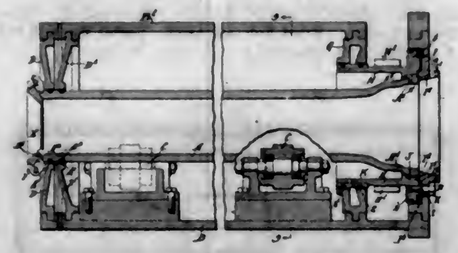
lateral movements thereof in any direction with respect to the lifting member, means on the lifting member to engage cooperating means on the container to support it, and means for lifting said lifting member.



---

1,693,701. RECORDING MEANS. HERBERT L. MERRICK, Passaic, N. J. Filed Jan. 10, 1925. Serial No. 1,504. 6 Claims. (Cl. 234—1.)

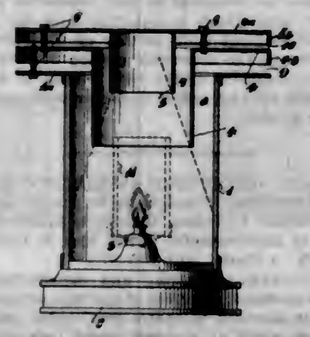
1. In chart recording means, a rotatable dial; means to intermittently rotate said dial; a scriber engaging with the dial to inscribe a line thereon to extend in the direction of travel of the dial during the rotation of the dial; a rotatable cam arranged with a successively stepped and progressively increased throw; a clock work operative to rotate said cam at a constant speed independent of the dial rotating means; a lever to one arm of which lever the scriber is connected and the other arm arranged with a cam follower to co-operate with the cam, and said lever normally urged in a direction to position the cam follower in engagement with the cam and the scriber toward the axis of the dial, and a clock movement upon the arbor of the hour hand on which the cam is mounted and adapted to actuate the cam to move the lever a predetermined distance at successive periods of time and the scriber laterally of the dial for the purpose specified.



1,693,702. FURNACE FOR TREATING ORES. FRANCIS M. SIMONDS, New York, N. Y. Filed Oct. 26, 1926. Serial No. 144,385. 5 Claims. (Cl. 266—21.)

1. A furnace having a hearth formed in sections each of which comprises a floor and a perforate confining wall at one end thereof forming an angle with said floor.

---

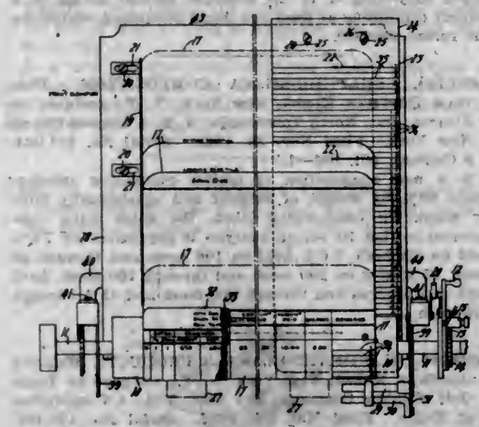


1,693,703. MOLD FOR CENTRIFUGAL PIPE CASTING. JOHN H. URBIG, Beverly, N. J., assignor to United States Cast Iron Pipe & Foundry Company, Burlington, N. J., a Corporation of New Jersey. Filed Nov. 6, 1926. Serial No. 146,612. 9 Claims. (Cl. 22—65.)

1. A bell ended metal mold for centrifugal casting of pipe, the external conformation of the bell end substantially corresponding to its internal conformation in combination with a separable part comprising a radial flange and core seat and means for attaching said separable part to the bell end of the mold.

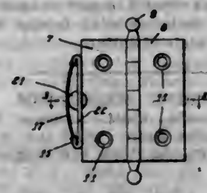
---

1,693,704. WINDPROOF LAMP. DEVEREUX JOHN GREGORY WATKINS, Lincoln, England. Filed July 26, 1927, Serial No. 208,527, and in Great Britain Aug. 31, 1926. 4 Claims. (Cl. 240—11.)



4. A lamp comprising an outer cylindrical casing with open top and closed base, a plurality of open-based cylinders assembled concentrically within the upper part of said outer casing, said cylinders being of proportionately decreasing diameters and lengths, a burner within the outer casing below the inner cylinders, outwardly projecting flanges at the top of the outer casing and inner cylinders, said flanges being spaced one over the other and means for enabling the spacing of said flanges to be accurately adjusted.

---



1,693,705. TYPEWRITING MACHINE. HARRISON O. BLAISDELL, Brooklyn, N. Y., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 18, 1925. Serial No. 69,761. 15 Claims. (Cl. 197—128.)

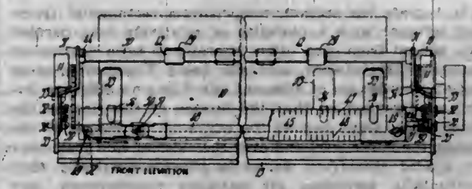
1. The combination with a typewriting machine, having a revoluble platen and a rear table at the introductory side of the platen for a work-sheet, of a plate mounted on the rear table and provided with corrugations line-space distances apart for gaging the trailing edge of the work-sheet when inserted around the platen.

---

1,693,706. SPRING LOCK. FRED L. BORCHERT, Rockford, Ill. Filed May 17, 1926. Serial No. 109,581. 3 Claims. (Cl. 16—144.)

1. A spring latch comprising a part shaped to fit against a hinge-leaf and to be retained in position by the fastening means therefor, and further shaped to carry a spring-pressed ball adapted to snap over an edge on the other hinge-leaf.

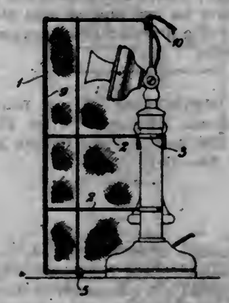
---



1,693,707. CLIPPER. ANTON DISHMAKER, Kewaunee, Wis. Filed Aug. 11, 1927. Serial No. 212,185. 1 Claim. (Cl. 30—11.)

A hedge clipper of the class described, comprising a channel bar having an elongated stationary blade at its outer end and spaced ears at its inner end, a pair of reciprocating members mounted in said channel bar, said members having cutting toothed blades extending laterally beyond the adjacent edges of said channel bar, means for slidably securing said members to said channel bar, a transversely disposed drive shaft mounted in the ears of said channel bar, means connecting the inner ends of said pitmen to apposite sides of said members to permit the use of both sides of the cutting blades, and means eccentrically connecting the inner ends of said pitmen to said drive shaft at diametrically opposite points whereby simultaneous reciprocating movement in opposite directions is imparted to the cutting blades to maintain them in balanced relation relative to each other.

---

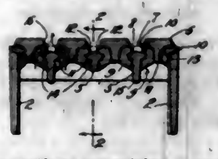


1,693,708. TYPEWRITING MACHINE. WILLIAM A. DONSON, Bridgeport, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 24, 1925. Serial No. 64,540. 14 Claims. (Cl. 197—138.)

1. The combination with a typewriting machine having a platen revolubly mounted in end plates of a platen-frame, of feed-rolls mounted upon a shaft running parallel with the platen axis, side arms supporting said shaft and rockably mounted on the platen-frame so as to be operable to move said rolls into or out of engagement with the platen, and means for maintaining said rolls in the operative or inoperative position, including a double-acting spring attached at one end to one of said arms, and means for attaching the other end of said spring to the platen-frame, said attaching means having provision for increasing the effective moment upon said supporting arm of the force of the spring beyond the amount directly due to the rocking of the supporting arm.

---

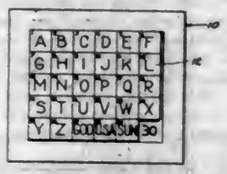
1,693,709. SCREEN FOR TELEPHONES OR THE LIKE. ERNEST LENNOX DUNAND, London, England. Filed Dec. 8, 1926, Serial No. 153,242, and in Great Britain June 18, 1926. 1 Claim. (Cl. 45—105.)



A screen for telephone instruments and other pedestal articles, comprising a fabric covered frame provided with a pair of horizontal parallel spacing arms of equal length disposed one above the other and both extending from a single vertical central frame member so as to be radial with respect to the pedestal, an integral U-shaped clip formed on the inner end of each of said arms for movably engaging the pedestal in such a manner as not to take the weight of the screen, and a horizontal member secured to the lower end of said central frame member and

extending in concentric relation to said pedestal, said horizontal member carrying a pair of rollers disposed one at each side of the aforesaid vertical central frame member so that the upper parts of the rollers are concealed by the screen.

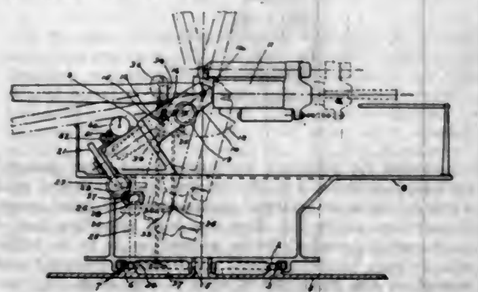
---



1,693,710. GRATE BAR. HENRY K. EILERS, Plainfield, N. J., assignor to Pyramid Iron Products Corporation, a Corporation of New York. Filed Mar. 16, 1927. Serial No. 175,767. 8 Claims. (Cl. 126—163.)

1. A grate bar section, comprising a rectangular frame cast integral with a plurality of relatively long parallel ribs, spaced from each other laterally to form continuous channels therebetween, said ribs being T-shaped in cross section, the flanges of adjacent ribs being on different levels and arranged so that the flanges of the ribs on the upper level extend beyond the edges of the flanges of the ribs on the lower level and over the sides of said frame but are spaced therefrom, so as to provide vertically then horizontally extending air passages therebetween, and lugs on the sides of said frame for supporting the individual grate bar section.

---



1,693,711. PUZZLE. EMIL FRIEDERICH LEWIS FRITZ, Chicago, Ill. Filed July 18, 1927. Serial No. 206,442. 4 Claims. (Cl. 273—132.)

1. A device of the class described, comprising a rectangular container having the inner surface thereof marked off in squares; a plurality of cubical blocks, each of a size adapted to cover one of said squares; there being less blocks than squares for permitting relative sliding movement of said blocks; letters and numbers in said squares; letters and numbers on one face of said blocks and corresponding letters of a plurality of languages on the other faces of said blocks.

---

1,693,712. GUN MOUNTING. JAMES BLACKLOCK HENDERSON, Blackheath, England. Filed Feb. 12, 1927, Serial No. 167,833, and in Great Britain Mar. 22, 1926. 9 Claims. (Cl. 89—37.)

1. The combination with a device mounted to be variously directed, of a support for the device including trunnions on two axes, and simultaneously operable interconnections adapted to be actuated to effect a displacement of said device about an axis to which the two trunnion axes are inclined.

---

1,693,713. PURIFICATION OF CRUDE ANTHRACENE. ALPHONS O. JAEGER, Crafton, Pa., assignor, by mesne assignments, to The Selden Research & Engineering Corporation, Pittsburgh, Pa., a Corporation of Delaware. Filed Jan. 16, 1928. Serial No. 247,260. 14 Claims. (Cl. 260—168.)

1. A method of purifying impure anthracene, which comprises subjecting it to the selective solvent action of a solvent containing at least one liquid compound containing the furane nucleus.

---

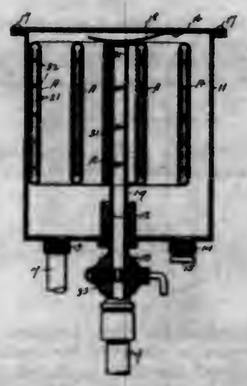
1,693,714. SULPHUR-SILICA COMPOSITION. WILLIAM HOFFMAN KOBBÉ, New York, N. Y., assignor to Fleuron, Inc., North Tonawanda, N. Y., a Corporation of New York. Filed Nov. 26, 1926. Serial No. 151,024. 9 Claims. (Cl. 106—1.)

9. A new composition of matter comprising substantially 50% by weight of sulphur and substantially 50% by weight of comminuted silica, the silica being comminuted so that its screen analysis is approximately 7.2% held on 80 mesh, 5.6% held on 100 mesh and through 80 mesh, 25% held on 200 mesh and through 100 mesh, 19% held on 320 mesh and through 200 mesh and 43% through 320 mesh.

---

1,693,715. HARDENED-PLASTER PRODUCT. WILLIAM HOFFMAN KOBBÉ, New York, N. Y., assignor to Texas Gulf Sulphur Company, Bay City, Tex., a Corporation of Texas. Filed Mar. 14, 1927. Serial No. 175,431. 4 Claims. (Cl. 154—45.9.)

1. An article of manufacture comprising dehydrated set gypsum impregnated either wholly or in part with sulfur.



---

1,693,716. PLASTER BOARD AND THE LIKE. WILLIAM HOFFMAN KOBBÉ, New York, N. Y., assignor to Texas Gulf Sulphur Company, Bay City, Tex., a Corporation of Texas. Filed Mar. 14, 1927. Serial No. 175,432. 2 Claims. (Cl. 154—45.9.)

1. A composition board comprising an interior including hardened plaster covered in part at least by fibrous material, the fibrous material being bonded to the interior of the board by crystals of sulfur.

---

1,693,717. FILTERING MECHANISM. CHARLES F. LIENESCH, Monrovia, Calif., assignor to Charles L. Stokes, Los Angeles, Calif. Filed Oct. 6, 1926. Serial No. 139,887. 5 Claims. (Cl. 210—165.)

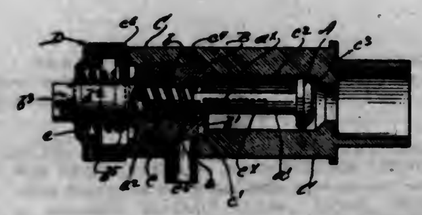
1. A filtering mechanism, comprising a casing having an inlet and an outlet port, a pipe in said outlet port extending upward in said casing and provided with a plurality of openings in one side only thereof, a flexible reticulated guard member bent to form a loop and having its ends secured to said pipe at each side of said openings, filter material in the form of a bag for enclosing said guard member, and a spring clip for securing the ends of said material to said pipe.

---

1,693,718. WATERPROOFING COMPOUND AND PROCESS OF MAKING THE SAME. EDWIN C. E. LORD, Washington, D. C. Filed Sept. 1, 1928. Serial No. 303,617. 3 Claims. (Cl. 134—15.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928, 370 O. G., 757.)

1. A new waterproofing compound which comprises a mixture of water gas tar and paraffin wax dissolved in coal tar naphtha, the mixture in liquid form and of a specific gravity of approximately 1.02.

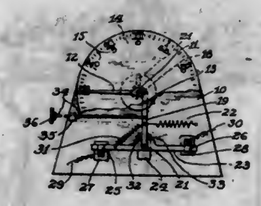
---



1,693,719. FLUID-MEASURING FAUCET. HARRY C. LYONS, Mount Vernon, N. Y. Filed May 4, 1925. Serial No. 27,681. 5 Claims. (Cl. 221—106.)

1. A measuring faucet comprising a casing provided with inlet and discharge ports, a shell rotatably positioned in said casing, a partition core removably positioned in and dividing said shell into two measuring compartments arranged and adapted to be brought alternately and simultaneously in communication with said inlet and discharge ports by a rotative movement of said shell and core, interacting means on said shell and core connecting the same together for simultaneous rotative movement while permitting said core to be removed independently from said shell, and means for imparting a rotative movement to said core and shell.

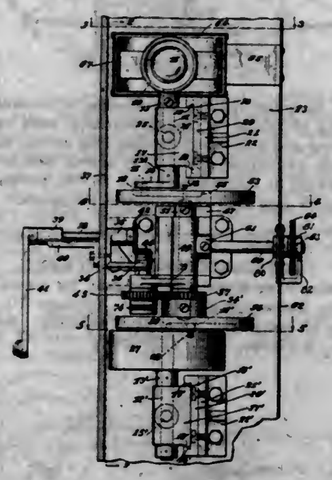
---



1,693,720. MEASURING FAUCET. HARRY C. LYONS, Mount Vernon, N. Y. Filed Dec. 23, 1924. Serial No. 757,609. 5 Claims. (Cl. 221—114.)

1. In a device of the character described, two valves, seats for said valves, one of said valves being rotatable, means for holding the other of said valves against rotation, screw-thread means directly connecting said valves and adapted when said rotatable valve is rotated to cause said valves to be successively and alternately moved axially.

---

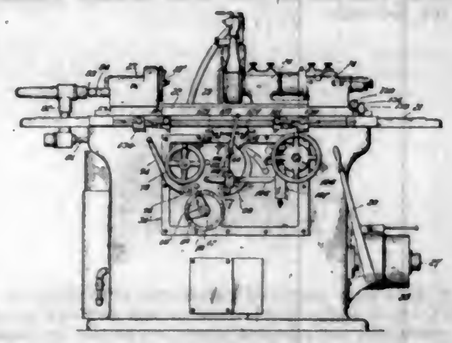


1,693,721. CLOCK-CONTROLLED SWITCH. HECTOR P. MACLAGAN, Oak Park, Ill., assignor to McIntosh Electrical Corporation, Chicago, Ill., a Corporation of Delaware. Filed Jan. 24, 1925. Serial No. 4,401. 9 Claims. (Cl. 200—38.)

2. In a time controlled switch, the combination of a clock driven staff, a disk carried by said staff and having a counterbore and releasing groove, mechanism for engaging said counterbore including a spring tending to move said mechanism to its released position, an electric switch, and connections between said switch and said mechanism to open said switch upon release of said mechanism, said mechanism comprising a pivotally supported lever having a pin for engaging said counterbore.

---

1,693,722. PANORAMIC MOTION-PICTURE CAMERA. WALTER J. MCINNIS, Stelton, N. J., assignor to Widescope Camera Company, Newark, N. J., a Corporation of New Jersey. Filed Aug. 26, 1925. Serial No. 52,491. 15 Claims. (Cl. 88—16.)

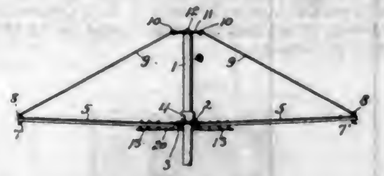


1. In a motion picture camera, in combination, a revoluble lens, means for completely revolving the lens and means whereby the speed of revolution of the lens will be varied during each revolution thereof while the revolving means maintains a uniform speed of revolution.

---

1,693,723. GRINDING MACHINE. RAYMOND C. MITCHELL, Springfield, Ohio, assignor by mesne assignments, to Barber-Colman Company, a Corporation of Illinois. Filed Aug. 8, 1921. Serial No. 490,479. Renewed Oct. 1, 1925. 9 Claims. (Cl. 51—165.)

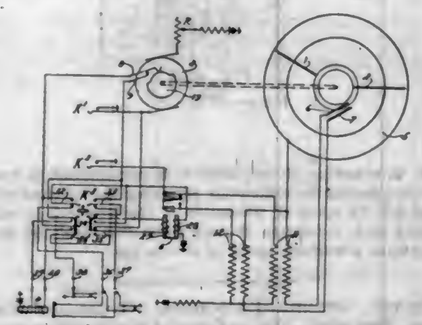
2. In a grinder, the combination of a slide-table, a grinding-wheelstand, cross-feed mechanism for the latter, having a shiftable part, automatic means for reciprocating



the table, said table reciprocating means having operative connections to actuate the cross-feed mechanism, a constantly-moving part and means operatable from said con-

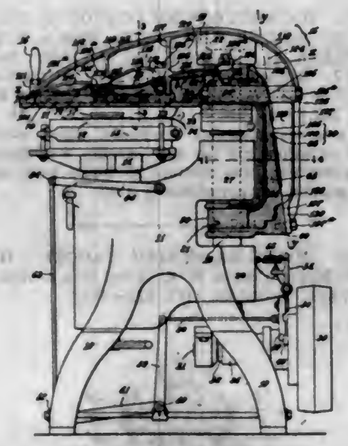
stantly moving part for actuating said cross-feed independently of table-reciprocation, said shiftable parts being movable to render idle either operating mechanism alternatively.

---



1,693,724. CARROUSEL-DRIVING MECHANISM. CHARLES E. MORRIS, Leavenworth, Kans. Filed July 26, 1926. Serial No. 124,936. 9 Claims. (Cl. 272—40.)

1. In a carrousel driving mechanism, a revoluble support having circularly arranged brackets, each having a lateral recess and a hole intersecting said recess, and a pin in said hole extending across said recess, and a driving wheel mounted in said recesses and having peripheral recesses in which said pins are respectively disposed.



---

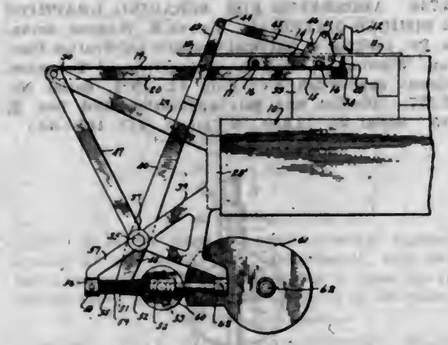
1,693,725. IMPULSE-TESTING EQUIPMENT. MARTIN L. NELSON, Park Ridge, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Oct. 18, 1924. Serial No. 744,528. 8 Claims. (Cl. 177—380.)

6. In a testing apparatus, a plurality of arms having free ends spaced a definite distance from each other, a ring adjacent and in like relation to said arms, means for rotating said arms at a constant speed, and means controlled by the device under test for alternately producing sparks between said arms and ring.

1,693,726. PRESS FOR CUTTING OR PUNCHING SHEET MATERIAL. JOHN ROGER OLIVER, Medfield, Mass., assignor to Reece Shoe Machinery Company, Boston, Mass., a Corporation of Maine. Filed July 30, 1927. Serial No. 209,497. 2 Claims. (Cl. 164—19.)

1. A power press of the clicker type for operating upon leather or other sheet material comprising the bed for supporting the material flatwise, mechanism to depress and raise the presser, and a presser laterally swingable to selected operative positions over the bed, and built up of upper and lower longitudinal components unitarily interconnected in longitudinal surface contact along a division surface proximate to the neutral axis of strain of the presser, the lower component consisting of a relatively light metal alloy of high surface hardness and tensile strength, and the upper component consisting of a relatively heavy metal of high rigidity and compressive strength, whereby such components mutually reinforce each other against the strains encountered in practical operation.

---



1,693,727. ACOUSTIC DIAPHRAGM. HERMAN G. PAPE, New York, N. Y. Filed Apr. 15, 1926. Serial No. 102,291. 14 Claims. (Cl. 179—181.)

1. The method of determining the shape and size of a diaphragm loading for a given type of magnet poles comprising dropping particles of magnetic material on said diaphragm and relatively rotating said diaphragm and said poles while said diaphragm is in the magnetic field of said poles.

1,693,728. MATERIAL-FEEDING DEVICE. THOMAS F. RAINSFORD, Detroit, Mich., assignor to Whitehead and Kales, Inc., River Rouge, Mich., a Corporation of Michigan. Filed June 22, 1925. Serial No. 38,949. 6 Claims. (Cl. 271—2.5.)

1. In a material feeding apparatus, a reciprocable carriage, a plurality of transversely arranged fingers carried by said carriage for frictionally engaging the material to be fed, and a plurality of rollers carried by said carriage and engaging the bottom surface of the material, said rollers corresponding in number to the fingers aforesaid.

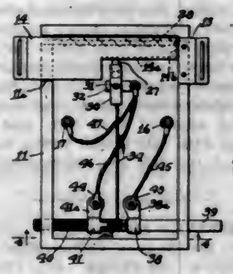
1,693,732. PRIMING APPARATUS. CHARLES LAWRENCE STOKES, Los Angeles, Calif. Filed Jan. 30, 1924. Serial No. 689,474. 16 Claims. (Cl. 123—180.)



7. In an internal combustion engine having an oil supply under pressure, the combination of a flexible diaphragm, means for subjecting the diaphragm on one side to the oil pressure and means for subjecting the other side of the diaphragm to the suction in the gas inlet for the engine.

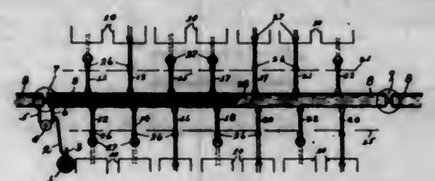
1,693,733. METHOD AND MEANS FOR APPLYING ENGINE EXPLOSION PRESSURE. CHARLES LAWRENCE STOKES, Los Angeles, Calif. Filed Oct. 15, 1924. Serial No. 743,818. 22 Claims. (Cl. 123—71.)

7. An internal combustion engine having a sleeve valve, a compression chamber and a carburetor in combination with means to pass a combustible mixture from the carburetor to the compression chamber, where the same is compressed at constant pressure, and thence in varying amounts to the interior of the sleeve valve.

1,693,734. SWITCHING MEANS FOR EFFECTING ELECTROTHERAPEUTIC TREATMENT. MELANCTHON R. WAGGONER, Cedar Rapids, Iowa, assignor to McIntosh Electrical Corporation, Chicago, Ill., a Corporation of Delaware. Filed June 29, 1923. Serial No. 648,427. 5 Claims. (Cl. 200—52.)

1. In a device of the class described, the combination of a casing, a bar pivotally mounted in said casing, said bar having an end bore, a stud slidably mounted in said bore and projecting therefrom, a spring in said bore tending to move said stud outwardly from said bar, an operating member movable substantially at right angles to said bar and having a surface in engagement with the outer end of said stud, an arm extending from said bar away from said stud, a first electric contact carried by the outer end of said arm, a second electric contact carried by said casing for engagement by said first contact, and means extending from said operating member for connecting said casing to a human body.

1,693,735. METHOD OF DECORATING GLASS SURFACES. KALMAN WARGA, New York, N. Y., assignor to Clarence W. Bickford and Mary Bickford, Osceola Mills, Pa. Filed Nov. 17, 1927. Serial No. 234,054. 4 Claims. (Cl. 49—81.)

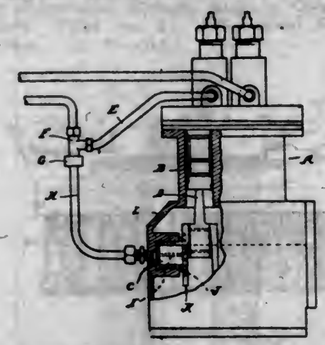


3. The method of fixing designs on glass objects, which consists in first, forming the design in color films containing each a mineral pigment and a vitreous binding material, said films being all fusible at the same temperature, second, placing the said design in a mold fitting the glass object, third, inserting the glass object in its hot state into said mold in contact with said design, and, fourth, fixing by heat said films to said glass object while the latter travels within the said mold through a leer.

1,693,736. APPARATUS FOR ABRADING GRAPHITE OR SIMILAR MATERIAL. LEWIS S. WATRES, Scranton, Pa., assignor to National Graphite Lubrication Company, Wilmington, Del., a Corporation of Delaware. Original application filed July 11, 1924, Serial No. 725,377. Divided and this application filed Dec. 5, 1925. Serial No. 73,310. 5 Claims. (Cl. 137—90.)

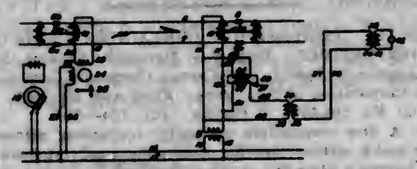
1. In combination a vibrating support, a chamber mounted thereon, a magazine tube extending into said chamber, an outlet from said tube into said chamber, abrasive material in said chamber, a rectilinear moving oscillator operated by the vibration of said chamber, said abrasive material being carried by said oscillator.

1,693,737. METHOD AND APPARATUS FOR LOCATING THE POINT OF ESCAPE OF A FLUID FROM CONCEALED PIPES. WILLIAM B. WELDON, Chicago, Ill., assignor to William S. Darley, Chicago, Ill. Filed June 23, 1927. Serial No. 200,990. 10 Claims. (Cl. 137—77.)

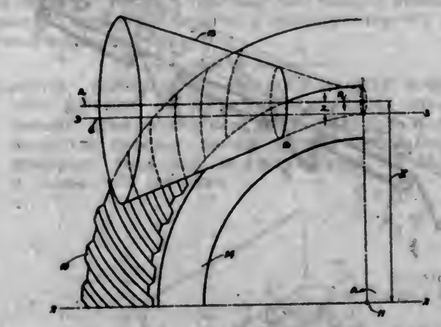


1. The method of locating the point of escape of fluid from a concealed pipe, which consists in first preventing free and unknown flow in said pipe; then introducing a detectable substance into said pipe; and then withdrawing fluid from said pipe at various distances from the point of introduction until two adjacent points are found to which said detectable substance has and has not penetrated.

1,693,738. OIL EXTRACTOR. THOMAS C. WHITEHEAD, Detroit, Mich. Filed July 23, 1923. Serial No. 653,235. 2 Claims. (Cl. 230—206.)



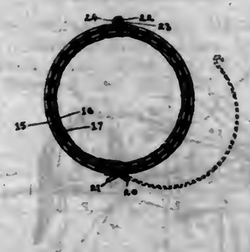
1. The combination with a gas pump comprising a crank shaft, and a casing for said shaft, said casing further forming a lubricant container, a gas conduit for the gas compressed by the pump, means connected to said conduit for collecting lubricant carried in suspension by said gas, a conduit leading from said collecting means into said casing, and a centrifugal thrower arranged within said casing upon said crank shaft and formed with a plu-



rality of radial passages communicating substantially axially of said shaft with said conduit, said passages being arranged to locate the outlet of at least one thereof always above the normal lubricant level in the crank case.

1,693,739. TRAIN-INDICATION SYSTEM. GILBERT C. WHITNEY, New York, N. Y. Filed May 29, 1925. Serial No. 33,731. 28 Claims. (Cl. 246—27.)

1. In a train indication system, a track circuit including a source of energy, a plurality of impedance bonds connected in parallel with the track rail part of said track circuit, and indication means inductively coupled to a circuit which is connected in parallel to said track circuit and synchronously responsive to the presence and movement of a train on said track circuit.



1,693,740. GEAR. ERNEST WILDHABER, Rochester, N. Y., assignor to Gleason Works, Rochester, N. Y., a Corporation of New York. Filed Aug. 6, 1926. Serial No. 127,618. 15 Claims. (Cl. 74—41.)

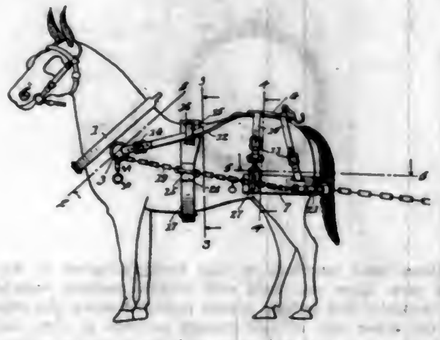
1. A tapered gear having longitudinally curved teeth and of constant pitch along a straight line offset from its axis.

1,693,741. LIQUID FILTER. ANDREW WUEST, Rochester, N. Y. Filed May 23, 1927. Serial No. 193,483. 3 Claims. (Cl. 210—154.)

1. A liquid filter having a filtering unit comprising an inner cylinder filtering screen, a filtering medium supported on said inner cylinder filtering screen, an outer cylinder filtering screen made up of a pair of trough sections downwardly projecting hook shaped interlocking lugs provided along one edge of one of said trough sections, upwardly projecting hook shaped interlocking lugs provided along the opposing edge of the other of said trough

sections, said interlocking lugs being adapted to hook into each other and hold said trough sections together on one side, and locking means provided along the edges on the other side of said trough sections to close said trough sections into the outer cylinder screen to embrace the filtering medium supported on said inner filtering screen.

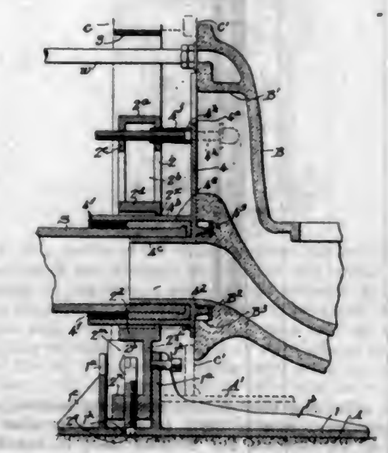
1,693,742. BUILDING CONSTRUCTION. ALBERT F. BEMIS, Newton, Mass., assignor to Bemis Industries, Inc., Boston, Mass., a Corporation of Delaware. Filed Dec. 2, 1925. Serial No. 72,674. 4 Claims. (Cl. 72—16.)



1. In a building construction, means for securing elongate juxtaposed tubular units to a frame member consisting of an elongate key member inset in the frame member and extending into slots in the ends of walls of the units and being slotted to engage said walls.

1,693,743. HARNESS. GEORGE BECKFORD, Pageton, W. Va., assignor of one-half to William E. Cook, Pageton, W. Va. Filed Dec. 9, 1927. Serial No. 238,805. 1 Claim. (Cl. 54—5.)

Harness for a draft animal comprising a collar, a belly band and a breeching strap, traces connected at one end



with the collar and at their other ends with the breeching strap and connected at points intermediate their ends with the belly band, draft members connected with the breeching strap, a spider ring adapted to rest upon the rump of the animal, billet straps connecting the spider ring with

the breeching strap at spaced intervals and back straps connected at one end with the spider ring and crossing each other over the back of the animal, and connected at their other ends with the collar at the forward ends of the traces, the inermediate portions of the back straps slidably engaging the belly band.

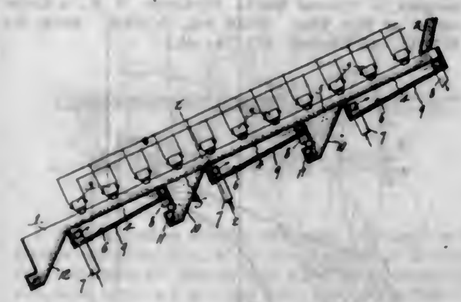
1,693,744. ADJUSTABLE SUPPORTING CHAIR FOR WALL CLOSETS, ETC. WILLIAM V. BULMAN, Philadelphia, Pa. Filed May 1, 1928. Serial No. 274,212. 20 Claims. (Cl. 4—252.)

1. A supporting chair for wall closets and the like, comprising a casting adapted to be mounted in the wall and having a horizontal bore; and a plate adjustably mounted on said casting and having a tubular caulking hub engaging the bore; means for securing the closet to said plate; and means for connecting the caulking hub to the outlet of said closet.

1,693,745. COMBINATION BRUSH, KNIFE, AND ROLLER. JAMES F. CONNOR, Renovo, Pa. Filed Oct. 12, 1927. Serial No. 225,739. 3 Claims. (Cl. 216—61.)

1. A device of the character described comprising a brush portion, a handle therefor having laterally extended portions, a creasing roller fixedly mounted in one of said extended portions, and a cutting disk mounted in the other of said extended portions, substantially as set forth.

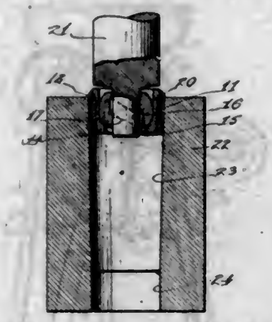


---

1,693,746. COMPOSITION CONTAINING CELLULOSE DERIVATIVES. JOSEPH G. DAVIDSON, Yonkers, N. Y., assignor to Carbide and Carbon Chemicals Corporation, a Corporation of New York. Filed Apr. 29, 1926. Serial No. 105,577. 5 Claims. (Cl. 124—79.)

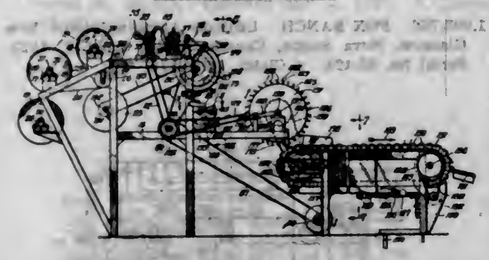
5. A new composition of matter containing nitrocellulose and a solvent therefor comprising a polyethylene glycol having a plurality of ether linkages.

---



1,693,747. DRIER. EDWARD P. DECKER, New York, N. Y. Filed Nov. 17, 1927. Serial No. 233,814. 6 Claims. (Cl. 209—238.)

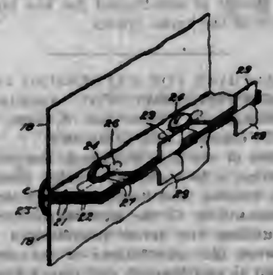
1. A drier comprising in combination, an inclined impervious drying support and an inclined screen forming a continuation of the support, means for vibrating said support and screen to impel the material vertically from the support and screen and cause it to gradually descend and pass the finer particles to the bottom, and means for applying heat to the support to dry the fines so that they will more easily pass through the screen.



1,693,748. METHOD OF MAKING BALL AND SOCKET JOINTS. WILLIAM J. FIEGEL and WINFIELD S. ENDERICK, Detroit, Mich., assignors to Bohn Aluminum and Brass Corporation, Detroit, Mich., a Corporation of Michigan. Filed Jan. 24, 1927. Serial No. 163,271. 13 Claims. (Cl. 29—49.5.)

1. In the method of manufacturing ball and socket joints, the steps which consist in shaping the babbitt of a babbitted shell to form a hemispherical recess, introducing a ball into said recess and closing in the end of the recess to confine the ball therein.

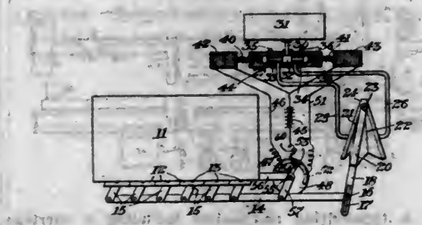
---



1,693,749. MACHINE FOR MAKING ABSORBENT ROLLS. EDWIN E. GLOMSTAD and JOHN A. WILLIAMSON, Neenah, Wis., assignors, by mesne assignments, to International Cellucotton Products Co., Chicago, Ill., a Corporation of Delaware. Filed May 21, 1927. Serial No. 193,358. 27 Claims. (Cl. 93—1.)

1. In a machine of the class described, the combination of means for rolling a relatively thin sheet of absorbent material upon itself to form a self-supporting roll and means for ironing the roll.

---



1,693,750. PANEL JOINT FOR AUTOMOBILE BODIES AND METHOD OF MAKING THE SAME. OTTO J. GROEHN, Grosse Pointe Park, Mich., assignor to Hudson Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 15, 1925. Serial No. 50,406. 3 Claims. (Cl. 296—29.)

1. In a panel joint for automobile bodies, in combination, panels having inturned edge flanges, a T-shaped molding having a flange inserted between the flanges of proximate panels and arms overlapping the marginal portions of the outer surfaces of the panels, said panel flanges and molding flange being formed respectively with slots disposed transverse to one another, and fastening means passing through said slots at their points of intersection and securing all of said flanges together.
